

Bachelor of Science in Public Health

Program learning outcomes: What Will I Learn?

1. Apply the principles of public health in addressing health issues that impact humankind.
2. Employ strategies to plan, implement and evaluate programs and policies designed to address public health issues.
3. Demonstrate multiple strategies of communication when addressing public health issues with diverse stakeholders.
4. Analyze the impact of determinants of health that contribute to disparities.
5. Analyze the interrelationship among policy, practice, systems, and population health.
6. Apply basic concepts, methods and tools of public health data collection in addressing population based needs.
7. Demonstrate critical thinking including the ability to analyze, synthesize, and evaluate public health and other types of data to make evidence based decisions.
8. Examine the practice of public health using legal, regulatory, and ethical frameworks.

This program does not have sufficient results to present outcomes data at the program level. Data represented on this site includes information on programs that have been in existence longer than 3 years, and have available direct and indirect learning outcomes data on at least 20 students, or unless otherwise specified by specialized accreditation to require reporting of all results less than $n = 20$.
