## Limitations

---

Information in this catalog is current as of June 2026 and is subject to change without advance notice.

### Changes In University Policies, Procedures, and Requirements

Excelsior University reserves the right to modify or revise the admission requirements of any program; degree and graduation requirements; courses, tuition, and fees; and other academic policies, procedures, and requirements. Generally, program modifications and revisions will not apply to currently admitted and enrolled students so long as they actively pursue their degree requirements. However, in the event that it is necessary to make program changes for admitted and enrolled students, every effort will be made to give notice. It is also the responsibility of students to keep themselves informed of the content of all notices concerning such changes.

# About Excelsior University

Excelsior University is an accredited, not-for-profit distance learning institution founded in 1971 focused on providing educational opportunity to adult learners. Excelsior contributes to the development of a diverse, educated society by valuing lifelong learning with an emphasis on serving individuals who are historically underrepresented by higher education. Excelsior meets students where they are—academically and geographically—removing obstacles to the educational goals of adult learners through affordable access to quality instruction and the assessment of learning. Our pillars include innovation, flexibility, academic excellence, and integrity.

Excelsior University is committed to providing a learning and working environment that is free from illegal discrimination based upon an individual's race, color, creed, religion, sex/gender (including pregnancy), sexual orientation, gender identity or transgender status, national origin, age, physical or mental disability (including medical conditions related to pregnancy and childbirth), genetic information, predisposition to diseases or carrier status, marital or familial status, criminal arrests and conviction status, military or veteran status, domestic violence victim status, known relationship or association with anyone in a protected class, or any other category protected by applicable federal, state, or local law. Illegal discrimination in any form will not be tolerated at the University.

Excelsior University is a Title IV-eligible institution offering federal student aid to students who qualify.

## Our Mission

Excelsior University provides educational opportunity to adult learners with an emphasis on those historically underrepresented in higher education. Excelsior meets students where they are—academically and geographically, offering quality instruction and the assessment of learning.

## Vision

Excelsior University provides access to quality higher education through innovative online learning, exceptional student experience, and innovation to be a model for addressing societal and workforce needs.

## Our Locations

Excelsior University is a not-for-profit university with a main campus in Albany, New York, and an educational site in St. Petersburg, Florida. Excelsior's academic programs are registered by New York State Education Department and/or have Florida-based licensing.

Licensed by the Commission for Independent Education, Florida Department of Education (License No. 12928). Additional information regarding this institution may be obtained by contacting the Commission at 325 West Gaines Street, Suite 1414, Tallahassee, FL 323099-0400, toll-free number: (888)-224-6684.

For additional state-based authorization information and licensure-related disclosures, visit: <https://www.excelsior.edu/about/transparency/state-authorization-disclosures/>.

## Accreditation

Excelsior University is an accredited institution and a member of the Middle States Commission on Higher Education ([www.msche.org](http://www.msche.org))(MSCHE or the Commission). Excelsior University's accreditation status is accreditation reaffirmed. The Commission's most recent action on the institution's accreditation status on June 23, 2022 was to reaffirm accreditation. MSCHE is recognized by the U.S. Secretary of Education to conduct accreditation and pre-accreditation (candidate status) activities for institutions of higher education including distance, correspondence education, and direct assessment programs offered at those institutions. The Commission's geographic area of accrediting activities is throughout the United States.

New York State Board of Regents—Recognized Programmatic Accreditation: Excelsior University's associate-level nursing programs are programmatically accredited by the New York State (NYS) Board of Regents, State Education Department Office of the Professions (the Regents). The U.S. Department of Education has recognized the Regents as a state agency for the approval of nursing education programs since 1969. More information about the NYS Board of Regents' Recognized Programmatic Accreditation may be helpful for students or graduates to present to a school they are attending or to an employer seeking more information about their Excelsior University nursing degree: <https://www.excelsior.edu/wp-content/uploads/2023/11/Excelsior-University-NYSED-BOR-Recognized-Programmatic-Accreditation.pdf>.

The RN to Bachelor of Science in Nursing, Master of Science in Nursing Leadership and Administration of Health Care Systems, Master of Science in Nursing Education, Master of Science in Nursing Informatics, RN to Master of Science in Nursing Leadership and Administration of Health Care Systems, RN to Master of Science in Nursing Education, and RN to Master of Science in Nursing Informatics programs at Excelsior University located in Albany, NY are accredited by the:

Accreditation Commission for Education in Nursing (ACEN)  
3390 Peachtree Road NE, Suite 1400 Atlanta, GA 30326  
(404) 975-5000

The most recent accreditation decision made by the ACEN Board of Commissioners for the baccalaureate and master's nursing programs is continuing accreditation.

View the public information disclosed by the ACEN regarding this program on the [ACEN website](#).

The ACEN is a specialized accrediting agency for nursing recognized by the U.S. Secretary of Education and the Council for Higher Education Accreditation (CHEA).

The Bachelor of Science in Electrical Engineering Technology is accredited by the Engineering Technology Accreditation Commission of ABET, <https://www.abet.org>, under the commission's General Criteria and Program Criteria for Electrical/Electronic(s) Engineering Technology and Similarly Named Programs. The Bachelor of Science in Nuclear Engineering Technology is accredited by the Engineering Technology Accreditation Commission of ABET, <https://www.abet.org>, under the commission's General Criteria and Program Criteria for Nuclear Engineering Technology and Similarly Named Programs. The Bachelor of Science in Information Technology is accredited by the Computing Accreditation Commission of ABET, <https://www.abet.org>, under the General Criteria and the Information Technology Program Criteria.

The School of Business, College of Liberal Arts and Sciences at Excelsior University received specialized accreditation for its business programs through the International Accreditation Council for Business Education (IACBE), located at 11960 Quivira Road in Overland Park, Kansas, USA. For a list of accredited programs, please view our [IACBE member status page](#).

## Recognition

The National Security Agency and the Department of Homeland Security designated Excelsior University as a National Center of Academic Excellence in Cyber Defense Education, through the academic year 2029.

Excelsior University has achieved institutional-level recognition for implementing Quality Matters™ standards for the design of online courses. Excelsior develops and evaluates its online courses based, in part, on the rigorous, research-based Quality Matters™ standards to ensure learner engagement and provide tools and information for successful learning.

## Social Justice, Equity, Diversity, and Inclusion at Excelsior University

Excelsior University values students, instructors, employees, and all members of its global community. Excelsior strives to integrate the dynamic concepts of [social justice, equity, diversity and inclusion](#) into all aspects of the University, including through the recruitment and retention of students, faculty, and staff who reflect the diversity of the society in which we live; curriculum development and academic advising; the delivery of services; the encouragement of volunteerism among our faculty, staff, and alums; and participation in educational programs, training, cultural events, celebrations, and other awareness activities. We facilitate an inclusive, equitable, and just experience for all types of learners in their development as the next generation of leaders, and we value the power of our diversity of perspectives, knowledge, skills, and experiences in the service and development of our students and workforce.

## Program Modality—Definitions

The following terms describe the types of program delivery offered by Excelsior University:

- ▶ **Asynchronous Online (100%)**—Fully online program offerings with no live sessions.
- ▶ **Synchronous Online (100%)**—Fully online program offerings with live synchronous sessions that students are required to attend.
- ▶ **Low-Residency (1–24% in person)**—Online program with face-to-face session(s) at a physical location 1 time per month, 1 time per term, or 1 time per year for applied learning activities.
- ▶ **Hybrid (25–99% in person)**—25–99% of the program sessions are offered in-person and the remaining are online.
- ▶ **Face-to-Face (100%)**—Program sessions occur in a physical location.

# Message from the President

Dear Student,

**Welcome to Excelsior University.** You have taken the courageous first step toward transforming your future by continuing your education journey.

This catalog showcases more than 45 degree and certificate programs across six fields of study, all designed to help you achieve your personal and professional goals. In a recent survey, 96% of Excelsior alumni reported career advancement within a year of graduation. **Now it is your turn.**

Whether you are beginning your degree program or nearing graduation, know that you are part of a dynamic community. At the 2025 Commencement ceremony, Excelsior celebrated a historic milestone with the graduation of our 200,000th student. From the first diploma awarded more than 50 years ago to today, Excelsior has never wavered in its mission to make the transformative power of education accessible to all.

**Excelsior now offers online, in-person, and hybrid educational experiences.** In October 2025, Excelsior's first standalone on-ground learning site opened in St. Petersburg, Florida. This new location offers immersive, in-person educational opportunities that complement the comprehensive online programs that Excelsior is known for. Beginning with hybrid degree programs in cybersecurity and electrical engineering technology and soon expanding into health care, Excelsior University St. Petersburg is a bold step forward in the commitment to flexibility, innovation, and student success. If you are not located in Florida, you could also explore a hybrid summer course that has on-location experiences in New York state's stunning Adirondack Park or a study abroad session.

**Wherever you live or study, have confidence in the journey.** Excelsior University has empowered thousands of learners like you to pursue and achieve their boldest ambitions. You join a global network of students and alumni in all 50 states and more than 20 countries—leaders, innovators, and changemakers positively impacting communities all over the world.

**Thank you for choosing Excelsior University.** Welcome to a community, more than 200,000 strong, that will support you well beyond your graduation day.

**You belong here.**

Sincerely,

A handwritten signature in black ink, appearing to read "David Schejbal". The signature is fluid and cursive, with a long horizontal stroke at the end.

David Schejbal, PhD  
President

## Spring 2026 Trimester

### SPRING 15-WEEK TERM

October 20	Registration opens.
January 2	Registration closes.
January 3	Late registration opens.
January 5	<b>Term begins.</b>
January 7	Late registration closes at 11:59 p.m. ET.
January 11	Last day for non-military and veteran students to cancel without financial penalty.
January 19	Last day for military students (active duty, in the Reserves, National Guard, or active-duty military family members) to cancel without financial penalty.
January 19	Last day for all students to cancel with no record on transcript.
January 26	Students will start being withdrawn for lack of participation.
April 12	Last day to withdraw or request extension.
April 19	<b>Term ends.</b>
April 24	Instructors submit grades.
April 27	Grades posted to MyExcelsior.

### SPRING I 8-WEEK TERM

October 20	Registration opens.
January 2	Registration closes.
January 3	Late registration opens.
January 5	<b>Term begins.</b>
January 7	Late registration closes at 11:59 p.m. ET.
January 11	Last day for non-military and veteran students to cancel without financial penalty.
January 19	Last day for military students (active duty, in the Reserves, National Guard, or active-duty military family members) to cancel without financial penalty.

Continued on next page

<b>January 19</b>	Last day for all students to cancel with no record on transcript.
<b>January 26</b>	Students will start being withdrawn for lack of participation.
<b>February 22</b>	Last day to withdraw or request extension.
<b>March 1</b>	<b>Term ends.</b>
<b>March 6</b>	Instructors submit grades.
<b>March 9</b>	Grades posted to MyExcelsior.

## SPRING II 8-WEEK TERM

<b>October 20</b>	Registration opens.
<b>February 27</b>	Registration closes.
<b>February 28</b>	Late registration opens.
<b>March 2</b>	<b>Term begins.</b>
<b>March 4</b>	Late registration closes at 11:59 p.m. ET.
<b>March 8</b>	Last day for non-military and veteran students to cancel without financial penalty.
<b>March 16</b>	Last day for military students (active duty, in the Reserves, National Guard, or active-duty military family members) to cancel without financial penalty.
<b>March 16</b>	Last day for all students to cancel with no record on transcript.
<b>March 23</b>	Students will start being withdrawn for lack of participation.
<b>April 19</b>	Last day to withdraw or request extension.
<b>April 26</b>	<b>Term ends.</b>
<b>May 1</b>	Instructors submit grades.
<b>May 4</b>	Grades posted to MyExcelsior.

## Summer 2026 Trimester

### SUMMER 15-WEEK TERM

<b>February 16</b>	Registration opens.
<b>May 1</b>	Registration closes.
<b>May 2</b>	Late registration opens.
<b>May 4</b>	<b>Term begins.</b>

# Admissions Requirements

Excelsior University accepts and reviews applications for admission into degree programs year round. The eligibility requirements for admission to all degree programs are listed below. Please be sure to contact our Admissions Office to assist with any questions and need for assistance. The application for admission identifies the required supporting documentation as well as details on all admission criteria. For further information, refer to the [Admission and Enrollment](#) and [Students Without High School Diploma](#) policies.

## Non-Nursing Degree Programs

### Undergraduate: Associate and Bachelor's Degree Programs

- ▶ No special admission requirements.
- ▶ Submission of acceptable proof of high school graduation. Acceptable documents include official high school transcript, GED, or equivalent (**hybrid program modality only**).

### Graduate Degree Programs and Graduate Certificate Programs

- ▶ The GRE or the GMAT are not required.
- ▶ Submission of an official transcript confirming the completion of a bachelor's degree or an equivalent graduate-level degree at an institutionally accredited college or university, or the international equivalent, at the time of attendance.

### Executive Master of Business Administration

In addition to the above graduate degree program requirements, applicants to the Executive Master of Business Administration program must demonstrate 5 or more years of professional experience and management of people and projects by submitting the following criterion:

- ▶ Curriculum vitae/resume detailing professional experience that includes job titles, responsibilities, and achievements.
- ▶ Two letters of recommendations, one of which must be from a supervisor or board member who can speak to your professional accomplishments, leadership skills, and managerial experience. The second letter must be from another professional reference that highlights your qualifications and suitability for the Executive Master of Business Administration program. For self-employed applicants, applications will be reviewed on a case-by-case basis. A letter of recommendation from a colleague or client who can attest to your professional interactions and managerial capabilities must be provided.
- ▶ One letter of intent that details your credentials and professional background; specific examples of your experience in overseeing people and managing projects; and how your professional experiences align with the objectives of the Executive Master of Business Administration program.

The Executive Master of Business Administration program has predetermined start dates. Check with Admissions for details.

## Doctor of Business Administration

- ▶ Submission of an official transcript confirming the completion of a master's degree at an institutionally accredited college or university, or the international equivalent, at the time of attendance.
- ▶ Five or more years of experience.
- ▶ Experience managing people and/or projects.
- ▶ Two letters of recommendation:
  - ▶ One from a supervisor or board member who can speak to your professional accomplishments, leadership skills, and managerial experience.
  - ▶ The second letter must be from another professional reference that highlights your qualifications and suitability for the Doctor of Business Administration program.
  - ▶ For self-employed applicants, applications will be reviewed on a case-by-case basis. A letter of recommendation from a colleague or client who can attest to your professional interactions and managerial capabilities must be provided.
- ▶ Curriculum vitae/resume detailing education history, work history, relevant projects (if applicable), publications and presentations (if applicable), teaching experience (if applicable), and grants and research experience (if applicable).
- ▶ One letter of intent that details your credentials and professional background, including specific examples of your experience in overseeing people and managing projects, and how your professional experiences align with the objectives of the Doctor of Business Administration program.
- ▶ Portfolio of one to two examples of professional writing work (can include work experience or previous academic work completed).

## Nursing Degree Programs

### Associate in Applied Science in Nursing Program

Excelsior University accepts applications for admission into the Associate in Applied Science in Nursing program from a limited number of states. Refer to the Excelsior University—[Associate in Applied Science in Nursing Application Requirements](#) section of the website or contact the Admissions Office for the most current information.

Students are responsible for reading and understanding the RN licensure requirements in the state they intend to practice in following graduation or if considering relocation. Students may consult with the College of Nursing and Health Sciences State Board representative and the [State Authorization and Disclosures webpage](#) for current information regarding eligibility for RN licensure in each state and U.S. jurisdiction.

Applicants to the Associate in Applied Science in Nursing program must meet the following eligibility qualifications:

- ▶ Hold and maintain an active and unencumbered LPN/LVN license in the U.S., hold current and active paramedic certification, or are in a certain classification of active-duty military, National

Continued on next page

Guard, or Reserves within a specific military occupation that is equivalent within scope of practice to LPN/LVN or paramedic ([learn more here](#)).

- ▶ Be employed in a setting that requires direct patient care, under the supervision of someone with a health care credential who evaluates the student's clinical practice. This includes the submission of a [Verification of Health Care Experience form](#), documenting the completion of 200 or more hours of employment within one year prior to the date of submission.
- ▶ Completed the Test of Essential Academic Skills (TEAS) and have achieved the minimum TEAS scores required. The TEAS score report from ATI must be completed within one year prior to the date of application. Review the [TEAS requirement details](#).

## Undergraduate: Bachelor of Science in Nursing Program

Excelsior University accepts applications for admission into the prelicensure Bachelor of Science in Nursing program from the state of Florida only.

Students are responsible for reading and understanding the RN licensure requirements in the state they intend to practice in following graduation or if considering relocation. Students may consult with the College of Nursing and Health Sciences State Board representative and the [State Authorization and Disclosures webpage](#) for current information regarding eligibility for RN licensure in each state and U.S. jurisdiction.

Applicants to the Bachelor of Science in Nursing program must meet the following eligibility qualifications:

- ▶ Achievement of an admissions grade point average (GPA) of 2.75 or higher in high school or previous undergraduate college-level work.
  - ▶ A high school GPA (or GED with minimum passing score in each subject area) will be used if applicant has fewer than 12 college credits.
  - ▶ A college GPA will be used if more than 13 college credits have been awarded.
- ▶ Submission of acceptable proof of high school graduation. Acceptable documents include official high school transcript, GED, or equivalent.
- ▶ Submission of all official transcripts from all institutionally accredited post-secondary institutions attended (e.g., colleges, community colleges, universities, etc.) and will be used in the calculation for admission GPA purposes. All earned grades will be used in the admissions GPA calculation even if the credit is not eligible for transfer. No earned grades will be omitted from the calculation of the cumulative GPA for admission purposes.
- ▶ Completion of the Test of Essential Academic Skills (TEAS) and have achieved the minimum TEAS scores required as listed below. TEAS score report must be submitted officially from ATI to Excelsior University within one year of the date of application. Failure to meet the composite score minimum benchmark, the science minimum benchmark, or exceeding the maximum number of attempts will render the applicant ineligible for admission to the nursing program:

Continued on next page

- ▶ Minimum composite score of 58.7.
- ▶ Minimum Science TEAS score of 75.
- ▶ Applicants are allowed a maximum of three attempts to take the TEAS exam within a six-month period, with mandatory remediation between each attempt.
- ▶ Submission of a background check (results must allow a student to participate in clinical at every contracted agency per Excelsior University and agency agreement).

Excelsior University is not responsible for determining the effect of any prior criminal history on an applicant's/ student's ability to be licensed as an RN in any U.S. state or jurisdiction. For information related to criminal history and RN licensure, contact the state board of nursing where licensure is desired).

- ▶ Submission of a drug screen (screen includes tetrahydrocannabinol [THC], a substance in marijuana).

## **Undergraduate: RN to Bachelor of Science in Nursing and RN to Master of Science in Nursing Degree Programs**

Applicants to the RN to Bachelor of Science in Nursing and RN-Master of Science in Nursing programs must meet the following eligibility qualifications:

- ▶ Hold and maintain an active and unencumbered U.S. Registered Nurse (RN) license or the equivalent.
- ▶ An [official transcript](#) showing the completion of an associate degree in nursing or an RN diploma education. The associate degree in nursing or RN diploma education must be earned from a program with specialty accreditation, accredited by one of the following accreditors: Middle States Commission on Higher Education, New England Association of Schools and Colleges, Higher Learning Commission, Northwest Commission on College and Universities, Southern Association of Colleges and Schools Commission on Colleges, Accrediting Commission for Schools Western Association of Schools and College (Senior and Junior Colleges), or a New York State (NYSED)-approved program.

Associate in Applied Science in Nursing graduates looking to pursue the BS in Nursing while preparing for the NCLEX can get a jumpstart with the Provisional Bachelor of Science Degree in Nursing option which is open to:

- ▶ Graduates of an RN diploma program of nursing.
- ▶ Graduates of an institutionally accredited college or university in the United States with an associate degree in nursing accredited by the one of the following accreditors: Middle States Commission on Higher Education, New England Association of Schools and Colleges, Higher Learning Commission, Northwest Commission on College and Universities, Southern Association of Colleges and Schools Commission on Colleges, Accrediting Commission for Schools Western Association of Schools and College (Senior and Junior Colleges).
- ▶ Students admitted under this option must obtain their Registered Nurse (RN) license within one year of admission to the program.

Continued on next page

## Graduate: Master of Science in Nursing Degree Programs

Applicants to the Master of Science in Nursing degree programs must meet the following eligibility qualifications:

- ▶ An official transcript showing completion of a bachelor's degree in nursing.
- ▶ An official transcript showing completion of a course in statistics at the undergraduate level.
- ▶ Hold and maintain an active and unencumbered U.S. Registered Nurse (RN) license or the equivalent.

## All Nursing Programs: Residents of California and Washington State

Excelsior University is not accepting applicants to the associate, bachelor's, RN to MS, or MS in Nursing degree programs who reside in California or the state of Washington.

## International Applicants

### English Language Proficiency

An international student must submit one of the following to show proof of English proficiency:

- ▶ TOEFL score of 79 and greater with a minimum of 15 on each section.
- ▶ IELTS score of 6.5 and greater with a minimum of 5.5 on each section.
- ▶ PTE score of 58 or greater.
- ▶ Duolingo score of 105 or higher.

Test scores are to be sent directly to Excelsior University, Office of the Registrar. Students must provide Excelsior University's name and full address at the time of taking the test. Scores submitted to Excelsior have a validity period of two years. Scores that are older than two years at the time of application will not be accepted. Reference the [English Language Proficiency policy](#) for further details and exceptions.

### International Credit and Credentials

Excelsior maintains a list of international schools for which transcripts may be submitted directly to the university, bypassing the required foreign credit evaluation agency. Students who wish to submit transcripts from post-secondary institutions outside the United States should check the [Transcripts Accepted Directly from Institutions Outside the U.S. and in U.S. Territories list](#) on the University's website. Transcripts from institutions on this list may be submitted directly following guidelines in the [Submission of Incoming Official Credit-Bearing Documentation policy](#).

If a prospective student does not find their institution(s) listed, they must use an approved evaluation agency when submitting transcripts or credentials. Students must forward their official documents to an evaluation agency recommended by Excelsior for evaluating and interpreting international

Continued on next page

credentials. Courses taken at postsecondary institutions without this status will not be considered for credit unless the credits fall under another acceptable credit source category.

### Non-Nursing Undergraduate Programs

Students who are seeking admission to an undergraduate program and have completed a degree or some college credits from international institutions should submit a Subject Analysis Transcript from Educational Credential Evaluators (ECE).

### Non-Nursing Graduate Programs

Students who are seeking admission to a graduate program and have completed a degree from an international institution should submit a Course-by-Course from World Education Services (WES) for consideration into Excelsior graduate programs.

### Nursing Programs

International students considering the nursing bachelor's and master's programs are welcome to apply. Admission to the associate degree in nursing program is not open to international students.

Nursing students with credentials from international nursing programs must submit their credentials to the Commission on Graduates of Foreign Nursing Schools (CGFNS) for evaluation to determine Registered Nurse or Licensed Practical Nurse equivalency.

### International Student Nursing Admissions Details

- ▶ Students need an equivalent U.S. Registered Nurse (RN) license.
- ▶ Students must be a graduate from an approved school of nursing in their home country of education and hold an active and unencumbered nursing license.
- ▶ If students are licensed in multiple jurisdictions and/or countries, all licenses must be active and unencumbered.
- ▶ All nursing school transcripts and licenses will be verified by contact with the primary source of the information. Students also need to apply to the:
  - ▶ Commission on Graduate of Foreign Nursing Schools (CGFNS)
  - ▶ New York Credential Verification Service (NYCVS)
  - ▶ New York State Education Department (NYSED). The NYSED only issues an official eligibility document to applicants directly and will not send the document to Excelsior University. Students must forward the unopened official eligibility document to Excelsior University by taking the official NYSED document in its sealed envelope and inserting the unopened envelope into an outer envelope and forward it to Excelsior University. Students must write their full name, permanent address, and date of birth on the inner envelope. All official documents must be in sealed envelopes from the original source. If Excelsior receives an opened document, it will be considered unofficial and will not be considered for eligibility or evaluation, and the opened document will be returned to the student. In this case, it becomes the student's responsibility to contact NYSED and request another unopened official copy to be supplied to Excelsior.

# University Learning Outcomes

To best prepare students to excel in their careers and life, Excelsior University adopted the Degree Qualification Profile's (DQP) five themes as the common University Learning Outcomes (ULOs) for our institution. The ULOs are aligned with general education courses, undergraduate degree major courses, and graduate degree major courses. This outcome alignment from the course level to the university level helps ensure consistency and embedded educational values from a competency and learning outcome perspective throughout all degree levels. In addition to the ULOs aligning and reflecting *Excelsior University's mission and values*, the ULOs reflect transferable skills essential for long-term success in a changing world as a common foundation throughout our curricula. Students will encounter the ULOs by meeting the requirements for general education and their program of study.

Excelsior's ULOs consist of:

1. Specialized/Industry Knowledge
2. Broad and Integrative Knowledge
3. Intellectual Skills
4. Applied and Collaborative Learning
5. Civic/Democratic and Global Learning

Each ULO has a brief, summary description and rich, differentiated detail of how students may demonstrate the ULO at multiple degree levels. For more information and to see the detailed content per ULO, visit <https://www.excelsior.edu/about/university-learning-outcomes>.

## Program Learning Outcomes

Aligned to the University Learning Outcomes, each program has specific learning outcomes that detail the knowledge, skills, and abilities students are expected to achieve upon completion of their degree programs. Depending on details or regulations associated with the program, these outcomes are referred to with different names throughout the catalog (e.g., **Program Learning Outcomes**, **Program (Student) Learning Outcomes**, **End-of-Program Student Learning Outcomes**).

Despite the different terminology, these outcomes are designed to provide a clear understanding of what students will learn and achieve in each program. Additionally, some programs may have Concentration Learning Outcomes for the concentrations in their programs and/or Program Educational Objectives, outlining what graduates are expected to attain within a few years after graduation.

# Important Information for All Students

Students are subject to the degree requirements in effect at the time of their admission or degree transfer. The faculty reserves the right to make changes in curricular requirements as necessary to reflect the current professional practice. Changes may affect admitted, enrolled, and prospective students. It is the student's responsibility to keep informed of such changes. The University will make every effort to inform students of changes as they occur. Current information about degree requirements is posted on the website.

Student progress within the degree program is based on the demonstration of proficiency, and is attainable through multiple flexible pathways, including Excelsior courses, credit for prior learning, and credit aggregation options to achieve degree completion. In this way, the program is customizable and tailored to each student's needs and learning style.

Excelsior student policies are important to each student's academic success. They include important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues.

When reviewing your desired program, it's the student's responsibility to review all the student policies to determine whether the program has any exceptions, limitations, or restrictions. This applies to all currently admitted and enrolled students, non-matriculated students taking courses, students in the application process, individuals using the OneTranscript® service, students currently in a withdrawn status, and graduates. All student policies are located at <https://www.excelsior.edu/policies/>.

## Time Limit for Academic Program Completion

Students must make continuous progress toward their academic goals. Students will be academically dismissed if they do not complete their program within the published program time limits of the [Time Limit for Academic Program Completion Policy and Procedure](#). A student attending full time could complete:

- ▶ An associate degree in two years;
- ▶ A bachelor's degree in four years; or
- ▶ A master's degree in two years

The time limit to degree program completion is cumulative for all Excelsior degree and certificate programs. If enrollment is not continuous, all previous enrollments will be considered for these time limits. Withdrawn students returning to a degree program are assigned an academic policy date and curriculum based on the Academic Policy Date and Degree Admission Procedure and are subject to the time limit on applicability of credit per the Grade Scale, GPA, and Credit Application Policy. Absences, granted by the Leave of Absence Policy, do not count toward the time limit to program completion cumulative time.

With the exception of the programs listed below, all other undergraduate degree programs must be completed in seven years and all other master's degree programs must be completed in five years. All certificates, undergraduate and graduate must be completed in two years.

Degree Program	School	Time Limit for Completion
Associate in Applied Science	Nursing	4.5 years
Bachelor of Science	Nursing	6 years
RN to MS	Nursing	10 years
Master of Science	Nursing	6 years
Executive Master of Business Administration	Business	1 year

In nursing degree programs, the time limit for program completion is cumulative between all undergraduate programs and between all graduate programs.

For the purposes of degree program time limits, the program time limit for the Executive Master of Business Administration and the online Master of Business Administration will be considered two separate programs with two different time limits.

## Time Limitations on Applicability of Transfer, Evaluated, and Excelsior Credit

Generally, there is no time limit on the use of credit from approved sources of credit to satisfy the requirements of an Excelsior University degree program. The only exception is the Information Literacy requirement, which must have been successfully taken within 10 years of the date the student becomes admitted to Excelsior. There are time restrictions on the acceptability of courses or examinations used to satisfy specific requirements of Excelsior's degree programs. The following degree programs have established a time-related restriction on the application of certain subject areas meeting degree requirements.

Degree Program	Subject Area	Time Limit Restriction
Bachelor of Science in Computer Science	Major Core courses, Concentration courses	5 years
Bachelor of Science in Cybersecurity	Major Core courses, Concentration courses	5 years
Bachelor of Science in Electrical Engineering Technology	Computer, Electrical (not AC/DC), Electronics	10 years

Continued on next page

Degree Program	Subject Area	Time Limit Restriction
Bachelor of Science in Information Technology	Information Technology Component	5 years
Bachelor of Science in Mechanical Engineering Technology	General Chemistry, Major Core courses, Concentration courses	10 years
Bachelor of Science in Nuclear Engineering Technology	Calculus I, Calculus II, Natural Science, Computers, Nuclear Engineering Technology, Electrical (not AC/DC), Electronics	10 years
Bachelor of Science in Liberal Arts with a concentration in Logistics Operations Management	Concentration courses	15 years
Associate in Applied Science in Nursing	Human Anatomy and Physiology core requirement Microbiology	5 years
	All Nursing/Major Core	<p><b>Eligible Credit:</b> Excelsior courses completed since 2020 and no more than 5 years prior to the academic policy date, C graded or higher are eligible.</p> <p><b>Ineligible Credit:</b> Previously completed Excelsior College Exams, Nursing Theory Conference Exams (NTCX), awarded waivers and pre-2020 Excelsior courses, and courses completed more than 5 years prior to the academic policy date are not eligible.</p>

Degree Program	Subject Area	Time Limit Restriction
<b>Bachelor of Science in Nursing Prelicensure</b>	Human Anatomy and Physiology Lecture and Lab, Pathophysiology, General Chemistry, Microbiology Lecture and Lab, All Nursing Major Core	5 years
<b>RN to Bachelor of Science in Nursing</b>	All Nursing Component/Major Core	5 years
<b>Master of Science in Nursing Education</b>	All Nursing Component/Major Core	5 years
<b>Master of Science in Nursing Leadership and Administration of Health Care Systems</b>	All Nursing Component/Major Core	5 years
<b>Master of Science in Nursing Informatics</b>	All Nursing Component/Major Core	5 years
<b>All dual degree programs in nursing</b>	All Nursing Component/Major Core	5 years
<b>Bachelor of Science in Business</b>	Business component courses	15 years
<b>Bachelor of Science in Health Care Management</b>	Professional Business core	20 years
<b>All non-nursing graduate-level degrees</b>	All credits applied toward the degree	5 years

## Graduation Requirements

The information on pages 26 to 31 applies to all Excelsior University degree programs, except for the following:

**Associate in Applied Science in Administrative Management Studies, Associate in Science in Criminal Justice, Associate in Science in Health Sciences, Associate in Science in Liberal Arts, Bachelor of Professional Studies Business and Management, Bachelor of Science Business, Bachelor of Science in Criminal Justice, Bachelor of Science in Health Sciences, Bachelor of Science in Liberal Arts, Bachelor of Science in National Security, Bachelor of Science in Psychology, and the Bachelor of Science in Public Health.**

For requirements applicable to the above listed degree programs, refer to the **Graduation Requirements for Specified Programs** section, starting on [page 32](#).

Excelsior University offers six types of degrees that require the minimum criteria outlined below. Individual programs may require additional hours to be completed in specific areas.

The chart below is specific to all degrees **except** for Master of Science in Health Care Administration.

Degree Program	Minimum Total Program Credits	Minimum Liberal Arts and Sciences Credits	Minimum University Credits	Minimum General Education Credits	Minimum Upper-Level Credits	Minimum Concentration Credits	Minimum Elective Credits	Minimum Prerequisite Credits
Associate in Science (AS)	60	30	4	21	-	0 or 9	Variable	Variable
Associate in Applied Science (AAS)	60	20	4	21	-	0 or 9	Variable	Variable
Bachelor of Science (BS)	120	60	4	33	30	0 or 15	Variable	Variable
Bachelor of Science in Nursing (BS in Nursing)	120	60	4	33	30	0	Variable	Variable
Bachelor of Professional Studies (BPS)	120	30	4	33	30	0 or 15	Variable	Variable
Master of Science (MS)	30	-	-	-	-	0 or 9	Variable	Variable

## Total Program Credits

A minimum total of 60 credits is required for associate degrees. A minimum total of 120 credits is required for bachelor's degrees. A minimum total of 30 credit is required for a master's degree. Individual degree programs may require additional credit hours to be completed in specific areas.

## Overall GPA Requirements

Excelsior requires an overall 2.0 GPA for completion of an undergraduate degree and an overall 3.0 GPA for completion of a graduate degree and a graduate certificate. Individual degree programs may require a minimum GPA in the major to graduate. Individual degree programs may require a minimum major GPA throughout their degree program, and some degree programs may have individual grade requirements for specific degree requirements. Please refer to the Grade Scale, GPA, and Credit Application policy and procedure for additional information and specific catalog pages for individual degree information.

## General Education and University Requirements

Consistent with Excelsior's mission and vision, Excelsior University students must complete two University-required courses and meet additional general education requirements in order to complete their degrees. The University requirements and general education requirements support students' academic success by providing them with essential foundational skills and exposing them to multiple perspectives on the world.

Excelsior's University and general education requirements are designed to highlight important transferable skills that are essential to students' long-term success in a changing world. All Excelsior University undergraduate students are required to complete a series of core general education and distribution requirements in order to help gain these skills. Students will be assessed by the University in a variety of ways, including skills and abilities acquired prior to admission at Excelsior University, satisfaction of requirements through transfer credit, and during coursework at Excelsior.

## University Requirements

Excelsior requires students in all undergraduate degree programs to complete two University requirements (4 credits) as follows.

University Requirements	
Information Literacy	1 credit
Cornerstone Course	3 credits
<b>TOTAL</b>	<b>4 credits</b>

Continued on next page

## Information Literacy

Information literacy is the ability to find, evaluate, interpret, and use information legally, ethically, and effectively. This course introduces students to important knowledge and academic skills in the areas of technological and cyber literacy, the academic knowledge-creation process, library and internet research, source evaluation, reading and processing information, and writing with sources. All undergraduate students must meet the information literacy requirement with the first 13 semester hours attempted. Students must receive a 'C' or better in the course to satisfy their University requirements.

## Cornerstone Course

The purpose of the Cornerstone course is to provide students with the foundational skills and resources for academic and career success and assure a “smart start” to the Excelsior University academic experience. All undergraduate students must complete the Cornerstone course in their first term of credit-bearing activity at Excelsior University. Students must receive a 'C' or better in the course to satisfy their University requirements.

## General Education Requirements

Excelsior University requires a minimum of 21 semester hours at the associate level and 33 semester hours at the bachelor's level. The minimum credit distribution requirements for Excelsior University undergraduate students are depicted in the following table:

Minimum General Education Credit Distribution Requirements for Undergraduate Degrees		
Distribution Requirements	Associate	Bachelor's
Humanities	6 credits	9 credits
▶ <i>Including Ethics</i>	3 credits	3 credits
Social Sciences and History	6 credits	9 credits
Natural Sciences and Mathematics	6 credits	9 credits
Written English	3 credits	6 credits
<b>TOTAL</b>	<b>21 credits</b>	<b>33 credits</b>

Students must receive a 'C' or better in courses to satisfy their general education requirements at Excelsior. This includes students who transfer in credit to satisfy general education requirements. Refer to the [General Education Policy and Procedures policy](#) for additional information.

Certain general education courses are specifically required by different programs and will be counted toward the general education core. Reference the individual degree program section for the specific

Continued on next page

requirements within each program, including 1) specific courses that may be required for degree completion, 2) minimum grades accepted for credit, and 3) and additional requirements that may need to be met. See below for details on the fields of knowledge that help satisfy the general education distribution requirements.

## Humanities and Ethics

The humanities focus on the expression and interpretation of the human experience. Through aesthetic appreciation and the development of knowledge and skills in critical thinking and problem solving, these courses examine the human environment with particular attention to diverse heritage, traditions, and cultures. Relevant humanities discipline areas include art, music, literature, foreign language, philosophy, religion, speech, or a subject area other than writing.

Ethics are the principles that guide human behavior and are a cornerstone of every field and profession. Employers need workers who can find innovative, ethical, and practical solutions to a wide variety of problems. In ethics courses and examinations, students learn to reflect and analyze positions and issues from a variety of ethical perspectives. Subject areas that meet the ethics requirement include, but are not limited to, classical or contemporary ethical theory and philosophy, ethics within a broad religious or cultural tradition, and ethical and moral reasoning.

## Social Sciences and History

The social sciences and history involve the study of individuals and societies and the processes individuals use to order and understand their world. The social sciences focus on theories that explain verifiable phenomena of individual and group human behavior using the scientific method. History is the systematic study of people and events in the past. Relevant discipline areas include anthropology, criminal justice (theory-based, not applied criminal justice), economics, geography, government, history, political science, psychology, and sociology.

## Natural Sciences and Mathematics

The natural sciences and mathematics are those branches of science that examine the natural world through scientific methods using qualitative and quantitative data. Relevant discipline areas for natural sciences include astronomy, biology, chemistry, earth science, and physics. For mathematics, relevant disciplines include algebra, geometry, analysis (which includes calculus), and applied mathematics (which includes probability and statistics). At least 3 semester hours in natural sciences and 3 semester hours in mathematics are required for all undergraduate degrees.

- ▶ Arithmetic courses and courses that have been designated as developmental or remedial cannot be used to meet the mathematics requirement.
- ▶ No more than three courses of mathematics credit below the level of calculus may be applied to any degree. Representative titles of courses below the level of calculus include College Math, College Algebra, Elementary Functions, Modern Math, Fundamentals of Algebra, Trigonometry, and Precalculus.

Continued on next page

- ▶ No more than one course or examination may be applied that is:
  - ▶ Terminal in nature with no prerequisites beyond the level of arithmetic;
  - ▶ Intended for students outside of science and mathematics; or
  - ▶ A mathematics appreciation course.

## Written English

Writing classes help students to hone their communication abilities, preparing them for both future academic study and communication in the workplace. The first part of Excelsior University's written English requirement focuses on expository writing: writing to describe, explain, or make an argument. This requirement is met through an introductory composition course. For the second part of the written English requirement, students continue to study expository writing at a more advanced level, typically in an intermediate or advanced composition course. Students in some majors (e.g., technology) may have more specific requirements for the second half of the written English requirement as determined by the faculty in their school.

A maximum of two courses that are 3–4 semester-hours or three courses that are quarter hours in English composition/freshman English courses will apply toward degree requirements. Courses or examinations used to fulfill the written English requirement may not be used to satisfy the Humanities distribution.

- ▶ **Associate:** 3 semester hours in expository writing within first 13 semester hours.
- ▶ **Bachelor's:** 6 semester hours, 3 semester hours in expository writing within first 13 semester hours and 3 semester hours in applied writing or writing within the discipline.

## Liberal Arts and Sciences

In addition to Excelsior's general education curriculum, all Excelsior undergraduate degrees include a breadth and depth of study in the liberal arts and sciences. The liberal arts and sciences are those areas of study classified as humanities, social sciences, history, natural sciences, and mathematics. The Associate in Applied Science (AAS) degree is required to have a minimum of 20 credits in the liberal arts and sciences. Associate in Science (AS) and Bachelor of Professional Studies (BPS) degrees are required to have a minimum of 30 credits, and Bachelor of Science (BS) degrees are required to have a minimum of 60 credits.

## Upper-Level Requirements

All bachelor's degree programs require a minimum of 30 hours to be completed at the upper level. Excelsior courses that are designated at the 300–400 level are considered to be upper level. Typically, external courses must be from 4-year colleges and universities offered in the junior or senior level to be considered upper-level. The acceptance of coursework toward the upper-level requirement is subject to official evaluation review.

Continued on next page

## Major Core Requirements

All Excelsior University degrees require a specific area of academic focus within a particular field or discipline to meet the major core requirements. It includes a structured program of coursework that includes specific courses or subject areas.

## Concentration Requirements

Some Excelsior University degree programs include the choice of a concentration that provides a focused area of study within the academic major. It includes specialized coursework and provides in-depth knowledge and skills of a particular subject as related to the major. The minimum concentration hours can vary from 9–15 hours depending on the degree program.

## Elective Requirements

Individual degree programs may require additional elective requirements. Elective courses apply toward degree requirements as choices that are beyond the specified required sequence of courses. Some of these elective courses must be in specific areas such as arts and sciences courses.

## Prerequisites to the Major Core Requirements

Individual degree programs may require certain requirements to be completed prior to the major core requirements. Reference the individual degree program section for further details.

## Required Excelsior University Courses

Individual degree programs may require additional requirements to be completed at Excelsior University. External coursework completed and submitted to Excelsior University prior to a student's admission date will be considered for transfer credit. Reference the individual degree program section for further details.

## Capstone Requirement

The Capstone course is designed to bring together the student's cumulative knowledge and skills to demonstrate mastery of the learning outcomes for the degree program. Through a mixture of discussion, presentations, and written analysis, students will apply their previous learning in new ways, both analyzing and synthesizing fresh perspectives on their learning. A minimum grade of C is required for all associate and bachelor's degrees. Reference the individual master's degree programs for minimum grade requirements.

## Graduation Requirements for Specified Programs, rev. June 2026

The requirements on pages 32 to 39 are specific to these degree programs:

Associate in Applied Science in Administrative/Management Studies

Associate in Science in Criminal Justice

Associate in Science in Health Sciences

Associate in Science in Liberal Arts

Bachelor of Professional Studies in Business and Management

Bachelor of Science in Business

Bachelor of Science in Criminal Justice

Bachelor of Science in Health Sciences

Bachelor of Science in Liberal Arts

Bachelor of Science in National Security

Bachelor of Science in Psychology

Bachelor of Science in Public Health

Requirements for all other degree programs can be found in  
the Graduation Requirements section on pages 25 to 31.

Excelsior University offers six types of degrees that require the minimum criteria outlined below. Individual programs may require additional hours to be completed in specific areas.

The chart below is specific to the following degrees: **Associate in Applied Science in Administrative Management Studies, Associate in Science in Criminal Justice, Associate in Science in Health Sciences, Associate in Science in Liberal Arts, Bachelor of Professional Studies Business and Management, Bachelor of Science Business, Bachelor of Science in Criminal Justice, Bachelor of Science in Health Sciences, Bachelor of Science in Liberal Arts, Bachelor of Science in National Security, Bachelor of Science in Psychology, and the Bachelor of Science in Public Health.**

Degree Program	Minimum Total Program Credits	Minimum Liberal Arts and Sciences Credits	Minimum University Credits	Minimum General Education Credits	Minimum Upper-Level Credits	Minimum Concentration Credits	Minimum Elective Credits	Minimum Prerequisite Credits
Associate in Science (AS)	60	30	1	18	-	0 or 9	Variable	Variable
Associate in Applied Science (AAS)	60	20	1	18	-	0 or 9	Variable	Variable
Bachelor of Science (BS)	120	60	1	30	30	0 or 15	Variable	Variable
Bachelor of Science in Nursing (BS in Nursing)	120	60	1	30	30	0	Variable	Variable
Bachelor of Professional Studies (BPS)	120	30	1	30	30	0 or 15	Variable	Variable
Master of Science (MS)	30	-	-	-	-	0 or 9	Variable	Variable

Refer to the chart on [page 26](#) for the minimum criteria required by all other degree programs not listed above.

## Total Program Credits

A minimum total of 60 credits is required for associate degrees. A minimum total of 120 credits is required for bachelor's degrees. A minimum total of 30 credit is required for a master's degree. Individual degree programs may require additional credit hours to be completed in specific areas.

## Overall GPA Requirements

Excelsior requires an overall 2.0 GPA for completion of an undergraduate degree and an overall 3.0 GPA for completion of a graduate degree and a graduate certificate. Individual degree programs may require a minimum GPA in the major to graduate. Individual degree programs may require a minimum major GPA throughout their degree program, and some degree programs may have individual grade requirements for specific degree requirements. Please refer to the Grade Scale, GPA, and Credit Application policy and procedure for additional information and specific catalog pages for individual degree information.

## General Education and University Requirements

Consistent with Excelsior's mission and vision, Excelsior University students must complete **three** University-required courses and meet additional general education requirements in order to complete their degrees. The University requirements and general education requirements support students' academic success by providing them with essential foundational skills and exposing them to multiple perspectives on the world.

Excelsior's University and general education requirements are designed to highlight important transferable skills that are essential to students' long-term success in a changing world. All Excelsior University undergraduate students are required to complete a series of core general education and distribution requirements in order to help gain these skills. Students will be assessed by the University in a variety of ways, including skills and abilities acquired prior to admission at Excelsior University, satisfaction of requirements through transfer credit, and during coursework at Excelsior.

## University Requirement

Excelsior requires students in all undergraduate degree programs to complete a University requirement (1 credit) as follows.

University Requirements	
Information Literacy	1 credit
<b>TOTAL</b>	<b>1 credit</b>

Continued on next page

## Information Literacy

Information literacy is the ability to find, evaluate, interpret, and use information legally, ethically, and effectively. This course introduces students to important knowledge and academic skills in the areas of technological and cyber literacy, the academic knowledge-creation process, library and internet research, source evaluation, reading and processing information, and writing with sources. Undergraduate students of the listed programs must meet the information literacy requirement with the first 13 semester hours attempted. Students must receive a 'C' or better in the course to satisfy their University requirement.

## General Education Requirements

Excelsior University requires a minimum of 18 semester hours at the associate level and 30 semester hours at the bachelor's level for the specified programs. The minimum credit distribution requirements for Excelsior University undergraduate students of these programs are depicted in the following table:

Minimum General Education Credit Distribution Requirements for Undergraduate Degrees		
Distribution Requirements	Associate	Bachelor's
Humanities ▶ <i>Including Ethics</i>	3 credits	6 credits 3 credits
Social Sciences and History ▶ <i>Including Cornerstone</i>	6 credits 3 credits	9 credits 3 credits
Natural Sciences and Mathematics	6 credits	9 credits
Written English	3 credits	6 credits
<b>TOTAL</b>	<b>18 credits</b>	<b>30 credits</b>

Students must receive a 'C' or better in courses to satisfy their general education requirements at Excelsior. This includes students who transfer in credit to satisfy general education requirements.

Continued on next page

Certain general education courses are specifically required by different programs and will be counted toward the general education core. Reference the individual degree program section for the specific requirements within each program, including 1) specific courses that may be required for degree completion, 2) minimum grades accepted for credit, and 3) and additional requirements that may need to be met. Degree programs may require different general education requirements depending on curriculum and student academic policy date.

See below for details on the fields of knowledge that help satisfy the general education distribution requirements.

## Social Sciences and History

The social sciences and history involve the study of individuals and societies and the processes individuals use to order and understand their world. The social sciences focus on theories that explain verifiable phenomena of individual and group human behavior using the scientific method. History is the systematic study of people and events in the past. Relevant discipline areas include anthropology, criminal justice (theory-based, not applied criminal justice), economics, geography, government, history, political science, psychology, and sociology.

### Cornerstone Course (Social Science)

Within the Social Sciences distribution requirement, all students must take the 3-credit Cornerstone course. The Cornerstone course draws on interdisciplinary social science topics, including psychology and sociology, to orient students to Excelsior University, promote student-success skills, and explore contemporary social and political topics. It provides students with the foundational skills and resources for academic and career success and assures a “smart start” to the Excelsior University academic experience. Undergraduate students must complete the Cornerstone course in their first term of credit-bearing activity at Excelsior University. Students must receive a ‘C’ or better in the course to satisfy the General Education requirements at Excelsior.

## Humanities and Ethics

The humanities focus on the expression and interpretation of the human experience. Through aesthetic appreciation and the development of knowledge and skills in critical thinking and problem solving, these courses examine the human environment with particular attention to diverse heritage, traditions, and cultures. Relevant humanities discipline areas include art, music, literature, foreign language, philosophy, religion, speech, or a subject area other than writing.

Ethics are the principles that guide human behavior and are a cornerstone of every field and profession. Employers need workers who can find innovative, ethical, and practical solutions to a wide variety of problems. In ethics courses and examinations students learn to reflect and analyze positions and issues from a variety of ethical perspectives.

## Mathematics and Natural Sciences

The natural sciences and mathematics are those branches of science that examine the natural world through scientific methods using qualitative and quantitative data. Relevant discipline areas for natural sciences include astronomy, biology, chemistry, earth science, and physics. For mathematics, relevant disciplines include algebra, geometry, analysis (which includes calculus), and applied mathematics (which includes probability and statistics). At least 3 semester hours in natural sciences and 3 semester hours in mathematics, of a total of 9 semester hours, are required for all undergraduate degrees in the specified programs.

- ▶ Arithmetic courses and courses that have been designated as developmental or remedial cannot be used to meet the mathematics requirement.
- ▶ No more than three courses of mathematics credit below the level of calculus may be applied to any degree. Representative titles of courses below the level of calculus include College Math, College Algebra, Elementary Functions, Modern Math, Fundamentals of Algebra, Trigonometry, and Precalculus.
- ▶ No more than one course or examination may be applied that is:
  - ▶ Terminal in nature with no prerequisites beyond the level of arithmetic;
  - ▶ Intended for students outside of science and mathematics; or
  - ▶ A mathematics appreciation course.

## Written English

Writing classes help students to hone their communication abilities, preparing them for both future academic study and communication in the workplace. The first part of Excelsior University's Written English Requirement focuses on expository writing: writing to describe, explain, or make an argument. This requirement is met through an introductory composition course. For the second part of the Written English Requirement, students may continue to study expository writing at a more advanced level or may take a course in applied writing or writing within a disciplinary area. Examples include business writing, technical writing, writing about literature, writing in the social sciences, etc.. Students in some majors (e.g., technology) may have more specific requirements for the second half of the Written English Requirement as determined by the faculty in their school.

A maximum of two courses that are 3–4 semester-hours or three courses that are quarter hours in English composition/freshman English courses will apply toward degree requirements. Courses or examinations used to fulfill the written English requirement may not be used to satisfy the Humanities distribution.

- ▶ **Associate:** 3 semester hours in expository writing within first 13 semester hours.
- ▶ **Bachelor's:** 6 semester hours, 3 semester hours in expository writing within first 13 semester hours and 3 semester hours in more advanced expository writing, applied writing, or writing within the discipline.

## Liberal Arts and Sciences

In addition to Excelsior's general education curriculum, all Excelsior undergraduate degrees include a breadth and depth of study in the liberal arts and sciences. The liberal arts and sciences are those areas of study classified as humanities, social sciences, history, natural sciences, and mathematics. The Associate in Applied Science (AAS) degree is required to have a minimum of 20 credits in the liberal arts and sciences. Associate in Science (AS) and Bachelor of Professional Studies (BPS) degrees are required to have a minimum of 30 credits, and Bachelor of Science (BS) degrees are required to have a minimum of 60 credits.

## Upper-Level Requirements

All bachelor's degree programs require a minimum of 30 hours to be completed at the upper level. Excelsior courses that are designated at the 300–400 level are considered to be upper level. Typically, external courses must be from 4-year colleges and universities offered in the junior or senior level to be considered upper-level. The acceptance of coursework toward the upper-level requirement is subject to official evaluation review.

## Major Core Requirements

All Excelsior University degrees require a specific area of academic focus within a particular field or discipline to meet the major core requirements. It includes a structured program of coursework that includes specific courses or subject areas.

## Concentration Requirements

Some Excelsior University degree programs include the choice of a concentration that provides a focused area of study within the academic major. It includes specialized coursework and provides in-depth knowledge and skills of a particular subject as related to the major. The minimum concentration hours can vary from 9–15 hours depending on the degree program.

## Elective Requirements

Individual degree programs may require additional elective requirements. Elective courses apply toward degree requirements as choices that are beyond the specified required sequence of courses. Some of these elective courses must be in specific areas such as arts and sciences courses.

## Prerequisites to the Major Core Requirements

Individual degree programs may require certain requirements to be completed prior to the major core requirements. Reference the individual degree program section for further details.

## Required Excelsior University Courses

Individual degree programs may require additional requirements to be completed at Excelsior University. External coursework completed and submitted to Excelsior University prior to a student's admission date will be considered for transfer credit. Reference the individual degree program section for further details.

## Capstone Requirement

The Capstone course is designed to bring together the student's cumulative knowledge and skills to demonstrate mastery of the learning outcomes for the degree program. Through a mixture of discussion, presentations, and written analysis, students will apply their previous learning in new ways, both analyzing and synthesizing fresh perspectives on their learning. A minimum grade of C is required for all associate and bachelor's degrees. Reference the individual master's degree programs for minimum grade requirements.

## College of Liberal Arts and Sciences

## Message from the Executive Dean

Dear Student,

It is with great joy and enthusiasm that I offer you a warm welcome to the College of Liberal Arts and Sciences. We are truly honored that you chose to pursue your degree at Excelsior University. Whether you are returning to school after some time away or continuing immediately after the completion of an undergraduate degree, the choice to pursue a university education is an important step in your lives and a significant investment of your time and effort, and one that can pay incredible dividends personally and professionally. Please know that as a school, we care deeply about your success, and we are committed to supporting your personal development, as well as your academic and career goals.

Your choice of Excelsior University comes with a promise from us: to provide you with a high-quality, rigorous academic experience that prepares you for the careers of the future and to be leaders in your communities. Our market-oriented programs will enable you to explore your field of study—whether it be in business, technology, or the liberal arts. But even more importantly, we want to challenge you to think more deeply about the intersection among these disciplines, and how you can work collaboratively and innovatively to seek solutions to the most significant issues of the day. As learners in our courses, you will engage with our expert, collaborative, and caring faculty, who bring their industry expertise and use our technology-enabled platforms to prepare you to be future ready. No matter what, during your time with us, know that our biggest joy is seeing the success of our students.

By choosing Excelsior University, you have placed great trust in us, and it is our honor to support you meeting your goals. Please know that along every step of your journey, the faculty and staff within the College of Liberal Arts and Sciences are here to support you. Please don't hesitate to reach out to us for guidance, support, or just to say hello.

Once again, thank you so much for entrusting us with your education, and best of luck on your success.

A handwritten signature in black ink that reads "Scott V. Dolan".

Scott V. Dolan, PhD  
Executive Dean, College of Liberal Arts and Sciences

## College of Liberal Arts and Sciences

### *Mission Statement*

---

The College of Liberal Arts and Sciences prepares all learners for the careers of the future through high-quality, innovative, inclusive, and relevant learning experiences enabled by expert and caring faculty, technology, and industry and academic partnerships. We empower our student community to thrive intellectually, emotionally, and socially, equipping them to make meaningful contributions to an ever-changing world.

### *Vision Statement*

---

We will be a future-focused college that provides innovative academic experiences across multiple modalities, enabled by the capabilities of technology, and delivered by dynamic and expert faculty in ways that promote Excelsior as a lifelong, student-centered learning home.

# College of Liberal Arts and Sciences Honor Societies

## Alpha Nu Sigma Honor Society

Membership in Alpha Nu Sigma, an affiliate honor society of the American Nuclear Society, recognizes the high scholarship, integrity, and potential achievement in the applied nuclear science and nuclear engineering of those students.

### Who is eligible:

Members of Alpha Nu Sigma are selected from juniors and seniors in the top 25% and 33%, respectively, of their class in Excelsior University's Bachelor of Science in Nuclear Engineering Technology program and Bachelor of Professional Studies in Technology Management, Nuclear Technology concentration, program.

[ANS National Honor Society Charter](#)

[Learn more about the American Nuclear Society](#)

---

## Alpha Sigma Lambda National Honor Society

The Alpha Sigma Lambda National Honor Society's purpose is to recognize academically outstanding students in higher education. Alpha Sigma Lambda is recognized as the official honor society for adult learners by the Association of College Honor Societies. Every year, undergraduate students in the College of Liberal Arts and Sciences are inducted into Excelsior's Sigma Zeta chapter of Alpha Sigma Lambda.

### Who is eligible:

Members of Alpha Sigma Lambda are selected from the top 20% of students with a GPA greater than 3.5 who have earned a minimum number of credits at Excelsior, including credits in the arts and sciences.

[Learn more about Alpha Sigma Lambda](#)

## Sigma Beta Delta

Sigma Beta Delta was established to honor students who have attained superior records in business programs in schools and colleges with regional accreditation. It has been an American collegiate tradition for more than 200 years.

### Who is eligible:

To be eligible for Sigma Beta Delta, a business student must rank in the upper 20% of the junior, senior, or master's class and be invited to become a member by the faculty officers.

[Learn more about Sigma Beta Delta](#)

---

## Upsilon Pi Epsilon Honor Society

The mission of Upsilon Pi Epsilon is to recognize academic excellence at both the undergraduate and graduate levels in the computing and information disciplines and to encourage these students' contribution to the enhancement of knowledge.

### Who is eligible:

To be invited to apply, undergraduate and graduate students must rank in the upper 35% of the class. Candidates will have completed 45 (undergraduate) semester hours of college work or at least one half of the number of semester hours of graduate work.

[Learn more about Upsilon Pi Epsilon](#)

**College of Liberal Arts and Sciences**  
**DEPARTMENT OF LIBERAL ARTS**  
*Degree and Certificate Programs*

## College of Liberal Arts and Sciences

### DEPARTMENT OF LIBERAL ARTS

#### *Mission Statement*

---

The Department of Liberal Arts fosters intellectual growth, critical and creative thinking skills, and civic responsibility in students by offering diverse, inclusive, and interdisciplinary learning experiences in flexible liberal arts degree programs and enriching general education experiences for all students. We equip students with 21st-century knowledge, skills, and abilities that enable them to analyze complex problems, communicate effectively, and engage empathetically with diverse perspectives. We inspire students to contribute to society meaningfully, as informed citizens and innovative thinkers, rising as leaders in their respective fields.

#### *Vision Statement*

---

Our vision is to be a dynamic department for liberal arts education, where students explore within and across disciplines to develop a deep understanding of the human experience. We prepare graduates who are intellectually agile, ethically grounded, and ready to address the challenges of a rapidly changing world. We aspire to cultivate a community that celebrates curiosity, fosters resilience, and champions social justice and democracy, empowering lifelong learners to make transformative contributions to society.

# Associate in Science in Liberal Arts

## Overview

When students graduate with an Associate in Science in Liberal Arts from Excelsior University, they embody the classic strengths of a foundational education: abstract thinking and critical analysis, concise communication and clear comprehension skills, historical awareness, scientific thinking, and an appreciation for arts. Our liberal arts degree program empowers students to study a subject in-depth, building the confidence to embark on a new professional life or pursue a higher-level degree in the liberal arts or a focused discipline.

## Program Learning Outcomes

Upon completion of the Excelsior University Associate in Science in Liberal Arts program, students will be able to:

1. Effectively communicate in writing and orally to a targeted audience.
2. Identify issues of cultural diversity and how they impact different global communities.
3. Integrate information from diverse sources to solve problems and achieve goals.
4. Research an ethical dilemma and articulate findings from multiple perspectives.
5. Identify strategies for continuing education within a chosen professional career.

# Bachelor of Science in Liberal Arts

## Overview

For students who are working toward a promotion at work, are curious about their own capabilities, or want to change their profession altogether, a Bachelor of Science in Liberal Arts is one of the best ways to open those new doors. Comprehensive and foundational, a liberal arts degree prepares students to move forward in their current field or find a completely new path.

This program emphasizes critical analysis, effective communication skills, evidence-based decision-making, leadership, and collaboration with diverse thinkers. Students define their own programs by combining their past experience with new coursework. This general liberal arts degree is a flexible and effective way to integrate past learning with new educational goals and emerge prepared for a myriad of job opportunities.

Program concentrations include an option in **Logistics Management**.

The optional concentration in Logistics Management prepares students for key operational leadership roles in business or the military. The concentration enables students to think critically and solve problems in key areas such as supply chain management, inventory control, distribution, and project management operations.

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Liberal Arts program, students will be able to:

1. Articulate complex concepts to a targeted audience in written and oral form.
2. Analyze the influence of cultural diversity when addressing global issues.
3. Collaborate within a team to solve problems or achieve a common goal.
4. Evaluate multiple perspectives on a dilemma and present an evidence-based argument.
5. Apply academic and professional knowledge, skills, and experiences to career goals.

## Concentration Learning Outcomes

Upon completion of the Logistics Management concentration, students will be able to:

1. Analyze logistics, supply chain, and project management operations.
2. Prioritize cost reduction, risk, and maximized profits for logistics operations.
3. Integrate multidimensional methods to solve inventory control, facilities planning, warehousing, and distribution problems.

# Bachelor of Science in Psychology

## Overview

Psychology, often referred to as “the helping profession,” appeals to students who have a passion for serving others and are interested in unlocking the mysteries of the human mind. Psychology majors develop a deeper understanding of themselves, others, and the world around them as they explore what motivates behavior and causes emotion. Studying what makes people tick, personality, and cognition enables psychology majors to develop strong communication, critical thinking, and analytical skills. Psychology is a rapidly growing field with a multitude of career opportunities, including counseling, social work, sales, communication, business, and research. Many psychology majors continue their education and obtain graduate degrees in counseling psychology, forensic psychology, sports psychology, school psychology, and industrial psychology to name a few.

# Bachelor of Professional Studies in Business and Management

## Overview

The Bachelor of Professional Studies in Business and Management program's strength is primarily based on the curriculum, ease of reentry into higher education, and the ability to obtain a degree that offers the necessary skills to be successful in the workforce. This program affords students the opportunity to strengthen their business acumen as well as apply theory to best practices in the workplace thorough course assignments and projects. In the program, students can apply knowledge attained from their careers and previous course work they've completed while adding to their skills and abilities, culminating with a Process Improvement Plan in the Capstone course.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Professional Studies in Business and Management program, students will be able to:

1. Apply basic accounting concepts and principles to the analysis and interpretation of corporate financial statements.
2. Explain how modern marketing concepts and theories support and influence business strategies.
3. Utilize financial management concepts and tools in order to make informed business decisions.
4. Apply the major concepts and theories of management to develop business strategies in a real-world context.
5. Analyze the opportunities and risks associated with doing business in global environment.
6. Employ organizational theories and concepts to explain the impact of the organizational environment on management practices and employee relations.
7. Analyze various leadership approaches and their application to different organizational contexts.
8. Apply project management tools and techniques in a business environment.
9. Effectively communicate strategic management concepts orally and in writing to multiple audiences.
10. Apply various information technologies to support business strategies.
11. Justify decisions by evaluating the social, ethical, and legal implications for business organizations.
12. Apply knowledge of business concepts and functions in an integrated manner.

# Bachelor of Science in Business

## Overview

In the Bachelor of Science in Business program, students have the opportunity to explore a concentration in the areas of accounting, finance, human resources management, logistics management, or marketing. The critical thinking skills that students develop across the discipline will lend to their current and future career success. Students complete notable projects including a Global Product Launch, Strategic Marketing Plan, and Personal Data Project. The program culminates with a real-world simulation where they apply the knowledge attained throughout the program.

Program concentrations include **General, Accounting, Finance, Human Resources Management, Logistics Management, and Marketing.**

The **General concentration** in business allows learners to explore different aspects of the business discipline. Rather than focusing on one specific subject, this concentration offers a variety of courses from which to choose, providing a well-rounded perspective in business to support students' career goals—regardless of their role within an organization.

The **Accounting concentration** offers students a competitive edge in the field with additional coursework that supports advancement and knowledge in accounting. Whether students work as an accountant or seek knowledge in accounting practices to support their managerial role, this concentration ensures a solid foundation.

The **Finance concentration** focuses on advanced courses in finance and financial management. This concentration is intended for learners who wish to explore in-depth knowledge in finance or who have an interest in pursuing a career in finance in mid to upper-level management.

The **Human Resources Management concentration** supports a student's role as an HR generalist or in a general managerial position. It covers the process of hiring, mentoring, training, and assessing human resource needs for an organization.

The **Logistics Management concentration** focuses on advanced courses in logistics and supply chain management. This concentration supports a career in and outside of a logistics role as managers often need to understand the logistics process to inform their decision-making. Logistics now plays a critical role in nearly every industry, making it an essential skillset for any business student looking to lead operations, strategy, or growth.

The **Marketing concentration** helps students understand how to reach today's consumers in a fast-changing world. Students will explore the digital marketing space, build skills in marketing research, and learn how to connect with the right audience. No matter their current role, this concentration can help students grow their impact and stand out in any organization.

BUS 225 Consumer Behaviors	3
BUS 343 International Marketing	3
BUS 352 Digital Marketing Fundamentals	3
BUS 375 Marketing Management	3
BUS 460 Market Research	3

A minimum grade of C is required for all Concentration requirements.

## No Concentration (Optional)

Students may choose to complete this option by applying 15 additional credits in any academic area.

A minimum grade of C is required for all No Concentration requirements.

## Arts and Sciences Electives Requirements: 9 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

A minimum grade of C is required for all Arts and Sciences Electives requirements.

## Elective Requirements: 17 credits

Additional credits needed to fulfill the program requirements in any academic area.

A minimum grade of C is required for all Elective requirements.

Continued on next page

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Business program, students will be able to:

1. Apply micro and macroeconomic concepts and theories to explain the relationship between legal, social, and economic interest of individuals and society.
2. Apply basic accounting concepts and principles to the analysis and interpretation of corporate financial statements.
3. Explain how modern marketing concepts and theories support and influence business strategies.
4. Utilize financial management concepts and tools in order to make informed business decisions.
5. Apply the major concepts and theories of management in order to develop business strategies in a real-world context.
6. Utilize quantitative research, statistics, and data analysis to analyze business data, support business decisions, and solve problems.
7. Analyze the opportunities and risks associated with doing business in a global environment.
8. Justify decisions by evaluating the social, ethical, and legal implications for business organizations.
9. Effectively communicate business concepts orally and in writing to multiple audiences.
10. Utilize business computer applications and information technologies to organize and interpret business data and information.
11. Work effectively and collaboratively on diverse, multigenerational teams to complete projects based on real-world scenarios.
12. Employ critical thinking skills to interpret and analyze competing arguments and perspectives in a business environment.
13. Organize tasks and understand how to delegate responsibility in order to complete collaborative projects in a timely manner.
14. Evaluate their individual strengths and weaknesses with desire to update skills and continually improve.
15. Apply knowledge of business concepts and functions in an integrated manner to make strategic decisions in a real-world context.

Continued on next page

# Concentration Learning Outcomes

## Accounting

Upon completion of the **Accounting concentration**, students will be able to:

1. Describe Generally Accepted Accounting Principles (GAAP), concepts, and theories.
2. Integrate accounting decision-making tools for evaluating financial statements, conducting audits, and performing cost accounting.
3. Evaluate individual and corporate taxation policies, regulations, and practices of business organizations.

## Finance

Upon completion of the **Finance concentration**, students will be able to:

1. Describe managerial functions within global financial markets and banking institutions.
2. Integrate effective strategies for improving the financial management of domestic and foreign corporations.
3. Evaluate organizational financial risks through securities and portfolio analysis.

## Logistics Management

Upon completion of the **Logistics Management concentration**, students will be able to:

1. Integrate multidimensional methods to solve inventory control, facilities planning, warehousing, and distribution problems.
2. Analyze logistics, supply chain, and project management operations.
3. Prioritize cost reduction, risk, and maximized profits for logistics operations.

## Human Resources Management

Upon completion of the **Human Resources Management concentration**, students will be able to:

1. Describe the role and context of human resource management.
2. Integrate personnel management and research into real business scenarios.
3. Evaluate human resources management and strategies to achieve organizational goals.

## Marketing

Upon completion of the **Marketing concentration**, students will be able to:

1. Describe marketing activities and strategies that are used to shift products and services from vendors to consumers in the retail and wholesale markets.
2. Integrate marketing research to forecast trends of products and services to analyze the international and domestic markets.
3. Evaluate consumer behavior and promotional policy and determine any ethical implications.

# Bachelor of Science in Criminal Justice

## Overview

The Bachelor of Science in Criminal Justice program equips criminal justice practitioners with leadership skills and experience with real-world assignments to enable them to make a difference in the various areas of criminal justice, be ready for career advancement, and attain higher pay. Students learn about the laws, processes, and administration of the U.S. criminal justice system by studying topics associated with crime-fighting procedures, police accountability, prevention of police corruption, legal processes of court trials, and the management of criminal justice agencies. Coursework for this program teaches students how psychological, sociological, and criminological theories inform criminal justice policies and procedures, and provides job-related knowledge of the causes of criminal behavior such as violent crime, property crime, and white-collar crime.

Program concentrations include **Homeland Security** and **General**.

The **Homeland Security concentration** provides students with knowledge about the threats posed by domestic and international terrorism and strategies for countering those threats. Additionally, students evaluate the best practices behind successful security planning and create threat assessments. Finally, students evaluate and develop emergency and disaster plans that can and should be employed in the face of both man-made and natural threats to the homeland.

The **General concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them flexibility in developing their knowledge and skills.

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Criminal Justice program, students will be able to:

1. Assess the components of the criminal justice system.
2. Evaluate issues in criminal justice from a theoretical framework.
3. Create policy or recommendations that demonstrate ethical considerations.
4. Analyze various criminal justice career opportunities.
5. Assess how diversity affects outcomes in the criminal justice system.

## Concentration Learning Outcomes

Upon completion of the **Homeland Security concentration**, students will be able to:

1. Explain the interdisciplinary nature of homeland security, emergency management, and policy making.
2. Apply knowledge and skills to assume leadership roles in homeland security and emergency management.
3. Discuss the ethical issues that may arise in homeland and emergency management.
4. Appraise security risks based upon organizational needs and resources in both the private and public sectors.
5. Describe the influence domestic and global diversity has on homeland security issues.

# Bachelor of Science in National Security

## Overview

The Bachelor of Science in National Security program prepares students to become leaders and policymakers that understand global conditions and shape the strategic environment. This program is especially geared to the background and career interests of military service members and veterans, and civilian employees working for the U.S. Department of Defense or other federal or state government agencies, global corporations, and nonprofits operating in multiple nations with varying social and political climates. Discover how the United States and other countries evaluate and revise their national security strategy and policies by studying related topics in history, political science, public administration, sociology, psychology, economics, military leadership, and cybersecurity. At the end of the program, students recommend ethical solutions to problems identified in their personal assessment of the national security posture of the United States.

Program concentrations include **Intelligence and Security Analysis** and **General**.

The **Intelligence and Security Analysis concentration** prepares students to assess national and global security threats, analyze intelligence, and understand how governments use various instruments of power to protect national interests. It also emphasizes the role of cybersecurity, counterterrorism, and infrastructure protection in maintaining security and resilience.

The **General concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them flexibility in developing their knowledge and skills.

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in National Security, students will be able to:

1. Describe the interdisciplinary character of national security (e.g., economics, history, political science, public administration, psychology, sociology).
2. Examine the use and components of national power (e.g., economic, military, social cohesion, quality of leadership and diplomacy, etc.).
3. Evaluate U.S. and other nation-states' national security strategies and policies.
4. Analyze ethical issues in the field of national security.
5. Deliver written communication with appropriate content, organization, syntax, mechanics, and style for the audience and purpose.
6. Pursue national security career planning that incorporates their interests, values, experiences, and analytic works.

## Concentration Learning Outcomes

Upon completion of the **Intelligence and Security Analysis concentration**, students will be able to:

1. Evaluate the global security environment, transnational threats, and how nations leverage diplomatic, military, economic, and other instruments of power.
2. Analyze intelligence gathering, threat assessment, and provide recommendations on national security matters.

# Master of Business Administration

## Overview

The Master of Business Administration (MBA) program emphasizes ethical leadership and decision making, design and development of corporate strategy, multi-geography/site teamwork and management, and the application of theory to practical situations in all concentration areas as well as in the general MBA degree. It facilitates career advancement, especially for those who work in middle management positions in business and in other organizations.

Program concentrations include **Cannabis Control, Data Analytics, Distributed Workforce Management, Finance and Accounting, General Business, Healthcare Management, Homeland Security and Emergency Management, Human Resource Management, Leadership, Marketing, Nutrition, Organizational Leadership, Public Health Equity, and Strategic Sustainability.**

The **Cannabis Control concentration** prepares students with the skills and the knowledge base to understand the impacts of legalization of cannabis in our communities, states, and nation. The curriculum incorporates best-practice instructional techniques — including realistic case studies — to foster strong critical thinking skills that will enable students to keep pace with the fast-changing environment. Innovative courses that meld industry and practitioner-based readings with the scientific-based research enable the program to offer much-needed subject matter expertise in the field.

The **Data Analytics concentration** enhances students' analytical abilities and equips them with the skills to uncover new insights that improve strategic business decisions. Through this concentration, students learn how to collect, analyze, and visually represent rich sets of data designed to improve organizational decision making.

The **Distributed Workforce Management concentration** trains students to strategically lead decisively across all functions in organizations, including recruitment and selection, training and development, performance appraisals, health and safety, labor relations, and communications. Students create value for the organizations and communities they serve by solving the complex challenges related to managing within a distributed work environment.

The **Finance and Accounting concentration** is designed to equip graduates with the necessary principles and tools to be successful in management positions in finance, business, management and accounting firms, corporations, government, and nonprofit organizations. It deepens the understanding of financial analysis, corporate disclosure, and nonprofit accounting.

The **General Business concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them with flexibility in developing their knowledge and skills.

The **Health Care Management concentration** prepares students to lead and manage health care organizations effectively. It focuses on strategic management principles and communication strategies essential for health care leaders to navigate the complex health care environment, enhance organizational performance, and improve patient outcomes.

The **Homeland Security and Emergency Management concentration** provides students with knowledge about the threats posed by domestic and international terrorism and strategies for countering those threats. Additionally, students evaluate the best practices behind successful security planning and create threat assessments. Finally, students evaluate and develop emergency and disaster plans that can and should be employed in the face of both man-made and natural threats to the homeland.

The **Human Resource Management concentration** provides students with 21st-century knowledge and skills required of human resource managers and executives who deal with human performance issues. Students are expected to effectively apply contemporary theories and empirical research to successfully perform key functions in human resource management, including staffing, employee relations, conflict resolution, and compensation and benefits.

The **Leadership concentration** equips students with essential skills to manage and inspire high-performing teams in dynamic business environments. This concentration emphasizes the practical aspects of leadership, such as direct team management, crisis handling, and change implementation, making it ideal for those looking to enhance their direct leadership capabilities.

The **Marketing concentration** allows students to learn and apply advanced constructs in digital marketing with a focus on brand development, launch, and management. The concentration traverses the private and public sector industries in the application of business-to-business and business-to-consumer centric marketing methods.

The **Nutrition concentration** equips students to educate individuals, families, and communities about healthful nutrition and the relationships between food and health. It also promotes access to healthy foods in marginalized communities.

The **Organizational Leadership concentration** takes a broader approach, focusing on communication and strategic thinking within the context of leadership. This concentration is suitable for those aiming to lead at an organizational level, combining leadership of teams with strategic communication and innovation management to drive broad organizational objectives.

The **Public Health Equity concentration** equips students to become transformational public health leaders and agents of change for their communities, particularly those who have historically faced significant health disparities. Interdisciplinary themes are infused throughout the curriculum as a best practice for cultivating enduring change in population health outcomes.

The **Strategic Sustainability concentration** provides students with the knowledge and skills to lead and implement sustainable practices within organizations. It covers environmental sustainability, the science behind sustainability, and strategic leadership for sustainable development, preparing students to drive initiatives that promote environmental responsibility and strategic sustainability.

## Degree Summary

**TOTAL PROGRAM HOURS: 30**

### Major Core Requirements: 21 credits

COURSE NAME	Credits
BUS 509 Resilient Leadership and Organizational Behavior	3
BUS 521 Operations and Project Management	3
BUS 524 Corporate Finance and Accounting	3
BUS 532 Ethical Risk Management and Compliance	3
BUS 570 Information Technology	3
BUS 573 Strategic Brand Marketing	3
BUS 699 MBA Business Strategy Capstone This requirement must be completed at Excelsior University.	3

A minimum grade of C or higher is required for all Major Core requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

### Concentration Requirements: 9 credits

One of the following must be declared.

#### Cannabis Control

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
CBC 600 Implications of Legislation of Cannabis: Policy and Compliance	3
CBC 601 Complexities of Cannabis as Commerce	3
CBC 602 Risk Assessment in Cannabis Control	3

A minimum grade of B or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## Data Analytics

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 540 Strategic Management of Innovative Technology	3
BUS 563 Data Analytics	3
BUS 564 Big Data and Visualization	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Distributed Workforce Management

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 561 Virtual Training and Development	3
BUS 562 Virtual Team Management	3
IND 522 Leading High Performing Teams	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Finance and Accounting

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
ACC 504 Corporate Financial Reporting and Disclosure	3
ACC 505 Financial Statement Analysis	3
BUS 500 Accounting for Managers	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## General Business

The following courses are suggestions; however, students may choose any graduate business course not part of the Major Core requirements.

COURSE NAME	Credits
IND 522 Leading High Performing Teams	3
BUS 500 Accounting for Managers	3
BUS 504 Human Resource Management	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Health Care Management

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 526 Strategic Management of Health Care Organizations	3
BUS 516 Communication Strategy for the Health Care Leader	3
HSC 517 Contemporary Issues in Health Care Delivery Systems	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Homeland Security and Emergency Management

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
MCJ 630 Risk Assessment in Homeland Security	3
MCJ 650 Terrorism and Counterterrorism	3
MCJ 651 Overview of Homeland Security and Emergency Management	3

A minimum grade of B or higher is required for these Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## Human Resource Management

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 504 Human Resource Management	3
BUS 514 Employment Law	3
BUS 517 Employee Staffing and Development	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Leadership

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 550 Contingency Planning	3
BUS 554 Change Management	3
IND 522 Leading High Performing Teams	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Marketing

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 501 Business Communications	3
BUS 506 Marketing	3
BUS 545 Social Media Marketing	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## Nutrition

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
HSC 644 Nutrition Science for Health Professionals	3
HSC 645 Nutrition Across the Life Cycle	3
HSC 646 Health Education: A Cross-Cultural Perspective	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Organizational Leadership

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
BUS 501 Business Communications	3
IND 522 Leading High Performing Teams	3
BUS 596 Strategy and Entrepreneurial Innovation	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Public Health Equity

Choose 3 of the following options. All requirements must be completed at Excelsior University.

COURSE NAME	Credits
PBH 592 Biostatistics	3
PBH 603 Behavioral Health and Social Environment	3
PBH 604 Epidemiology	3
PBH 610 Environmental Health	3
PBH 613 Program Planning and Evaluation for Public Health	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## Strategic Sustainability

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
SUST 601 Environmental Sustainability	3
SUST 602 Sustainability Science	3
SUST 603 Environmental Leadership and Strategic Sustainability	3

A minimum grade of C or higher is required for these concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

### Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources and the Grade Scale, GPA, and Credit Application policies.

### Program Learning Outcomes

Upon completion of the Excelsior University Master of Business Administration program, students will be able to:

1. Develop innovative strategies for leading resilient, entrepreneurial, and forward-thinking business practices in organizations.
2. Implement technology-driven solutions for organizational efficiency, competitiveness, and success.
3. Evaluate the impact of strategic decisions using business acumen.
4. Implement initiatives to enhance team inclusivity and performance in diverse contexts.
5. Develop effective communication strategies using multiple channels to align organizational vision with diverse stakeholders.
6. Develop long-term sustainability plans for organizations in dynamic environments and with a forward-looking approach.
7. Initiate collaborative projects to generate new ideas and enhance their business networks.

# Concentration Learning Outcomes

## Cannabis Control Concentration

Upon completion of the **Cannabis Control concentration**, students will be able to:

1. Recommend strategies to ensure regulatory compliance in a rapidly evolving regulatory landscape.
2. Create workforce development and public health system responses to cannabis legalization that promote social equity.
3. Conduct risk assessment in communities where cannabis has been legalized.
4. Recommend strategies for ensuring consistent product quality and safe reliable supply chains at state, federal, and international levels.

## Data Analytics Concentration

Upon completion of the **Data Analytics concentration**, students will be able to:

1. Formulate technology innovation strategies to communicate strategic data-driven business recommendations to stakeholders.
2. Use data analytics and visualization to improve, illustrate, and monitor organizational performance, while furthering the vision.

## Distributed Workforce Management Concentration

Upon completion of the **Distributed Workforce Management concentration**, students will be able to:

1. Emphasize research as vital in both academic and applied settings.
2. Collaborate on projects and case analyses with peers incorporating feedback from outside sources.
3. Focus the application of distributed workforce in a variety of organizations, including health care and nonprofits.
4. Apply managerial skills to help begin as well as advance one's career in distributed workforces.
5. Integrate diversity, equity, and inclusion into content and andragogy on distributed workforce management.
6. Change corporate policy, organizational change, and transformation because of distributed work.

## Finance and Accounting Concentration

Upon completion of the **Finance and Accounting concentration**, students will be able to:

1. Apply advanced financial accounting knowledge to corporations, government, and nonprofits.
2. Prepare financial statements and reports.

Continued on next page

## Health Care Management Concentration

Upon completion of the **Health Care Management concentration**, students will be able to:

1. Manage a diverse workforce providing health care for an increasingly heterogeneous population.
2. Analyze health care funding and delivery trends to provide recommendations for organizational action.

## Homeland Security and Emergency Management Concentration

Upon completion of the **Homeland Security and Emergency Management concentration**, students will be able to:

1. Analyze and evaluate contemporary homeland security issues as they relate to criminal justice based on an understanding of the domestic and international processes affecting homeland security.
2. Construct an argument for the relationship between the current theories of emergency management and their practical application within the American criminal justice system.
3. Evaluate risk associated with human-caused, natural, and technological disasters through a myriad of risk management approaches, including best practices use by the homeland security enterprise.

## Human Resource Management Concentration

Upon completion of the **Human Resource Management concentration**, students will be able to:

1. Analyze the legal requirements applicable to human resource decisions.
2. Apply human resource management principles to support organizational objectives.

## Leadership Concentration

Upon completion of the **Leadership concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing organizational changes.
2. Apply leadership strategies to manage conflicts in the workplace.

## Marketing Concentration

Upon completion of the **Marketing concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing digital and global marketing efforts.
2. Apply strategies to manage brand and channel development to benefit the corporations go-to-market efforts.

Continued on next page

## **Nutrition Concentration**

Upon completion of the **Nutrition concentration**, students will be able to:

1. Examine the interconnected influences of social determinants of health and nutrition policy on health outcomes for individuals and communities.
2. Use evidence-based decision-making to identify, implement, and evaluate solutions to barriers to healthful nutrition.
3. Evaluate nutritional needs across life stages and for individuals with various health conditions.

## **Organizational Leadership Concentration**

Upon completion of the **Organizational Leadership concentration**, students will be able to:

4. Discuss key issues and challenges associated with managing organizational changes.
5. Apply leadership strategies to manage conflicts in the workplace.

## **Public Health Equity Concentration**

Upon completion of the **Public Health Equity concentration**, students will be able to:

1. Evaluate how populations are impacted by social determinants of health.
2. Use data-driven decision-making and community partnering approaches to identify, implement, and evaluate solutions to public health issues.
3. Design culturally sensitive public health strategies to improve health equity and social justice.

## **Strategic Sustainability Concentration**

Upon completion of the **Strategic Sustainability concentration**, students will be able to:

1. Develop comprehensive sustainability strategies that integrate environmental, social, and economic considerations.
2. Apply scientific principles of sustainability to create innovative solutions for environmental challenges.
3. Craft initiatives that promote sustainable practices and drive organizational change toward environmental responsibility.

# Executive Master of Business Administration

## Overview

The one-year, hybrid Executive MBA offers a unique blend of industry-involved and location-informed experiences, emphasizing resilient, entrepreneurial, and forward-thinking business practices. With a tight-knit cohort model, you'll emerge as a leader with a comprehensive view of leadership in a dynamic, socially conscious business environment. Join Excelsior for a year of industry projects, experiential opportunities, the chance to explore major metropolitan cities, and network-building that can be leveraged for a lifetime.

This MBA program option has predetermined start dates. Check with Admissions for details. It is essential that all students refer to the Executive MBA Program Handbook ([link can be found here](#)) as it provides important information regarding admission requirements, curriculum, academic policy and procedures (including exceptions and restrictions) travel and accommodation logistics, attendance, conduct, location information, and location agendas.

**PROGRAM MODALITY: LOW-RESIDENCY**

## Degree Summary

**TOTAL PROGRAM HOURS: 30**

### Major Core Requirements: 30 credits

All requirements must be completed at Excelsior University.

COURSE NAME	Credits
MBAE 509 Resilient Leadership and Organizational Behavior	3
MBAE 521 Operations and Project Management	3
MBAE 524 Corporate Finance and Accounting	3
MBAE 532 Ethical Risk Management and Compliance	3
MBAE 570 Information Technology	3
MBAE 573 Strategic Brand Marketing	3
MBAE 595 Systems and Sustainability	3
MBAE 596 Strategy and Entrepreneurial Innovation	3
MBAE 508 Managerial Economics	3
MBAE 699 Business Strategy Capstone	3

A minimum grade of C or higher is required for all Major Core requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Program Learning Outcomes

Upon completion of the Excelsior University Executive Master of Business Administration program, students will be able to:

1. Develop innovative strategies for leading resilient, entrepreneurial, and forward-thinking business practices in organizations.
2. Implement technology-driven solutions for organizational efficiency, competitiveness, and success.
3. Evaluate the impact of strategic decisions using business acumen.
4. Implement initiatives to enhance team inclusivity and performance in diverse contexts.
5. Develop effective communication strategies using multiple channels to align organizational vision with diverse stakeholders.
6. Develop long-term sustainability plans for organizations in dynamic environments and with a forward-looking approach.
7. Initiate collaborative projects to generate new ideas and enhance their business networks.

# Doctor of Business Administration

## Overview

The Doctor of Business Administration (DBA) program at Excelsior University is designed for experienced professionals seeking to elevate their strategic leadership, research, and consulting skills. The program is delivered online, with two in-person residencies and some online synchronous sessions, providing flexibility while ensuring valuable face-to-face networking, mentoring, and research support opportunities. The program equips students with advanced knowledge of business theories, research methods, and evidence-based practices, preparing them to become leaders in their industries.

Program concentrations include **Cybersecurity Operations**, **Data Analytics**, **Enterprise Risk Management**, **Finance and Accounting**, **Healthcare Management**, **Organizational Leadership**, and **Strategic Sustainability**.

The **Cybersecurity Operations concentration** offers students a hands-on approach for combating cybersecurity threats and conducting risk analysis. The focus is on threat detection and incident response, information assurance, and cyber defense mitigation.

The **Data Analytics concentration** enhances students' analytical abilities and equips them with the skills to uncover new insights that improve strategic business decisions. Through this concentration, students learn how to collect, analyze, and visually represent rich sets of data designed to improve organizational decision making.

The **Enterprise Risk Management concentration** equips students with the expertise to identify, assess, and manage risks across an organization, ensuring resilience and strategic advantage. This concentration prepares students to develop and implement robust risk management strategies and business continuity plans that safeguard organizational assets and operations.

The **Finance and Accounting concentration** is designed to equip graduates with the necessary principles and tools to be successful in management positions in finance, business, management and accounting firms, corporations, government, and nonprofit organizations. It deepens the understanding of financial analysis, corporate disclosure, and nonprofit accounting.

The **Health Care Management concentration** prepares students to lead and manage health care organizations effectively. It focuses on strategic management principles and communication strategies essential for health care leaders to navigate the complex health care environment, enhance organizational performance, and improve patient outcomes.

The **Organizational Leadership concentration** takes a broader approach, focusing on communication and strategic thinking within the context of leadership. This concentration is suitable for those aiming to lead at an organizational level, combining leadership of teams with strategic communication and innovation management to drive broad organizational objectives.

The **Strategic Sustainability concentration** provides students with the knowledge and skills to lead and implement sustainable practices within organizations. It covers environmental sustainability, the science behind sustainability, and strategic leadership for sustainable development, preparing students to drive initiatives that promote environmental responsibility and strategic sustainability.

### **PROGRAM MODALITY: LOW-RESIDENCY**

While the majority of this program is delivered asynchronously online, this program contains two in-person residencies and some online synchronous components.

## Degree Summary

**TOTAL PROGRAM HOURS: 60**

### Major Core Requirements: 30 credits

COURSE NAME	Credits
DBA 700 Contemporary Business Theory and Application	3
DBA 701 Applied Research Methods in Business	3
DBA 702 Leadership Theory and Development	3
DBA 703 Financial Resources Management and Strategic Investment	3
DBA 704 Organizational Structures & Systems Thinking	3
DBA 705 Strategic Foresight and Strategy Formation	3
DBA 706 Global Business Environment and Strategy	3
DBA 707 Marketing for Competitive Advantage	3
DBA 708 Human Capital Management	3
DBA 709 Consulting Techniques	3

A minimum grade of B is required for all Major Core requirements.

### Concentration Requirements: 18 credits

Choose two concentrations.

#### Cybersecurity Operations

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
CYS 560 Information Assurance	3
CYS 575 IT Risk Analysis and Management	3
CYS 526 Cyber Attacks and Defense	3

A minimum grade of B is required for all Concentration requirements.

Continued on next page

## Data Analytics

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
BUS 540 Strategic Management of Innovative Technology	3
BUS 563 Data Analytics	3
BUS 564 Big Data and Visualization	3

A minimum grade of B is required for all Concentration requirements.

## Enterprise Risk Management

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
ERM 600 Foundations of Enterprise Risk Management	3
ERM 601 Applied Enterprise Risk Management Methods and Analysis	3
ERM 602 Business Continuity Planning Strategy	3

A minimum grade of B is required for all Concentration requirements.

## Finance and Accounting

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
ACC 504 Corporate Financial Reporting and Disclosure	3
ACC 505 Financial Statement Analysis	3
BUS 500 Accounting for Managers	3

A minimum grade of B is required for all Concentration requirements.

## Health Care Management

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
BUS 516 Communication Strategy for the Health Care Leader	3
BUS 526 Strategic Management of Health Care Organizations	3
HSC 517 Contemporary Issues in Health Care Delivery Systems	3

A minimum grade of B is required for all Concentration requirements.

Continued on next page

## Organizational Leadership

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
BUS 501 Business Communications	3
IND 522 Leading High Performing Teams	3
BUS 596 Strategy and Entrepreneurial Innovation	3

A minimum grade of B is required for all Concentration requirements.

## Strategic Sustainability

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
SUST 601 Environmental Sustainability	3
SUST 602 Sustainability Science	3
SUST 603 Environmental Leadership and Strategic Sustainability	3

A minimum grade of B is required for all Concentration requirements.

## Residency and Residency Courses: 4 credits

Choose two. This requirement must be completed at Excelsior University.

COURSE NAME	Credits
DBA 720 DBA Residency I	2
DBA 721 DBA Residency II	2

A minimum grade of B is required for all Residency requirements.

## Dissertation Seminars: 8 credits

This requirement must be completed at Excelsior University.

COURSE NAME	Credits
DBA 710 Dissertation Seminar I	3
DBA 711 Dissertation Seminar II	3
DBA 712 Dissertation Seminar III	2

A minimum grade of B is required for all Dissertation requirements.

Continued on next page

## Dissertation Extensions: 2 credits

Choose up to two.

COURSE NAME	Credits
DBA 713 Dissertation Seminar IV (Optional)	1
DBA 714 Dissertation Seminar V (Optional)	1

A minimum grade of B is required for all Dissertation Extensions requirements.

## Program Learning Outcomes

Upon completion of the Excelsior University Doctor of Business Administration program, graduates will be able to:

1. Evaluate contemporary business theories and research methods to identify gaps, trends, and new opportunities that drive decision-making and strategic planning.
2. Conduct applied research to examine and advance organizational strategy.
3. Formulate evidence-based business solutions for change management with a focus on ethical, social, and global considerations.
4. Use a systems perspective to anticipate trends and plan sustainably, balancing profit with social and environmental responsibility.
5. Influence diverse stakeholders with impactful communication to build consensus while leading organizational transformation.

## Concentration Learning Outcomes

### Cybersecurity Operations

Upon completion of the **Cybersecurity Operations concentration**, students will be able to:

1. Apply risk analysis methodologies to identify potential vulnerabilities, associated impacts, and recommend appropriate responses.
2. Apply appropriate protocols, tools, and techniques to maximize security in the network environment.
3. Construct cybersecurity strategies that use information technology to measurably improve cybersecurity performance.

Continued on next page

## Data Analytics

Upon completion of the **Data Analytics concentration**, students will be able to:

1. Formulate technology innovation strategies to communicate strategic data-driven business recommendations to stakeholders.
2. Use data analytics and visualization to improve, illustrate, and monitor organizational performance while furthering the vision.

## Enterprise Risk Management

Upon completion of the **Enterprise Risk Management concentration**, students will be able to:

1. Develop comprehensive risk management frameworks that identify, assess, and mitigate organizational risks effectively.
2. Apply advanced risk management methods to enhance organizational resilience and strategic decision-making.
3. Design business continuity plans to ensure operational stability and rapid recovery from disruptions.

## Finance and Accounting

Upon completion of the **Finance and Accounting concentration**, students will be able to:

1. Apply advanced financial accounting knowledge to corporations, government, and nonprofits.
2. Prepare financial statements and reports.

## Health Care Management

Upon successful completion of the **Health Care Management concentration**, students will be able to:

1. Manage a diverse workforce providing health care for an increasingly heterogeneous population.
2. Analyze health care funding and delivery trends to provide recommendations for organizational action.

## Organizational Leadership

Upon successful completion of the **Organizational Leadership concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing organizational changes.
2. Apply leadership strategies to manage conflicts in the workplace.

## Strategic Sustainability

Upon successful completion of the **Strategic Sustainability concentration**, students will be able to:

1. Develop comprehensive sustainability strategies that integrate environmental, social, and economic considerations.
2. Apply scientific principles of sustainability to create innovative solutions for environmental challenges.
3. Craft initiatives that promote sustainable practices and drive organizational change toward environmental responsibility.

# Master of Public Administration

## Overview

The Master of Public Administration (MPA) program helps students to master both the personal and the business side of public administration with courses and assignments that show them how to harness information technology, respond to ethical issues, foster constructive collaboration, and more. Students also gain practical experience in honing their presentation skills, developing strategic plans and financial reports, and analyzing data to make better decisions. Students leave the program with a complete professional portfolio ready to present to prospective or current employers.

The **General concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them with flexibility in developing their knowledge and skills.

The **Cannabis Control concentration** prepares students with the skills and the knowledge base to understand the impacts of legalization of cannabis in our communities, states, and nation. The curriculum incorporates best-practice instructional techniques—including realistic case studies—to foster strong critical thinking skills that enable students to keep pace with the fast-changing environment. Innovative courses that meld industry and practitioner-based readings with scientific-based research enable the program to offer much-needed subject matter expertise in the field.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 30**

**Major Core Requirements: 21 credits**

COURSE NAME	Credits
IND 501 An Interdisciplinary Approach to Ethical Leadership This requirement must be completed at Excelsior University.	3
IND 502 Strategic Talent Management in a Complex World	3
IND 503 Data Driven Decision Making	3
MPA 500 Introduction to Public Administration Theory and Practice	3
MPA 502 Public Management in a Political Environment	3
MPA 511 Public Budgeting and Financial Management	3
MPA 698 Capstone in Public Administration This requirement must be completed at Excelsior University.	3

A minimum grade of B or higher is required for all Major Core and Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Concentration Requirements: 9 credits

One of the following must be declared.

### General

COURSE NAME	Credits
BUS 501 Business Communications	3
ADR 671 Mediation	3
MPA 651 Contemporary Issues in Nonprofit Management	3

### Cannabis Control

COURSE NAME	Credits
CBC 600 Implications of Legalization of Cannabis: Policy and Compliance	3
CBC 601 Complexities of Cannabis as Commerce	3
CBC 602 Risk Assessment in Cannabis Control	3

A minimum grade of B or higher is required for all Major Core and Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources, and the Grade Scale, GPA, and Credit Application policies.

## Program Learning Outcomes

Upon completion of the Excelsior University Master of Public Administration, students will be able to:

1. Interpret and analyze data to formulate and influence decision-making.
2. Evaluate financial data and budgets to make sound fiscal decisions for the public sector.
3. Assess the use of technology to assist in solving complex problems and optimizing resources in the public sector.
4. Apply interdisciplinary leadership practices based on evidence that promotes ethical and collaborative sustainable change in the public sector.
5. Evaluate interdisciplinary approaches to problem solving and opportunities to lead a diverse/global workforce.
6. Apply effective communication techniques to address issues and multiple paths for solutions.

Continued on next page

## Concentration Learning Outcomes

Upon completion of the **Cannabis Control concentration**, students will be able to:

1. Recommend strategies to ensure regulatory compliance in a rapidly evolving regulatory landscape.
2. Create workforce development and public health system responses to cannabis legalization that promote social equity.
3. Conduct risk assessment in communities where cannabis has been legalized.
4. Recommend strategies for ensuring consistent product quality and safe, reliable supply chains at level, state, federal, and international levels.

# Master of Science in Criminal Justice

## Overview

A master's degree in criminal justice provides current professionals opportunities to secure leadership roles in agencies including the FBI. Students learn how to address legal and ethical dilemmas in the workplace, analyze crime statistics, and how to develop effective crime-fighting strategies based on their findings. They study the police, courts, corrections, and the history of criminology as they conduct criminal justice research projects and write data-based reports that can be used to create new or improved public policies.

The **General concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them with flexibility in developing their knowledge and skills.

The **Cannabis Control concentration** prepares students with the skills and the knowledge base to understand the impacts of legalization of cannabis in our communities, states, and nation. The curriculum incorporates best-practice instructional techniques—including realistic case studies—to foster strong critical thinking skills that enable students to keep pace with the fast-changing environment. Innovative courses that meld industry and practitioner-based readings with scientific-based research enable the program to offer much-needed subject matter expertise in the field.

The **Homeland Security and Emergency Management concentration** provides students with knowledge about the threats posed by domestic and international terrorism and strategies for countering those threats. Students evaluate the best practices behind successful security planning and create threat assessments. Finally, students evaluate and develop emergency and disaster plans that can and should be employed in the face of both man-made and natural threats to the homeland.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

2. Construct an argument for the relationship between the current theories of emergency management and their practical application within the American criminal justice system.
3. Evaluate risk associated with human-caused, natural, and technological disasters through a myriad of risk management approaches, including best practices used by the homeland security enterprise.

# Master of Science in Human Resource Management with an Emphasis in Diversity and Technology

## Overview

The Master of Science in Human Resource Management with an Emphasis in Diversity and Technology program is structured using an interdisciplinary framework in keeping with research that suggests complex human management issues are interdisciplinary in nature, and human resource leaders must be knowledgeable about leading individuals and teams within an interdisciplinary environment. Human resource management is a multidisciplinary organizational function that draws research and theories from several fields of study, including management, psychology, and economics. This degree program integrates legal, management, and social sciences research with an action learning-based approach toward executive-level leadership education.

4. Develop strategic human resource planning processes for the key functional areas of a global business organization.
5. Evaluate human resource policies and practices to manage risk and ensure compliance with laws and regulations.
6. Utilize the latest technologies and best practices in communication to develop interdepartmental teams and relationships.

# Master of Science in Management

## Overview

The Master of Science in Management is a professional degree intended for those who desire to advance their career in the business, nonprofit, military, or government sector. This interdisciplinary program focuses on leadership, organizational behavior, change management, global business environment, and conflict management to enable students to build a strong foundation to qualify for an organizational leadership or management role. Progressive and growing organizations are in constant demand of candidates who possess advanced leadership and project management knowledge. The program integrates theory, case study, and practice to prepare students to grow both their personal and organizational leadership and motivational abilities.

The **General Business concentration** allows students to develop a personalized concentration area that spans multiple concentrations. Students tailor their concentration to their specific life and career goals, providing them with flexibility in developing their knowledge and skills.

The **Human Resource Management concentration** provides students with 21st-century knowledge and skills required of human resource managers and executives who deal with human performance issues. Students are expected to effectively apply contemporary theories and empirical research to successfully perform key functions in human resource management, including staffing, employee relations, conflict resolution, and compensation and benefits.

The **Organizational Leadership concentration** focuses on communication and strategic thinking within the context of leadership. This concentration is suitable for those aiming to lead at an organizational level, combining leadership of teams with strategic communication and innovation management to drive broad organizational objectives.

## Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources and the Grade Scale, GPA, and Credit Application policies.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Management program, students will be able to:

1. Apply interdisciplinary leadership practices based on evidence that promotes ethical and collaborative sustainable change in business.
2. Evaluate different methods and strategies used to develop individuals and manage teams in multiple settings.
3. Analyze how different functional areas within a global business organization affect its strategic direction.
4. Apply project management tools and techniques in a business environment.
5. Create sustained and coherent arguments to summarize work for both internal (e.g., management, peers, subordinates) and external audiences.
6. Generate solutions to business problems through the use of information technologies.
7. Integrate theory and practice for the purpose of strategic analysis.
8. Evaluate individual strengths and weaknesses with the desire to update skills and continuously improve.

## Concentration Learning Outcomes

### Human Resource Management Concentration

Upon completion of the **Human Resource Management concentration**, students will be able to:

1. Analyze the legal requirements applicable to human resource decisions.
2. Apply human resource management principles to support organizational objectives.

### Organizational Leadership Concentration

Upon completion of the **Organizational Leadership concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing organizational changes.
2. Apply leadership strategies to manage conflicts in the workplace.

# Master of Science in Organizational Leadership with an Emphasis in Technology and Data Analytics

## Overview

The Master of Science in Organizational Leadership with an Emphasis in Technology and Data Analytics is a fully online, asynchronous degree program that equips leaders to effectively lead their teams through turbulence and change, make data-driven decisions, and visualize goals and progress to drive their organization forward. The innovative coursework melds industry and practitioner-based experiences. Through coursework in leadership theory, decision making, organization behavior, technology innovation, data analytics, big data and visualization, cybersecurity, and project management, the program prepares emerging leaders to make good use of big data and incorporate technology to advance their bottom line, as well as solve unique challenges impacting organizations today.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 30**

**Major Core Requirements: 30 credits**

COURSE NAME	Credits
<b>IND 501 An Interdisciplinary Approach to Ethical Leadership</b> This requirement must be completed at Excelsior University.	<b>3</b>
<b>IND 502 Strategic Talent Management in a Complex World</b>	<b>3</b>
<b>IND 503 Data Driven Decision Making</b>	<b>3</b>
<b>CYS 500 Foundations of Cybersecurity</b>	<b>3</b>
<b>BUS 530 Project Management Principles and Application</b>	<b>3</b>
<b>BUS 540 Strategic Management of Innovative Technology</b>	<b>3</b>
<b>BUS 553 Organizational Behavior</b>	<b>3</b>
<b>BUS 563 Data Analytics</b>	<b>3</b>
<b>BUS 564 Big Data and Visualization</b>	<b>3</b>
<b>BUS 696 Organizational Leadership, Technology, and Analytics Capstone</b> This requirement must be completed at Excelsior University.	<b>3</b>

A minimum grade of B or higher is required for all Major Core and Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources, and the Grade Scale, GPA, and Credit Application policies.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Organizational Leadership with an Emphasis in Technology and Data Analytics, students will be able to:

1. Apply interdisciplinary leadership practices based on evidence that promotes ethical and collaborative change within the workforce.
2. Evaluate interdisciplinary approaches to problem solving and opportunities to lead a diverse/global workforce.
3. Analyze organizational behavior, culture, and human resources management information to generate strategic decision-making and initiate sustainable change.
4. Implement project and process management techniques to manage teams and innovative projects.
5. Utilize data analytics, big data, and visualizations to communicate effectively with stakeholders throughout the organization.

# Graduate Certificate in Advanced Project Management

9  
CREDITS

## Certificate Description

The Graduate Certificate in Advanced Project Management will provide students with the opportunity to hone their project management and information technology skills from a leadership perspective. Students will manage a technology implementation project from start to finish, evaluating project risks and methods to control those risks, and hone their leadership skills across the three certificate courses.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ BUS 552 Leadership (3 credits)
- ▶ BUS 530 Project Management or BUS 572 Technology and Project Management (3 credits)
- ▶ BUS 570 Information Technology (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Advanced Project Management, students will be able to:

1. Manage IT-related projects from planning through delivery.
2. Evaluate project risks and opportunities to ensure organization needs are met.
3. Apply leadership techniques to build collaborative teams for successful project completion.

## Policies Specific to the Graduate Certificate in Advanced Project Management

Policies and procedures that apply specifically to the Graduate Certificate in Advanced Project Management are listed in the following section:

- ▶ **Admission Eligibility:** Students must have an earned bachelor's degree for admittance in the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all Advanced Project Management certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Advanced Project Management have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Cannabis Control

9  
CREDITS

## Certificate Description

The Graduate Certificate in Cannabis Control prepares students with the skills and knowledge base to understand the impacts of legalization of cannabis in our communities, states, and nation. The curriculum incorporates best-practice instructional techniques—including realistic case studies—to foster strong critical thinking skills that will enable students to keep pace with the fast-changing environment. Innovative courses that meld industry and practitioner-based readings with scientific-based research enable the program to offer much-needed subject matter expertise in the field.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ **CBC 600 Implications of Legalization of Cannabis: Policy and Compliance** (3 credits)
- ▶ **CBC 601 Complexities of Cannabis as Commerce** (3 credits)
- ▶ **CBC 602 Risk Assessment in Cannabis Control** (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Cannabis Control, students will be able to:

1. Recommend strategies to ensure regulatory compliance in a rapidly evolving regulatory landscape.
2. Create workforce development and public health system responses to cannabis legalization that promote social equity.
3. Conduct risk assessment in communities where cannabis has been legalized.
4. Recommend strategies for ensuring consistent product quality and safe reliable supply chains at local, state, federal, and international levels.

## Policies Specific to the Graduate Certificate in Cannabis Control

Policies and procedures that apply specifically to the Graduate Certificate in Cannabis Control are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all Cannabis Control certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Cannabis Control have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Data Analytics

9  
CREDITS

## Certificate Description

The Graduate Certificate in Data Analytics enhances students' analytical abilities and equips them with the skills to uncover new insights that improve strategic business decisions. Through this program, students learn how to collect, analyze and visually represent rich sets of data designed to improve organizational decision making.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ BUS 540 Strategic Management of Innovative Technology (3 credits)
- ▶ BUS 563 Data Analytics (3 credits)
- ▶ BUS 564 Big Data and Visualization (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Data Analytics, students will be able to:

1. Formulate technology innovation strategies to communicate strategic data driven business recommendations to stakeholders.
2. Use data analytics and visualization to improve, illustrate, and monitor organizational performance, while furthering the vision.

## Policies Specific to the Graduate Certificate in Data Analytics

Policies and procedures that apply specifically to the Graduate Certificate in Data Analytics are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all Data Analytics certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Data Analytics have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Distributed Workforce Management

9  
CREDITS

## Certificate Description

The Graduate Certificate in Distributed Workforce Management will train students to strategically lead decisively across all functions in organizations, including recruitment and selection, training and development, performance appraisals, health and safety, labor relations, and communications. Graduates will be prepared to fulfill senior and executive positions in the private, public and the non-profit sectors. Students will create value for the organizations and communities they serve by solving the complex challenges related to managing within a distributed work environment.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ BUS 553 Organizational Behavior (3 credits)
- ▶ BUS 561 Virtual Training and Development (3 credits)
- ▶ BUS 562 Virtual Team Management (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Distributed Workforce Management, students will be able to:

1. Emphasize research as vital in both academic and applied settings.
2. Collaborate on projects and case analyses with peers while incorporating feedback from outside sources.
3. Focus the application of distributed workforce in a variety of organizations, including health care and nonprofits.
4. Apply managerial skills to help them begin as well as advance their career in distributed workforces.
5. Integrate diversity, equity, and inclusion into content and andragogy on distributed workforce management.
6. Shape corporate policy, organizational change, and transformation as a consequence of distributed work.

Continued on next page

## Policies Specific to the Graduate Certificate in Distributed Workforce Management

Policies and procedures that apply specifically to the Graduate Certificate in Distributed Workforce Management are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all Distributed Workforce Management certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Distributed Workforce Management have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Homeland Security and Emergency Management

9  
CREDITS

## Certificate Description

Few areas of public safety generate broad and intense interest as matters of homeland security and emergency management. Ensuring the safety and security of a nation's homeland—its infrastructure, its institutions, its economy, and most importantly, its people—is a prerequisite for success in all other aspects of societal life. This certificate program teaches students about threats posed by domestic and international terrorism and strategies for countering those threats. Additionally, students will evaluate the best practices behind successful security planning and create threat assessments. Finally, students will evaluate and develop emergency and disaster plans that can and should be employed in the face of both man-made and natural threats to the homeland.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ MCJ 630 Risk Assessment in Homeland Security and Emergency Management (3 credits)
- ▶ MCJ 651 Overview: Homeland Security and Emergency Management (3 credits)
- ▶ MCJ 650 Terrorism and Counterterrorism (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Homeland Security and Emergency Management, students will be able to:

1. Analyze and evaluate contemporary homeland security issues as they relate to criminal justice based on an understanding of the domestic and international processes affecting homeland security.
2. Construct an argument for the relationship between the current theories of emergency management and their practical application within the American Criminal Justice System.
3. Evaluate risks associated with human-caused, natural, and technological disasters through a myriad of risk management approaches, including best practices used by the homeland security enterprise.

Continued on next page

## Policies Specific to the Homeland Security and Emergency Management

Policies and procedures that apply specifically to the Graduate Certificate in Homeland Security and Emergency Management are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Homeland Security and Emergency Management have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Leadership

12  
CREDITS

## Certificate Description

The Graduate Certificate in Leadership helps new and aspiring leaders to develop a versatile set of leadership skills and to inspire high-performing teams in a complex world. Through an interdisciplinary approach, students learn about applied leadership theory, strategic talent management, and driving team performance.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ IND 501 An Interdisciplinary Approach to Ethical Leadership (3 credits)
- ▶ IND 502 Strategic Talent Management in a Complex World (3 credits)
- ▶ IND 522 Leading High Performing Teams (3 credits)
- ▶ Elective—Select one:
  - ▶ IND 503 Data Driven Decision Making (3 credits)
  - ▶ HSC 516 Communication Strategy for the Health Care Leader (3 credits)
  - ▶ PBH 592 Biostatistics (3 credits)
  - ▶ MPA 502 Public Management in a Political Environment (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Leadership, students will be able to:

1. Use leadership theory and data-driven decision-making to cultivate equitable, inclusive organizations.
2. Apply ethical principles in leading teams and influencing sustainable change.
3. Collaborate within and across disciplines and stakeholder groups to lead change initiatives.

## Policies Specific to the Graduate Certificate in Leadership

Policies and procedures that apply specifically to the Graduate Certificate in Leadership are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Leadership have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

**College of Liberal Arts and Sciences**  
**SCHOOL OF TECHNOLOGY**  
*Degree and Certificate Programs*

## College of Liberal Arts and Sciences

### SCHOOL OF TECHNOLOGY

#### *Mission Statement*

---

The School of Technology leads in providing students an ethically centered, multidisciplinary, and multimodal technical education through innovative learning that meets the future-focused needs of industry and society.

#### *Vision Statement*

---

The School of Technology cultivates the next generation of leaders by blending technical expertise with practical wisdom and ethical insight. Through innovative programs, hands-on experiences, and industry collaborations, we empower learners across disciplines to thrive in today's technological landscape. We foster a culture of excellence where everyone can contribute and thrive, fully equipped to meet the challenges and opportunities of tomorrow.

# Associate in Applied Science in Computer Technologies

## Overview

The program focuses on preparing students for technician roles in computer technology-related industries. The goal of the program is to foster the ability of students to apply their knowledge from the degree program to real-world contexts of computer technology-based industries. The general education requirements ensure the student develops college-level competence in arts and sciences areas, including humanities, social sciences/history, and natural sciences/math.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 60**

**Arts and Sciences Requirements: 20 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**University Requirements: 4 credits**

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3

**General Education Requirements: 21 credits**

COURSE NAME	Credits
<b>ENG 101A Advanced Composition</b>	3
<b>IND 203 Introduction to Professional Ethics</b> This topic is required to meet the specified requirement.	3
<b>COMM 210 Interpersonal Communication</b>	3

**General Education Requirements: 21 credits**

(continued from previous page)

COURSE NAME	Credits
PSY 101 Introduction to Psychology I	3
SOC 101 Introduction to Sociology	3
NS 110 Science in Today's World	3
MAT 114 Intermediate Algebra	3

A minimum grade of C or higher is required for all General Education requirements. The preferred and required courses for this degree program are listed above.

**Major Core Requirements: 27 credits**

COURSE NAME	Credits
TECH 230 Technology and Society This requirement must be completed at Excelsior University.	3
TECH 200 Technical Writing	3
IT 221 Introduction to Computers	3
IT 200 Hardware and Software Essentials	3
IT 380 Overview of Computer Security	3
IT 211 Fundamentals of Programming	3
IT 250 Business Data Communications	3
CYS 220 Cloud Computing and Virtualization	3
TECH 290 Integrated Technology Assessment AAST This requirement must be completed at Excelsior University.	3

A minimum grade of C is required for all Major Core requirements.

**Elective Requirements: 8 credits**

Additional credits needed to fulfill the program requirements in any academic area.

Continued on next page

## Program Learning Outcomes

Upon completion of the Excelsior University Associate in Applied Science in Computer Technologies program, students will be able to:

1. Demonstrate effective technical oral and written communication skills.
2. Demonstrate introductory college-level proficiency in one or more of the subject areas in mathematics and/or natural sciences.
3. Demonstrate introductory college-level proficiency in one of more of the social sciences.
4. Critically examine relationships between technology and society through cultural diversity and human behavior.
5. Apply technology and problem-solving skills in the concentration area.

# Associate in Applied Science in Technical Studies

## Overview

The program focuses on preparing students for technician roles in engineering technology-related industries. The program has two technical concentrations: **Electrical Technologies** and **Nuclear Technologies/Power Plant Technologies**. The goal of the program is to foster the ability of students to apply their knowledge from the degree program to real-world contexts of an engineering technology-based industry. The general education requirements ensure the student develops college-level competence in arts and sciences areas, including humanities, social sciences/history, and natural sciences/math.

The **Electrical Technologies concentration** provides students with a comprehensive education that combines both theoretical knowledge and hands-on experience. Students gain a solid understanding of electrical safety practices, blueprint reading, and the principles of electrical systems. This concentration is designed to prepare graduates for a variety of entry-level roles in residential, commercial, and industrial electrical work.

The **Nuclear Technologies/Power Plant Technologies concentration** provides a comprehensive foundation in nuclear power generation and plant operations. Key courses include Energy Industry Fundamentals, Health Physics and Radiation Protection, and Power Plant Components, offering students a deep understanding of the energy sector and the technical skills required for safe and efficient nuclear plant operations. Students learn about nuclear reactor systems, applicable regulations, concepts of control performance, human interface, and quality assurance as they relate to the operation and maintenance of nuclear systems. Emphasis is placed on regulatory compliance, environmental stewardship, and maintaining high standards of health and safety. This concentration prepares students for technician/operator positions in the nuclear industry.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 60**

**Arts and Sciences Requirements: 20 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

Continued on next page

## Program Learning Outcomes

Upon completion of the Excelsior University Associate in Applied Science in Technical Studies program, students will be able to:

1. Demonstrate effective technical oral and written communication skills.
2. Demonstrate introductory college-level proficiency in one or more of the subject areas in mathematics and/or natural sciences.
3. Demonstrate introductory college-level proficiency in one or more of the social sciences.
4. Critically examine relationships between technology and society through cultural diversity and human behavior.
5. Apply technology and problem-solving skills in the concentration area.

## Concentration Learning Outcomes

### Electrical Technologies Concentration

Upon completion of the **Electrical Technologies concentration**, students will be able to:

1. Safely work with electrical systems, utilizing proper protective equipment and adhering to safety regulations.
2. Interpret and analyze electrical diagrams and blueprints for accurate installation and troubleshooting.
3. Apply fundamental electrical theory to design, install, and maintain electrical circuits and systems.
4. Diagnose and repair common electrical issues using appropriate tools and testing equipment.

### Nuclear Technologies/Power Plant Technologies Concentration

Upon completion of the **Nuclear Technologies/Power Plant Technologies concentration**, students will be able to:

1. Operate and maintain key systems in nuclear power plants.
2. Implement radiation protection and health physics practices to ensure worker and public safety.
3. Understand and apply industry regulations and environmental protections.
4. Identify key principles in the proper operation, testing, and troubleshooting of boilers, turbines, electric generators, pumps, and other auxiliary equipment.
5. Work in various roles within nuclear power plants, energy production facilities, and other related industries, ensuring the safe, efficient, and compliant generation of energy.

# Bachelor of Professional Studies in Information Technology Management

## Overview

The Bachelor of Professional Studies in Information Technology Management program emphasizes developing the knowledge, skills, attitudes, and values required for a person to meet the demands of a technical computer workforce. The program provides a broad professional foundation in the functional components of information technology and management. The general education requirements ensure the student develops college-level competence in arts and sciences areas including humanities, social science/history, and natural sciences/math. Credits may be earned through courses or transferred from accredited, degree-granting institutions or approved examination programs.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 30 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**Upper-Level Requirements: 30 credits**

The minimum number of credits needed at the upper level for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Professional Studies in Information Technology Management program, students will be able to:

1. Demonstrate effective technical, oral, and written communication skills.
2. Demonstrate introductory college-level proficiency in one or more subject areas in mathematics and/or natural sciences.
3. Demonstrate introductory college-level proficiency in one or more social sciences.
4. Critically examine relationships between technology and society through cultural diversity and human behavior.
5. Apply technology and problem-solving skills in the major core.

# Bachelor of Professional Studies in Technology Management

## Overview

The Bachelor of Professional Studies in Technology Management program emphasizes developing the knowledge, skills, attitudes, and values required for a technical person to meet the demands of a technical workforce. The program provides a broad professional foundation in the functional components of technology and management. The program has concentrations in electrical technology, nuclear technology, and renewable energy technology. The general education requirements ensure the student develops college-level competence in arts and sciences areas including humanities, social science/history, and natural sciences/math. Credits may be earned through courses or transferred from accredited, degree-granting institutions or approved examination programs.

The **Nuclear Technology concentration** equips students with the knowledge and skills to manage and support nuclear power generation and related industries. Students gain a strong foundation in nuclear physics, radiation protection, reactor operations, and safety procedures. Coursework focuses on energy production, health physics, regulatory compliance, and environmental considerations. Graduates are prepared for careers in nuclear power plants, regulatory agencies, and energy research sectors, with an emphasis on leadership and management roles in nuclear technology.

The **Electrical Technology concentration** provides students with expertise in electrical systems, power distribution, and industrial automation. Students explore topics such as circuit analysis, electrical safety, blueprint reading, and power systems management. The curriculum integrates technical knowledge with business and management principles, preparing graduates for supervisory and technical roles in electrical contracting, facility management, and energy distribution.

The **Renewable Energy Technology** concentration prepares students to lead in the rapidly evolving field of sustainable energy. Students learn about solar, wind, and other renewable energy systems, energy storage solutions, and grid integration. The program emphasizes energy efficiency, sustainability practices, and the economic and regulatory aspects of renewable energy technologies. Graduates are well-positioned for careers in energy project management, consulting, and operations within the renewable energy sector.

<b>TECH 490 Technology Management Capstone: Integrated Technology Assessment (ITA)</b> This requirement must be completed at Excelsior University.	3

A minimum grade of C is required for all Major Core requirements.

**CONCENTRATION REQUIREMENTS: 15–16 CREDITS***One of the following must be declared.***Electrical Technology**

COURSE NAME	Credits
<b>TECH 180 Personal Protection Equipment for Electrical Work</b>	3
<b>TECH 185 Blueprint Reading</b>	3
<b>TECH 225 Applied Instrumentation and Control</b>	3
<b>TECH 233 Electrical Power Distribution</b>	3
<b>NUC 255 Electrical Theory</b>	3

**Renewable Energy Technology**

COURSE NAME	Credits
<b>NUC 260 Power Plant Components</b>	3
<b>TECH 250 Renewable Energy Overview I: Solar and Geothermal</b>	3
<b>TECH 251 Renewable Energy II: Wind and Water</b>	3
<b>TECH 260 Energy Industry Fundamentals</b> This requirement must be completed at Excelsior University.	3
<b>NUC 255 Electrical Theory</b>	3

## Nuclear Technology

COURSE NAME	Credits
NUC 210 Health Physics and Radiation Protection	3
NUC 240 Atomic and Nuclear Physics	4
NUC 245 Thermodynamics	3
NUC 330 Reactor Core Fundamentals	3
NUC 350 Plant Systems Overview This requirement must be completed at Excelsior University.	3

A minimum grade of C is required for all Concentration requirements.

## Elective Requirements: 12 credits

Additional credits needed to fulfill the program requirements in any academic area.

A minimum grade of C is required for all Electives requirements.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Professional Studies in Technology Management program, students will be able to:

1. Apply knowledge of mathematics and natural sciences to problem-solving in technology management contexts.
2. Develop cohesive written and oral arguments in your technical concentration using appropriate supporting evidence.
3. Critically evaluate and propose solutions for technology management problems.
4. Critically evaluate the ethical, legal, and social implications associated with the management of technology in your concentration field.
5. Participate effectively in diverse teams to address technical issues in your technology concentration.
6. Apply project management tools and techniques to plan, manage, and close a project in the applicable technology field.
7. Apply computer applications or computer software packages to solve technical problems in your technical concentration.

Continued on next page

8. Apply technological and management concepts in an integrated manner using both local and global perspective.
9. Employ critical thinking skills to interpret and analyze competing arguments and multiple perspectives in a technology environment.
10. Evaluate your individual strengths and weaknesses with the desire to update skills and continuously improve.

## Concentration Learning Outcomes

### Electrical Technology Concentration

1. Identify, formulate, and present solutions to a variety of technical problems in the area of electrical technology.
2. Demonstrate competency in the analysis, interpretation, and application of data in the area of electrical technology.

### Nuclear Technology Concentration

1. Demonstrate a proficiency in the operation and maintenance of nuclear processes and systems.
2. Demonstrate a proficiency in the applicable rules, regulations, and procedures pertaining to radiological safety and radiation protection.
3. Identify the key principles in the proper operation, testing, and troubleshooting of turbines, electric generators, pumps, and other auxiliary plant equipment.

### Renewable Energy

1. Identify and discuss renewable energy technologies being used commercially and residentially.
2. Perform an analysis of political and economic influences on the renewable energy business.

# Bachelor of Science in Computer Science

## Overview

The Bachelor of Science in Computer Science program is meticulously designed to equip students with a robust foundation in computer science theory coupled with practical skills in software development and systems management. The curriculum is structured to provide a holistic education that prepares students not only for technical challenges but also for the societal and ethical dimensions of computing. Students must be able to demonstrate competence in the use of standard design practices, tools, techniques, and computer hardware and software appropriate to the computer science discipline and the program goals.

Program concentrations include **Artificial Intelligence**, **Data Science**, **Networking and Cloud Computing**, and **Software Development**.

The **Artificial Intelligence concentration** immerses students in cutting-edge AI technologies, equipping them to become proficient AI practitioners and ethical AI stewards. Through interdisciplinary courses and hands-on projects, students explore foundational principles and advanced techniques, including machine learning, natural language processing (NLP), computer vision, and deep learning. Emphasizing responsible AI development and ethical considerations, students critically examine societal impacts and navigate complex ethical dilemmas. Collaborative projects hone problem-solving and critical thinking skills, preparing students to drive innovation and make positive contributions to society while upholding ethical principles in the rapidly evolving field of artificial intelligence.

The **Data Science concentration** empowers students with the knowledge and skills necessary to thrive in the dynamic realm of data science while prioritizing social impact and ethical considerations. Through a blend of theoretical learning and hands-on projects, students delve into data collection, preprocessing, analysis, and interpretation using statistical methods, machine learning algorithms, and big data technologies. With a strong emphasis on ethical practices, students explore the societal implications of data usage, including issues of privacy, bias, and fairness. Collaborative projects provide practical experience and foster essential communication, teamwork, and leadership skills. Graduates are poised to pursue diverse career paths in data analysis, machine learning, and business intelligence, and equipped to drive innovation and make meaningful contributions to society while upholding ethical principles in a data-driven world.

The **Networking and Cloud Computing concentration** equips students with the knowledge and skills required to design, implement, and manage robust network infrastructures and cloud-based solutions while emphasizing ethical practices and social impact. Through a blend of theoretical learning and hands-on projects, students explore fundamental principles and advanced technologies in networking, cloud architecture, virtualization, and cybersecurity. With a focus on scalability, reliability, and security, students gain practical experience in configuring network devices, deploying cloud services, and implementing cybersecurity measures, all while considering ethical considerations and

societal impacts. Upon completion, graduates are prepared to pursue careers as network engineers, cloud architects, or cybersecurity specialists, contributing to the evolving landscape of networking and cloud computing with expertise and a commitment to ethical practices and social responsibility.

The **Software Development concentration** equips students with the knowledge and skills essential for thriving in the dynamic field of software engineering, with a focus on creating positive social impact. Through a blend of theoretical learning and hands-on projects, students delve into fundamental software design principles, methodologies, and industry-standard practices. Emphasizing collaboration, innovation, and ethical considerations, students gain practical experience in designing, developing, and maintaining robust, secure, and scalable software solutions that address societal challenges. Upon completion, graduates are equipped to pursue careers as software engineers, developers, or consultants, contributing to the advancement of technology with expertise, creativity, and a commitment to excellence while making meaningful contributions to society.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**Upper-Level Requirements: 30 credits**

The minimum number of credits needed at the upper level for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

COURSE NAME	Credits
CS 417 Software Engineering and Practice	3
CS 311 Software Design and Architecture	3
CS 415 Software Testing and Quality Assurance	3
CS 411 Software Project Management	3
CS 419 Software Maintenance and Evolution	3

A minimum grade of C or higher is required for all Concentration requirements.

## Arts and Science Electives: 12 credits

Additional credits needed to fulfill the program requirements in the arts and sciences.

## Elective Requirements: 2 credits

Additional credits needed to fulfill the program requirements in any academic area.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Computer Science program, students will be able to:

1. Execute approaches to develop or deploy computer systems and processes that address societal and industry challenges using both current and future leaning technologies.
2. Employ a holistic and interdisciplinary perspective in developing and implementing computer solutions.
3. Demonstrate leadership through a combination of technical skills, interpersonal skills, and industry models to implement solutions that address societal and industry needs.
4. Engage in collaborative projects to implement teamwork and communication skills while considering individuals' perspective and life experience in a global community.
5. Apply learned skills to real-world projects, integrating critical thinking and ethical reasoning to ensure a positive impact on the business, industry, and society.

## Concentration Learning Outcomes

Upon completion of the **Artificial Intelligence concentration**, students will be able to:

1. Explain the principles of supervised learning, unsupervised learning, and reinforcement learning algorithms, as well as foundational principles of Natural Language Processing and computer vision technologies.
2. Demonstrate proficiency in utilizing popular machine learning frameworks, implementing machine learning algorithms on real-world datasets, and articulating the underlying principles of advanced Natural Language Processing tasks and computer vision algorithms while critically evaluating their societal implications.
3. Analyze the societal implications of AI technologies on diverse demographic groups, assess the societal impact of responsible vs. irresponsible AI development, evaluate the effectiveness of legal frameworks in addressing ethical concerns in AI, and propose strategies to mitigate bias and enhance fairness in AI algorithms.
4. Illustrate key findings from AI model outputs with diverse visualizations, assess the societal implications of Natural Language Processing, analyze the broader implications of computer vision technologies considering ethical considerations and societal impact, and evaluate the effectiveness of different neural network architectures in solving complex problems and addressing ethical concerns.
5. Apply machine learning algorithms and Natural Language Processing techniques in practical scenarios across diverse contexts, evaluate responsible and ethical AI guidelines such as fairness, accountability, transparency, and explainability (FATE), and identify potential societal implications of deep learning technologies.
6. Integrate insights from case studies and practical experiences to form a holistic perspective of the ethical dimensions within neural networks and deep learning.

Upon completion of the **Data Science concentration**, students will be able to:

1. Explain fundamental concepts and theories in data science, including data preprocessing, statistical analysis, machine learning, and big data analytics.
2. Demonstrate proficiency in selecting and applying statistical methods and tools to analyze data, interpret results, and derive meaningful insights for decision-making purposes while effectively translating theoretical concepts into practical skills by applying data science techniques and methodologies to solve real-world problems.
3. Demonstrate proficiency in identifying, analyzing, and proposing data-driven solutions to real-world problems across various domains, showcasing competence in implementing both basic and advanced machine learning techniques to analyze data, build predictive models, and extract valuable insights to support decision-making processes while emphasizing problem-solving skills and critical thinking.
4. Effectively communicate data analysis results, insights, and recommendations to diverse stakeholders, including technical and non-technical audiences, through written reports, oral presentations, and data visualizations.

Continued on next page

5. Critically evaluate the ethical implications of data collection, preprocessing, analysis, and interpretation, demonstrating a commitment to responsible data practices and considering societal impacts, equity, and biases.
6. Collaborate effectively in multidisciplinary teams to tackle complex data science projects, demonstrating teamwork, communication, and leadership skills while considering diverse perspectives and leveraging individual strengths.

Upon completion of the **Networking and Cloud Computing concentration**, students will be able to:

1. Articulate the pros and cons of different cloud deployment models, explain the fundamental principles of networking and cloud computing, articulate foundational concepts underlying virtualization technologies, and explain the theoretical basis for network security principles.
2. Assess the implications of virtualization on system security and reliability, identify areas for optimization in system performance, perform hands-on tasks to set up and customize virtualized resources, assess cloud storage technologies, and implement encryption mechanisms effectively.
3. Discuss the societal and environmental impacts of cloud computing, evaluate design choices in the broader context of network and cloud computing, evaluate innovative approaches and solutions in virtualization and containerization, analyze the alignment of cloud networking and storage with business requirements and global policy, and develop access control policies across network and cloud services.
4. Analyze the suitability of different cloud service models for real-world scenarios, assess the potential benefits and challenges of integrating innovative technologies, communicate ethical considerations associated with virtualization and containerization technologies, and develop comprehensive, integrated solutions for cloud networking and storage considering diverse national laws and data jurisdiction.
5. Evaluate the adaptability of security strategies to changes in technology landscapes and emerging threats, analyze the intersection of traditional network design principles with emerging technologies, analyze how virtualization and containerization technologies contribute to societal transformations, identify issues of data sovereignty and privacy compliance within global cloud environments, and formulate security policies aligning with industry standards and best practices.
6. Critique the role of cloud technologies in promoting digital inclusion, job creation, and innovation, while considering potential challenges.

Upon completion of the **Software Development concentration**, students will be able to:

1. Identify fundamental design principles, evaluate design patterns, analyze testing strategies, utilize software development-centric approaches in project planning and management, and improve existing software code with refactoring techniques.
2. Analyze the ethical dimensions of design decisions, implement proactive security measures, analyze software performance and security, and integrate ethical guidelines into the software development life cycle.

Continued on next page

3. Analyze software performance and design decisions, apply contemporary software architectural practices, evaluate quality assurance practices, demonstrate strategies for building and maintaining project teams, and analyze documentation alignment with industry standards.
4. Integrate knowledge of emerging technologies, craft secure and scalable software systems, communicate the pros and cons of testing techniques, develop guidelines for future-proofing software systems, and create ethical guidelines for software development.
5. Engage in reflective analysis of project outcomes, implement security measures in software design, evaluate software development case studies, design comprehensive project plans, and create coding standards that promote sustainable software development practices.
6. Demonstrate the ability to balance competing priorities within defined business constraints.

# Bachelor of Science in Cybersecurity

## Overview

The Bachelor of Science in Cybersecurity program is aligned with the academic requirements for cybersecurity set by the National Security Agency (NSA) and Department of Homeland Security (DHS) and will provide students with the ability to enhance technical knowledge and skills in cybersecurity. The program is designed to prepare learners for cybersecurity-related jobs in the U.S. Cyber Command, the NSA's signal intelligence operations, the Federal Bureau of Investigation, law enforcement agencies, and corporate environments. As Excelsior is a Center of Academic Excellence in Cyber Defense (CAE-CD), the program supports the belief of the NSA that cybersecurity should be integrated in all aspects of a person's career. The degree program begins to prepare the student to take several industry certification exams such as CISP, CEH, Security+, Network+, CHFI, SSCP, and ESCP. Typical occupational areas associated with cybersecurity include incident response analyst, cyber compliance analyst, cyber threat management, cyber network operations planner, cyber systems analyst, systems administrator, and cyber systems and operations engineer.

Program concentrations include **Cyber Operations** and **General**.

The **Cyber Operations concentration** equips students with the necessary skills to address advanced cyber threats, cybercrime, and terrorism. This track focuses on both technical and organizational aspects of cybersecurity, including understanding the behavior of organizations, reverse engineering, and large-scale cybercrime.

The **General concentration** provides a broad understanding of cybersecurity principles and practices, equipping students with essential skills for securing diverse technological environments. This flexible concentration allows students to tailor their coursework to fit individual career goals, drawing from a variety of areas, including business continuity, computer forensics, and securing mobile and cloud environments. Students may also choose from courses offered in the Cyber Operations concentration to deepen their expertise in specific areas of interest.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE, HYBRID**

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Cybersecurity, students will be able to:

1. Describe defensive network architecture that use multiple layers of protection.
2. Analyze technologies and processes that monitor, maintain, and protect the data of an institution.
3. Evaluate and apply industry tools to respond to cyber incidents.
4. Create and disseminate cybersecurity reports to stakeholders.
5. Conduct risk and vulnerability assessments of existing and proposed security systems.
6. Develop and implement organizational cybersecurity policies and procedures.
7. Demonstrate the ability to understand professional, ethical, and social responsibility, including the effect of culture, diversity, and interpersonal relations.
8. Demonstrate proficiency in communicating technical information in formal reports, documentation, and oral presentations to users and information technology professionals.
9. Demonstrate a commitment to professional development and to continue to engage in lifelong learning.

## Concentration Learning Outcomes

Upon completion of the **Cyber Operations concentration**, students will be able to:

1. Develop the skills to assess, identify, and defend against sophisticated cyber threats, cybercrime, and terrorism, using advanced technical tools and methodologies.
2. Demonstrate the ability to deconstruct and analyze software and hardware systems to discover potential vulnerabilities, exploits, and malicious code.
3. Evaluate and apply organizational security frameworks to safeguard critical data and infrastructure within various business and governmental environments.
4. Design and implement effective cybersecurity strategies to address large-scale cybercrime and terrorism, ensuring national and organizational security.
5. Develop the interpersonal and leadership skills necessary to work in cybersecurity operations teams, understanding organizational behavior and its impact on security strategies.

Upon completion of the **General Cybersecurity concentration**, students will be able to:

1. Acquire a foundational knowledge of cybersecurity concepts, techniques, and frameworks applicable to various technological and organizational environments.
2. Gain the skills to identify security risks and implement protective measures for mobile and cloud platforms, ensuring the integrity and confidentiality of data.

Continued on next page

3. Design and implement business continuity plans to ensure organizational resilience and minimize downtime during and after cyber disruptions.
4. Develop the ability to investigate, analyze, and interpret digital evidence in the context of cyber-crime and legal processes, contributing to incident response and legal compliance.
5. Demonstrate flexibility in applying cybersecurity strategies to various industries and roles, ensuring effective defense mechanisms tailored to specific environments.

# Bachelor of Science in Electrical Engineering Technology

## Overview

The Bachelor of Science in Electrical Engineering Technology program equips students with the practical and theoretical skills needed for careers in technology-driven industries such as electronics, electrical power, semiconductors, and computing. Designed to enhance both technical proficiency and professional versatility, the program offers two specialized concentrations that provide a strong foundation in core electrical engineering technology principles. The general education requirements ensure students develop college-level competence in arts and sciences areas, including humanities, social sciences/history, and natural sciences/math.

Program concentrations include **Electronics** and **Power Systems**.

The **Electronics concentration** focuses on the design and application of electronic systems used in communication, control, and embedded technologies. Students develop expertise in digital and analog electronics, microcontroller programming, and system integration. This concentration is ideal for those pursuing careers in consumer electronics, telecommunications, embedded systems, and digital hardware development.

The **Power Systems concentration** equips students with the knowledge and skills needed to work in the generation, transmission, and distribution of electrical power. It emphasizes practical and theoretical understanding of power system components, industrial automation, and energy infrastructure. Students are prepared for careers in utility companies, manufacturing plants, and other sectors that rely on electrical power systems.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE, HYBRID**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

ELEC 370 Instrumentation and Data Acquisition	3

A minimum grade of C is required for all Concentration requirements.

**Lab Requirements**

Students must complete at least seven technology lab experiences **demonstrating competency** in circuit analysis, electronics, and microprocessor applications. At least four labs must cover the following areas or their approved equivalents: DC Circuits, AC Circuits, Digital Electronics, Electronics I, Electronics II, Microprocessors. The other three labs must be within the student's concentration.

Continued on next page

## Upper Level Arts and Sciences Electives: 3 credits

Additional upper level credits needed to fulfill the program requirements in the arts and sciences.

## Elective Requirements: 3 credits

Additional credits needed to fulfill the program requirements in any academic area.

## Program Educational Objectives

As an Excelsior University bachelor's-level electrical engineering technology graduate, within a few years of graduation, students are expected to:

1. Apply general and discipline-specific concepts and methodologies to identify, analyze, and solve technical problems in the electrical discipline.
2. Demonstrate an individual desire and commitment to remain technically current with, and adaptive to, changing technologies through continuous learning and self-improvement.
3. Demonstrate independent thinking, function effectively in team-oriented settings, and maintain a high level of performance in a professional/industrial environment.
4. Communicate effectively in written and oral forms in a professional/industrial environment.
5. Perform ethically and professionally in business, industry, and society.
6. Demonstrate and utilize leadership principles in the field of electrical engineering technology.

## Program (Student) Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Electrical Engineering Technology program, students will be able to:

1. Apply knowledge, techniques, skills and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to the electrical engineering technology discipline.
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly defined engineering problems appropriate to the electrical engineering technology discipline.
3. Apply written, oral, and graphical communication in broadly defined technical and non-technical environments; and be able to identify and use appropriate technical literature.
4. Conduct standard tests, measurements, and experiments and be able to analyze and interpret the results to improve processes.
5. Function effectively as a member as well as a leader on technical teams and apply project management techniques in team project activities.

Continued on next page

## Concentration Learning Outcomes

Upon successful completion of the **Electronics concentration**, students will be able to:

1. Analyze and design different types of digital and analog electronic communication systems.
2. Design, integrate, and analyze digital and analog control systems.
3. Use high-level computer languages to develop techniques for designing and modeling electronic systems.

Upon successful completion of the **Power Systems concentration**, students will be able to:

1. Identify, analyze, and discuss methods used for generation, transmission, and control of electric power.
2. Design, integrate, and analyze DC/AC power conversion systems and related instrumentation.
3. List and describe techniques for analysis and design of power electronics systems.

# Bachelor of Science in Information Technology

## Overview

The Bachelor of Science in Information Technology program focuses on preparing students to stay at the forefront of the rapidly changing technical environment and trains students to be the leaders in the information technology field. The program is centered on the fundamental concepts, skills, applications, and practices across a wide variety of information technology domains, including software and web development, computer systems, database management, data communication, information security, and project management.

Program concentrations include **Network Operations**, **Cybersecurity Technology**, and **General**.

The **Network Operations concentration** prepares students for careers in network administration, systems operations, and IT infrastructure management. Students learn how to design, implement, and manage complex network systems, including both wired and wireless technologies. Coursework covers advanced networking concepts, operating systems, telecommunications management, and network security, providing the technical foundation to support enterprise-level IT environments.

The **Cybersecurity Technology concentration** equips students with practical knowledge and skills to protect organizational systems and data. Courses explore information security principles, cyber threats and defense mechanisms, incident response, forensic investigation, and secure network and application design. This concentration aligns with industry-recognized competencies and prepares graduates for roles in cyber defense, risk management, and IT security operations.

The **General concentration** offers a flexible pathway for students to customize their studies across multiple IT domains. This concentration includes courses in hardware and software, secure coding practices, wireless technologies, digital forensics, and cloud computing. It is ideal for students seeking a broad education in information technology or looking to tailor their coursework to emerging trends and specific career goals.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

## Upper-Level Requirements: 30 credits

The minimum number of credits needed at the upper level for the degree.  
Refer to [Graduation Requirements on page 26](#) for more information.

## University Requirements: 4 credits

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3

## General Education Requirements: 33 credits

COURSE NAME	Credits
<b>ENG 101A Advanced Composition</b>	3
<b>TECH 200 Technical Writing</b>	3
<b>IND 203 Introduction to Professional Ethics</b> This topic is required to meet the specified requirement.	3
<b>COMM 125 Public Speaking</b> This topic is required to meet the specified requirement.	3
<b>HUM 307 Critical Thinking</b>	3
<b>PSY 101 Introduction to Psychology I</b>	3
<b>SOC 101 Introduction to Sociology</b>	3
<b>PSY 360 Social Psychology</b>	3
<b>NS 110 Science in Today's World</b>	3
<b>MAT 114 Intermediate Algebra</b> This topic is required to meet the specified requirement.	3
<b>MAT 205 Discrete Structures</b> This topic is required to meet the specified requirement.	3

A minimum grade of C or higher is required for all General Education requirements. The above are the preferred courses; however, course topics with a footnote are required for this degree program.

**Concentration Requirements: 15 credits**  
*One of the following must be declared.*

### Network Operations

COURSE NAME	Credits
IT 422 Advanced Networking	3
IT 424 Network Operating Systems	3
IT 426 Wireless Technology	3
IT 428 Telecommunications Management	3
IT 430 Network Systems Design and Management	3

### Cybersecurity Technology

COURSE NAME	Credits
CYS 401 Organizational Information Security	3
CYS 426 Cyber Attacks and Defenses	3
CYS 455 Business Continuity	3
IT 406 Computer Forensics	3
CYS 403 Network and Application Security	3

### General

Students can choose from approved elective courses to meet the General concentration requirements. Our course offerings cover a wide range of IT specialties, which helps students stay competitive in today's job market. The following Excelsior courses are recommended.

COURSE NAME	Credits
IT 200 Hardware and Software Essentials	3
CYS 470 Secure Software Development	3
IT 406 Computer Forensics	3
IT 426 Wireless Technology	3
CYS 220 Cloud Computing and Virtualization	3

A minimum grade of C or higher is required for all Concentration requirements.

Continued on next page

## Arts and Sciences Electives: 18 credits

Additional credits needed to fulfill the program requirements in the arts and sciences.

## Elective Requirements: 2 credits

Additional credits needed to fulfill the program requirements in any academic area.

## Program Educational Objectives

As an Excelsior University bachelor's-level information technology graduate, within a few years of graduation, you are expected to:

1. Apply general and discipline-specific concepts and methodologies to identify, analyze, and solve technical problems in the information technology discipline.
2. Demonstrate an individual desire and commitment to remain technically current with, and adaptive to, changing technologies through continuous learning and self-improvement.
3. Demonstrate independent thinking, function effectively in team-oriented settings, and maintain a high level of performance in a professional/industrial environment.
4. Communicate effectively in a professional/industrial environment.
5. Perform ethically and professionally in business, industry, and society.
6. Demonstrate and utilize leadership principles in the field of information technology.

## Program (Student) Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Information Technology program, students will be able to:

1. Analyze a complex computing problem and apply principles of computing and other relevant disciplines to identify solutions
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Identify and analyze user needs and take them into account in the selection, creation, integration, evaluation, and administration of computing-based systems.

Continued on next page

## Concentration Learning Outcomes

Upon completion of the **Network Operation concentration**, students will be able to:

1. Apply advanced networking techniques and network operating system principles toward the operation of a robust network.
2. Integrate wireless technology solutions into the network infrastructure.
3. Apply telecommunication management principles into the management of networks.

Upon completion of the **Cybersecurity Technology concentration**, students will be able to:

1. Apply cybersecurity best practices in managing various computing environments comprised of heterogeneous devices and services.
2. Define and protect data assets in organizations by mitigating risks and integrating business continuity.
3. Identify and analyze the impact of large scale cybercrime incidents on international security and terrorism.

## Degree-Specific Policies

Policies and procedures that apply specifically to the Bachelor of Science in Information Technology follow.

### Programming Language Cap

Excelsior University has placed a 9-credit cap on introductory programming language courses in the Major Core or Concentration, which includes the following languages:

- ▶ JAVA
- ▶ PYTHON
- ▶ Visual Basic
- ▶ C
- ▶ C++
- ▶ C#

No upper-level credit is awarded for coursework in introductory computer languages.

# Bachelor of Science in Mechanical Engineering Technology

## Overview

The Bachelor of Science in Mechanical Engineering Technology program provides students with a comprehensive understanding of complex systems, emphasizing problem-solving skills for careers spanning design, installation, manufacturing, testing, technical sales, innovation, and maintenance of mechanical components and systems. Focused on the mechanics behind system functionality and production methods, the program addresses complex systems and emerging technological advancements, including those in artificial intelligence, automation, robotization, 3D printing, machine learning, and big data. With a commitment to tackling societal challenges, students gain problem-solving and design expertise to innovate, engineer, implement, and maintain cost-effective solutions in mechanical engineering technology. The program culminates in a multidisciplinary capstone experience, involving collaborative team projects, formal design, implementation, and rigorous validation and testing procedures. Graduates are prepared for employment across diverse industries such as aerospace, automotive, construction, defense, consumer goods, marine, manufacturing, machining, materials and metals, rail, and utilities.

Program concentrations include **Nuclear Engineering**, **Renewable Energy**, and **Robotics**.

The **Nuclear Engineering concentration** equips students with the expertise required for various roles in the nuclear sector, encompassing responsibilities related to nuclear design and processing. Graduates are prepared for careers in areas such as nuclear engineering, reactor safety, power plant design, and related fields. Whether engaged in designing nuclear systems or contributing to nuclear processing, graduates emerge with a robust skill set and a profound understanding of the intersection between mechanical engineering and the dynamic field of nuclear technology.

The **Renewable Energy concentration** prepares students for careers in areas such as energy policy, supervision, and related fields. Whether involved in the design of renewable energy systems or contributing to advancements in the field, graduates of the Renewable Energy concentration emerge with a robust skill set and a profound understanding of the intersection between mechanical engineering and the dynamic realm of renewable energy technology.

The **Robotics concentration** offers students an immersive and comprehensive understanding of the dynamic and rapidly evolving field of robotics technology. Students are prepared for opportunities in diverse career paths in industries such as automation, manufacturing, aerospace, health care, and research and development. Whether designing robotic arms for precision manufacturing or developing autonomous vehicles, graduates develop a robust skill set and a deep understanding of the intersection between mechanical engineering and the rapidly advancing world of robotics.

## Elective Requirements: 2 credits

Additional credits needed to fulfill the program requirements in any academic area.

## Program Educational Objectives

As an Excelsior University bachelor's-level mechanical engineering technology graduate, within a few years of graduation, you are expected to:

1. Apply both general and discipline-specific concepts and methodologies to proficiently identify, analyze, and resolve technical problems within the field of mechanical engineering technology, including understanding and addressing associated societal and institutional aspects;
2. Exhibit a personal commitment to remaining technologically current and adaptable to changing technologies, with a dedication to continuous learning and self-improvement;

Continued on next page

3. Demonstrate independent critical thinking, function effectively in team-based environments, and consistently maintain a high level of performance in the professional and industrial settings characteristic of the field;
4. Communicate adeptly in both written and oral forms within professional and industrial contexts, ensuring effective and clear dissemination of ideas and information;
5. Uphold a code of ethics and professionalism while operating within the realms of business, industry, and society, contributing positively to these spheres; and
6. Display and effectively apply leadership principles specific to the field of mechanical engineering technology.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Mechanical Engineering Technology program, students will be able to:

1. Apply knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to mechanical engineering technology discipline.
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly defined engineering problems appropriate to mechanical engineering technology discipline (this will include societal considerations, ethical practices, professional codes, standards, quality, continuous improvement, etc.)
3. Apply written, oral, and graphical communication in broadly defined technical and non-technical environments and identify and use appropriate technical literature.
4. Conduct standard tests, measurements, and experiments and be able to analyze and interpret the results to improve processes.
5. Function effectively as a member as well as a leader on technical teams.

## Concentration Learning Outcomes

Upon completion of the **Nuclear Engineering concentration**, students will be able to:

1. Create innovative solutions to real-world industry challenges using fundamental concepts in nuclear engineering, including nuclear materials, health physics, radiation protection, power plant components, reactor safety, and nuclear power plant design.
2. Apply theoretical knowledge to address practical challenges in the design, operation, and safety of nuclear systems.
3. Perform economic analysis to assess the economic viability and feasibility of nuclear technologies and projects.
4. Plan and execute nuclear power plant projects with consideration to power plant components and design principles.

Continued on next page

5. Create safety plans for radiation protection in nuclear environments.
6. Develop professional code of conduct attributes inclusive of societal and ethical responsibility in the planning and execution of nuclear power plant projects.

Upon completion of the **Renewable Energy concentration**, students will be able to:

1. Develop renewable energy technologies knowledge, including their principles, applications, and potential impact on the energy industry.
2. Apply theoretical knowledge to address practical challenges in the design, implementation, and utilization of renewable energy systems.
3. Evaluate the economic viability and feasibility of renewable technologies and projects.
4. Create efficient utilization of energy resources plans, with an emphasis on renewable energy solutions and sustainable practices.
5. Develop expertise in energy policy, including an understanding of regulatory frameworks, incentives, challenges, and societal considerations associated with the deployment and integration of renewable energy technologies.
6. Apply ethical considerations in the development and implementation of renewable energy technologies to underscore the importance of sustainability in engineering practices.

Upon completion of the **Robotics concentration**, students will be able to:

7. Create autonomous system designs and innovative solutions to address real-world design challenges using fundamental concepts in robotics, including kinematics, dynamics, control systems, sensor actuators, computer vision, artificial intelligence, and mechatronic integration.
8. Apply theoretical knowledge to solve practical problems related to the design, analysis, and implementation of robotic systems.
9. Evaluate the cost-effectiveness and feasibility of deploying robotic solutions in diverse industrial and technological contexts.
10. Analyze complex case studies and issues in robotics technology.
11. Develop professional code of conduct attributes inclusive of societal and ethical responsibility to design and deploy robotic technologies.

# Bachelor of Science in Nuclear Engineering Technology

## Overview

The Bachelor of Science in Nuclear Engineering Technology program focuses on preparing students for technical positions in the nuclear industry. The program is designed to advance job skills by ensuring a breadth of knowledge in nuclear engineering technology concepts. The program emphasizes the practical applications of engineering technology principles related to the nuclear industry and provides students with knowledge in reactor operations, health physics, quality assurance, chemistry, and instrumentation and control related to the nuclear engineering technology field. The general education requirements ensure students develop college-level competence in arts and sciences areas, including humanities, social sciences/history, and natural sciences/math.

The program offers the following concentrations: **General**, **Nuclear Cybersecurity**, and **Nuclear Leadership**.

The **General concentration** provides a broad foundation in nuclear engineering technology, ideal for students seeking versatile roles across the nuclear industry. This track emphasizes practical skills in blueprint reading, instrumentation and control systems, and energy fundamentals. Students also gain insight into infrastructure security and energy utilization, preparing them for technical and operational roles in nuclear facilities, utilities, and support services.

The **Nuclear Cybersecurity concentration** prepares students to protect critical nuclear infrastructure from cyber threats. This track covers computer security fundamentals, legal and compliance frameworks, and defense-in-depth strategies tailored to the nuclear industry. Students also explore business continuity planning and real-world case studies, making them valuable assets in safeguarding nuclear operations against evolving digital risks.

The **Nuclear Leadership concentration** is designed for students aspiring to management and leadership roles within the nuclear sector. It focuses on organizational behavior, strategic leadership, and effective communication in nuclear environments. Specialized courses address change management, risk assessment, and leadership courage, equipping graduates to lead teams and drive innovation in complex, regulated settings.

## Nuclear Cybersecurity

COURSE NAME	Credits
IT 380 Overview of Computer Security	3
CYS 260 Governance Legal and Compliance	3
CYS 350 Cybersecurity Defense in Depth for the Nuclear Industry This requirement must be completed at Excelsior University.	3
CYS 455 Business Continuity	3
CYS 465 Cybersecurity Investigation and Case Studies for the Nuclear Industry This requirement must be completed at Excelsior University.	3

## Nuclear Leadership

COURSE NAME	Credits
BUS 311 Organizational Behavior	3
BUS 452 Business Leadership	3
NUC 280 Leading Change in the Nuclear Industry This requirement must be completed at Excelsior University.	3
NUC 285 Leadership Communication in the Nuclear Industry This requirement must be completed at Excelsior University.	3
NUC 360 Nuclear Leadership-Risk Management/ Leadership Courage This requirement must be completed at Excelsior University.	3

A minimum grade of C is required for all Concentration requirements.

## Elective Requirements: 3 credits

Additional credits needed to fulfill the program requirements in any academic area.

## Program Educational Objectives

As an Excelsior University bachelor's-level nuclear engineering technology graduate, within a few years of graduation, students are expected to:

1. Apply general and discipline-specific concepts and methodologies to identify, analyze, and solve technical problems in the nuclear discipline, including understanding and addressing the societal and institutional issues related to nuclear technology.
2. Demonstrate an individual desire and commitment to remain technically current with, and adaptive to, changing technologies through continuous learning and self-improvement.

Continued on next page

3. Demonstrate independent thinking, function effectively in team-oriented settings, and maintain a high level of performance in a professional/industrial environment.
4. Communicate effectively in a professional/industrial environment, including communicating effectively to stakeholders external to the nuclear industry.
5. Perform ethically and professionally in business, industry, and society.
6. Demonstrate and utilize leadership principles in the field of nuclear engineering technology.

## Program (Student) Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Nuclear Engineering Technology program, students will be able to:

1. Apply knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to the nuclear engineering technology discipline.
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly defined engineering problems appropriate to the nuclear engineering technology discipline.
3. Apply written, oral, and graphical communications in broadly defined technical and non-technical environments; and be able to identify and use appropriate technical literature.
4. Conduct standard tests, measurements, and experiments, and be able to analyze and interpret the results to improve processes.
5. Function effectively as a member as well as a leader on technical teams, and apply project management techniques in team project activities.
6. Demonstrate comprehension of currently applicable rules and regulations in the areas of radiation protection, operations, maintenance, quality control, quality assurance, and safety.
7. Demonstrate an understanding of and commitment to professional, ethical, and social responsibilities, including the impacts of culture, diversity, and interpersonal relations.

## Concentration Learning Outcomes

Upon successful completion of the **Nuclear Cybersecurity** , students will be able to:

1. Assess security risk and vulnerability of existing and proposed information systems in the nuclear industry.
2. Explain incident response handling, incident coordination, and ethical and legal issues.
3. Assess the effect of cyber attacks in the nuclear industry and the impact on nuclear facilities.
4. Utilize the best sources of information available related to cybersecurity issues, threats, and recovery.

Upon successful completion of the **Nuclear Leadership concentration**, students will be able to:

1. Apply strategies in effective leadership, diverse work environments, and resolving conflicts.

Continued on next page

2. Demonstrate an understanding of ethical and unethical leadership behaviors in regard to the nuclear industry.
3. Explain the roles of leaders in leading change, risk management, and communicating effectively in the nuclear industry.
4. Summarize leadership challenges in the nuclear industry, including risk management perspectives.
5. Integrate leadership theories to improve an organization's behaviors and organizational standards in support of management priorities.

## Degree-Specific Policies

Policies and procedures that apply specifically to the Bachelor of Science in Nuclear Engineering Technology follow.

### **Credits from Training Programs Completed at United States Nuclear Power Plants That Are Accredited by the Nuclear Industry Accredited Training Programs (NUAP)**

The Excelsior University Nuclear Engineering Technology Faculty evaluated several of the standardized training programs at nuclear power facilities that are accredited by NUAP. The 10 utility training programs that have been evaluated for college credit are:

- ▶ Shift Technical Advisor
- ▶ Senior Reactor Operator
- ▶ Reactor Operator
- ▶ Non-licensed Operator
- ▶ Engineering Support Personnel
- ▶ Radiation Protection Technician
- ▶ Chemistry Technician
- ▶ Electrical Maintenance Technician
- ▶ Instrumentation and Controls Technician
- ▶ Mechanical Maintenance Technician

### **Credits from Training Programs Completed at the United States Navy Nuclear Power School and Prototype**

The Excelsior University Nuclear Engineering Technology Faculty evaluated several of the standardized training programs at the United States Navy Nuclear Power School and Prototype, and Excelsior University recognizes the credit recommendations of the ACE College Credit Recommendation Service.

# Master of Science in Cybersecurity

## Overview

The Master of Science in Cybersecurity is designed to enable students to pursue their career goals within the critically important cybersecurity field. This program provides professionals with the techniques and knowledge to protect the organization's cyber assets by focusing on prevention, detection, countering, and recovery from cyber incidents. The curriculum focuses on aspects of cybersecurity, including strategies, policy, ethics and legal compliance, operational process, and technology to secure and defend an organization's cyber assets. This program is suited for professionals who aim to pursue senior-level technical or managerial positions in cybersecurity such as information security officer, cybersecurity manager, senior security analyst, security and compliance manager, director IT security and governance, digital crime investigator, or penetration tester.

The **General concentration** provides students with a comprehensive understanding of key areas essential for modern cybersecurity professionals. This concentration emphasizes security policy and compliance, global cyber capabilities, and cloud security measures. Students will gain hands-on experience and practical knowledge through laboratory assignments, preparing them for industry certifications such as ISC2 Certified Cloud Security Professional (CCSP). By completing this concentration, students will be well-equipped to protect organizational assets, respond to cyber threats, and implement robust security policies and technologies in various environments.

The **Information Assurance concentration** is designed as a specialization for individuals who wish to be hands-on while combating cybersecurity threats. The focus is on software control management tools, software integration, cyber defense mitigation, and digital forensics. The three classes within this concentration enable students to gain the needed knowledge of both hardware and software issues. Individuals who specialize in cyber operations will be prepared to be on the front line of defense for companies.

CYS 560 Information Assurance	3
CYS 596 Capstone Project in Cybersecurity This requirement must be completed at Excelsior University.	3

A minimum grade of B or higher is required for all Major Core and Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Concentration Requirements: 9 credits

One of the following must be declared.

### General

COURSE NAME	Credits
CYS 545 Security Policy and Compliance	3
CYS 577 Global Cybersecurity	3
CYS 610 Cloud Technologies and Data Security	3

### Information Assurance

COURSE NAME	Credits
CYS 523 Software and Application Security	3
CYS 526 Cyber Attacks and Defense	3
CYS 586 Digital Forensics and Investigation	3

A minimum grade of B or higher is required for all Major Core and Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources, and the Grade Scale, GPA, and Credit Application policies.

Continued on next page

## Program Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Cybersecurity program, students will be able to:

1. Continuously monitor, maintain, and enhance the protection of enterprise-wide information assets through effective industry accepted information management and risk management techniques.
2. Detect, analyze, and respond to cyberattacks on networks and computer systems.
3. Conduct risk and vulnerability assessments of existing and proposed information systems.
4. Utilize the best sources of information available related to cybersecurity issues, threats, and recovery.
5. Apply interdisciplinary leadership practices based on evidence that promote ethical and collaborative sustainable change in cybersecurity.
6. Demonstrate proficiency in communicating technical information in formal reports, documentation, and oral presentations to users and information technology professionals.
7. Demonstrate a commitment to professional development and to continue to engage in lifelong learning.
8. Evaluate interdisciplinary approaches to problem solving and opportunities to lead a diverse/global workforce.

## Concentration Learning Outcomes

Upon completion of the **General concentration**, students will be able to:

1. Analyze, critique, and write security policies with a strong focus on legal, ethical, privacy, and governance issues.
2. Understand the global cybersecurity capabilities and trends, evaluating cyber-related strategies and policies of nation-states and non-state actors.
3. Implement and manage cloud security measures, ensuring the protection of cloud-based systems, data, and infrastructure.

Upon completion of the **Information Assurance concentration**, students will be able to:

1. Develop a security coding environment to maintain and protect source code for securing applications.
2. Recommend software appropriate for defending against cyberattacks.
3. Demonstrate knowledge of digital forensics and how it can be used to assist with an investigation.

# Graduate Certificate in Cybersecurity Operations

9  
CREDITS

## Certificate Description

The Graduate Certificate in Cyber Operations is designed as a specialization for an individual who wishes to be hands-on while combating cybersecurity threats and conducting risk analysis. The focus is on threat detection and incident response, information assurance, as well as cyber defense mitigation. The three classes within this concentration will allow students to gain the needed knowledge to utilize devices, computer programs, and techniques that are designed to maintain a secure environment that will affect all aspects of cyberspace. Individuals who specialize in cyber operations will be prepared to be on the front line of defense for companies.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ CYS 560 Information Assurance (3 credits)
- ▶ CYS 575 IT Risk Analysis and Management (3 credits)
- ▶ CYS 526 Cyber Attacks and Defense (3 credits)

## Certificate Learning Outcomes

Upon completion of the Excelsior University Graduate Certificate in Cybersecurity Operations, students will be able to:

1. Apply risk analysis methodologies to identify potential vulnerabilities, associated impacts, and recommend appropriate responses.
2. Apply appropriate protocols, tools, and techniques to maximize security in the network environment.
3. Construct cybersecurity strategies that use information technology to measurably improve cybersecurity performance.

## Policies Specific to the Graduate Certificate in Cybersecurity Operations

Policies and procedures that apply specifically to the Graduate Certificate in Cybersecurity Operations are listed in the following section:

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Cybersecurity Operations have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

## College of Nursing and Health Sciences

## Message from the Executive Dean

Dr. Robin Goodrich

Dear Student,

On behalf of the faculty and staff in the College of Nursing and Health Sciences, congratulations on embarking on this exciting journey to further your education and pursue your calling in health care. We are excited to support your dreams and guide you toward reaching your desired career goals.

As an Excelsior University student, you join thousands of others who since 1971 have chosen Excelsior's student-centered and engaging learning experiences. Our programs prepare and empower students to provide care, advocate for health outcomes, and lead change. Every day, our graduates make an impact on our healthcare system across the United States and positively affect the people in their communities and their communities as a whole.

The education you receive at Excelsior University will prepare you to practice in nursing and health sciences. Excelsior University is accredited by the Middle States Commission on Higher Education, and our nursing programs have specialty accreditation. The RN to BS in Nursing, RN to MS in Nursing dual degree programs, and master's nursing programs at Excelsior University are accredited by the Accreditation Commission for Education in Nursing (ACEN). Excelsior University's associate-level nursing program is programatically accredited by the New York State (NYS) Board of Regents, State Education Department Office of the Professions (the Regents).

This catalog provides detailed information about our nursing and health sciences programs. Please take the time to read it carefully, particularly paying attention to the student policy references, and be sure to review the [student policy section on the website](#). I encourage you to use the learning resources that are available to help you satisfy the program requirements, and to always stay in communication with the faculty and staff.

Again, congratulations and much success!

Sincerely,

*Robin Goodrich*

Robin S. Goodrich, EdD, RN  
Purnell Executive Dean, College of Nursing and Health Sciences

## College of Nursing and Health Sciences

### *Mission Statement*

---

The College of Nursing and Health Sciences prepares and empowers students to provide outstanding care, advocate for healthy populations, and lead positive change. Student-centered and engaging learning experiences make it possible for students to elevate their personal and professional lives while benefiting their communities.

### *Vision Statement*

---

The College of Nursing and Health Sciences seeks to educate and empower leaders and lifelong learners who will be global change agents and local community advocates in healthcare, practicing with the highest level of compassion and excellence.

**College of Nursing and Health Sciences**  
**SCHOOL OF ALLIED HEALTH**  
*Degree and Certificate Programs*

## College of Nursing and Health Sciences

### SCHOOL OF ALLIED HEALTH

#### *Mission Statement*

---

The School of Allied Health prepares and empowers students to critically engage in innovation and transformation of healthcare systems to develop stronger ecosystems that improve care across patient populations through research and technological foundations.

#### *Vision Statement*

---

The School of Allied Health trains emerging cross-sectional leaders in community health to contribute to eliminating inequities in healthcare, expanding access, and promoting culturally competent care among global citizens.

# Associate in Science in Health Sciences

## Overview

The Associate in Science in Health Sciences is a 60-credit program that integrates content in arts and sciences with a focus on the health sciences. The program is designed as an academic gateway for individuals pursuing a career in the health sciences or for those already working in the field who want to build on their existing knowledge and skills to advance their career.

The AS in Health Sciences program lays the foundation for continued education at the baccalaureate level. Through coursework in the arts and sciences and health science components of the curriculum, students engage in learning that fosters information literacy, critical thinking, and effective communication and builds a strong foundation for lifelong learning and career success. Graduates of the program may continue personal and professional growth with the Excelsior University Bachelor of Science in Health Sciences program.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 60**

**Arts and Sciences Requirements: 30 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements \(revised\) on page 32](#) for more information.

**University Requirements: 1 credit**

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1

Continued on next page

## General Education Requirements: 18 credits

COURSE NAME	Credits
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3
<b>ENG 101A Advanced Composition</b>	3
<b>IND 203 Introduction to Professional Ethics</b> This topic is required to meet the specified requirement.	3
<b>PSY 235 Lifespan Developmental Psychology</b> This topic is required to meet the specified requirement.	3
<b>BIO 110 Biology (Non-Lab)</b>	3
<b>MAT 101 Mathematics for Everyday Life</b>	3

A minimum grade of C or higher is required for all General Education requirements. The above are the preferred courses; however, course topics with a footnote are required for this degree program.

## Major Core Requirements: 12 credits

COURSE NAME	Credits
<b>HSC 112 Medical Terminology</b>	3
<b>HSC 121 Health Care in the United States</b>	3
<b>HSC 124 Professionalism in Health Care</b>	3
<b>HSC 292 Associate in Health Sciences Capstone</b> This requirement must be completed at Excelsior University.	3

A minimum grade of C or higher is required for all Major Core requirements.

Continued on next page

## Health Sciences Electives: 14 credits

College-level coursework from the following subject areas meet the health sciences electives: cardiovascular technology, dental hygiene, medical laboratory technology, nursing, pharmacy technology, radiology, arts and sciences subjects supportive of the health sciences, and Excelsior-evaluated health care credentials as outlined on the [Start with More Credit page](#). The following Excelsior courses are recommended to meet the Health Sciences Electives.

COURSE NAME	Credits
BIO 115 Anatomy and Physiology I (Non Lab)	3
BIO 115L Anatomy and Physiology I Lab	1
BIO 116 Anatomy and Physiology II (Non Lab)	3
BIO 116L Anatomy and Physiology II Lab	1
BIO 212 Microbiology	3
PSY 101 Introduction to Psychology I	3

A minimum grade of C or higher is required for all Health Sciences Electives requirements.

## Arts and Sciences Electives: 9 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

A minimum grade of C is required for all Arts and Sciences Electives requirements.

## Elective Requirements: 6 credits

Additional credits needed to fulfill the program requirements in any academic area.

A minimum grade of C is required for all Elective requirements.

## Program Learning Outcomes

Upon successful completion of the Associate in Science in Health Sciences program, students will be able to:

1. Demonstrate effective oral and written communication.
2. Demonstrate critical thinking skills for guiding decision-making in various health care scenarios.
3. Describe the structure and function of the health care delivery system in the United States.
4. Explain the various roles and responsibilities of health professionals.
5. Critique current trends and opportunities that improve the provision of health care.

# Bachelor of Science in Health Care Management

## Overview

The Bachelor of Science in Health Care Management is a 120-credit program designed to meet the needs of adult learners interested in a career facilitating health care operations and activities. This program comprises coursework that prepares individuals to perform responsibilities required for the administration of health care. The curriculum includes core courses in business, health care management, and other areas supportive of the health care manager role.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**Upper-Level Requirements: 30 credits**

The minimum number of credits needed at the upper level for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**University Requirements: 4 credits**

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3

## General Education Requirements: 33 credits

COURSE NAME	Credits
ENG 101A Advanced Composition	3
ENG 102A Advanced Composition II	3
IND 203 Introduction to Professional Ethics This topic is required to meet the specified requirement.	3
COMM 125 Public Speaking	3
COMM 210 Interpersonal Communication	3
PSY 101 Introduction to Psychology I	3
SOC 101 Introduction to Sociology This topic is required to meet the specified requirement.	3
PSY 235 Lifespan Developmental Psychology	3
MAT 101 Mathematics for Everyday Life This topic is required to meet the specified requirement.	3
MAT 201 Statistics This topic is required to meet the specified requirement.	3
BIO 110 Biology (Non-Lab)	3

A minimum grade of C or higher is required for all General Education requirements. The above are the preferred courses; however, course topics with a footnote are required for this degree program

## Major Core Requirements: 45 credits

COURSE NAME	Credits
HSC 112 Medical Terminology	3
ECO 260 Introduction to Microeconomics	3
ECO 262 Introduction to Macroeconomics	3
HSC 302 Principles of Health Care Management	3
HSC 310 Writing and Communication in the Health Science Professions	3
HSC 312 Ethics of Health Care	3
PSY 305 Research Methods	3
HSC 414 Budget and Finance in Health Care Organizations	3

Continued on next page

**Major Core Requirements: 45 credits**

(continued from previous page)

COURSE NAME	Credits
BUS 311 Organizational Behavior	3
BUS 312 Managing Human Resources	3
BUS 351 Marketing Concepts and Application	3
BUS 380 Managing Diversity in the Workplace	3
HSC 432 Introduction to the Health Care Delivery System	3
HSC 450 Economics of Health Care	3
HSC 470 Healthcare Management Capstone This requirement must be completed at Excelsior University.	3

A minimum grade of C is required for all Major Core requirements.

**Health Care Electives: 26 credits**

College-level course work from the following subject areas meet the health care electives: business, cardiovascular technology, dental hygiene, medical laboratory technology, nursing, pharmacy technology, radiology, arts and sciences subjects supportive of the health sciences, and Excelsior-evaluated health care credentials as outlined on the [Start with More Credit](#) page. The following Excelsior courses are recommended to meet the Health Care Electives.

COURSE NAME	Credits
BIO 115 Anatomy and Physiology I (Non Lab)	3
BIO 115L Anatomy and Physiology I Lab	1
BIO 116 Anatomy and Physiology II (Non Lab)	3
BIO 116L Anatomy and Physiology II Lab	1
HSC 121 Health Care in the United States	3
HSC 124 Professionalism in Health Care	3
BIO 212 Microbiology	3
HSC 330 Legal and Regulatory Environment of Health Care	3
PSY 420 Human Motivation	3
HSC 445 Introduction to Health Care Informatics	3

A minimum grade of C is required for all Health Care Electives requirements.

## Arts and Sciences Electives: 12 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

### Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Health Care Management, students will be able to:

1. Implement management practices in healthcare settings that reflect leadership and organizational theories.
2. Apply resource management principles within diverse health care organizations.
3. Explain the role of the manager in maintaining a legal and ethical environment.
4. Determine effective communication strategies when interacting with stakeholders.
5. Use evidence-based practice to guide decision making and promote quality in health care settings.

# Bachelor of Science in Health Sciences

## Overview

The Bachelor of Science in Health Sciences offers a flexible, contemporary pathway for students seeking to advance in allied health and health science fields. Combining foundational arts and sciences with specialized coursework, the program prepares graduates for diverse roles in health care operations, planning, and policy, while providing a strong foundation for advanced study.

Aligned with Excelsior University's mission to provide educational opportunity to adult learners, especially those historically underrepresented in higher education, the program meets students where they are, academically and geographically. This degree is a flexible and effective way to integrate past learning with new educational goals and emerge prepared for a myriad of job opportunities. Program concentrations include **Health Science**, **Health and Wellness**, **Management**, and **Public Health**.

The **Health Science concentration** offers flexibility for students to design their own focus by exploring health sciences topics or applying prior learning toward requirements.

The **Health and Wellness concentration** prepares students for roles such as health coach, educator, fitness trainer, or wellness counselor, focusing on how nutrition, exercise, natural healing, spirituality, and lifestyle choices promote overall well-being.

The **Management concentration** enables students to develop leadership and administrative skills for health care settings, with courses in budgeting, staffing, ethics, and organizational communication.

The **Public Health concentration** focuses on disease prevention, population health, and health promotion strategies, preparing students for roles in public agencies, research, and community organizations.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements \(revised\)](#) on page 32 for more information.

PUBH 303 Public Health Policy and Leadership	3
PSY 420 Human Motivation	3
PUBH 301 Introduction to Public Health	3
PUBH 304 Introduction to Epidemiology	3
HSC 450 Economics of Health Care	3

A minimum grade of C or higher is required for all Concentration requirements.

## No Concentration (Optional)

Students may choose to complete this option by applying 15 additional credits in any academic area.

A minimum grade of C is required for all No Concentration requirements.

Continued on next page

## Arts and Sciences Electives: 15 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

A minimum grade of C or higher is required for all Arts and Sciences Electives requirements.

## Elective Requirements: 35 credits

Additional credits needed to fulfill the program requirements in any academic area.

A minimum grade of C or higher is required for all Elective requirements.

## Program Learning Outcomes

Upon completion of the Excelsior University Bachelor of Science in Health Sciences program, students will be able to:

1. Use evidence-based practice to guide decision making that promotes quality in health care settings.
2. Explain the implications of health ethics and governmental policy on the delivery of health services.
3. Recognize the need for diversity, equity, and inclusion when delivering health services.
4. Utilize current and evolving technology when planning, implementing, and evaluating health services.
5. Use effective communication strategies to engage with stakeholders and interdisciplinary teams.

# Bachelor of Science in Public Health

## Overview

Public health touches every person, either directly or indirectly. Whether food safety, disease prevention, or outbreak response, public health practice enhances quality of life and increases longevity. The Bachelor of Science in Public Health program prepares students to address both current and emerging public health challenges driven by climate change, human migration, evolving social trends, and rapid advancements in technology and artificial intelligence. The curriculum enables critical thinking in consuming, evaluating, and distributing information related to health care, public health, policy, and the administration of services and products. The curriculum cultivates leadership skills and promote collaborative teamwork. The program includes experiential learning opportunities designed to engage students in activities directly applicable to real-world public health scenarios. The program learning outcomes align with Council on Education for Public Health (CEPH) core competencies designed to meet industry and societal needs.

Program concentrations include **Health and Wellness** and **Management**.

The **Health and Wellness concentration** delves into the forefront of health promotion, empowering the student to become an adept health advocate and champion of well-being within communities. Through a comprehensive curriculum blending theory with practical application, students explore a range of topics aimed at fostering physical, mental, and social wellness.

The **Management concentration** cultivates the next generation of leaders who are equipped to navigate the complex landscape of health care management and drive positive change within organizations and communities.

## Elective Requirements: 34 credits

Additional credits needed to fulfill the program requirements in any academic area.

A minimum grade of C or higher is required for all Elective requirements.

## Program Learning Outcomes

Upon successful completion of the Excelsior University Bachelor of Science in Public Health program, students will be able to:

1. Identify and evaluate different types of evidence used in public health research and practice and apply evidence-based approaches to develop and implement public health interventions.
2. Analyze the impact of health care policies and regulations on public health outcomes and how the organizations of public health and health care systems respond at the local, national, and global levels.

Continued on next page

3. Show the ability to apply program planning and management principles to design, implement, and evaluate effective public health interventions, and develop strategies for engaging stakeholders and communities.
4. Analyze the development and implementation of public health policies at different levels and devise effective strategies for advocating for policies that promote public health and reduce health inequities.
5. Demonstrate effective leadership skills in public health practice, including strategic planning, decision-making, and team building by developing a personal leadership plan to advance their careers in public health.
6. Develop and implement communication strategies to effectively communicate public health information to diverse audiences using various media and technologies to promote public health and prevent disease.
7. Demonstrate an understanding of the roles and responsibilities of different professions in public health practice to address complex public health problems.
8. Apply systems thinking approaches to analyze complex public health problems and develop and implement interventions to address public health problems.

# Master of Science in Health Care Administration

## Overview

The Master of Science in Health Care Administration program prepares working adults to become leaders in the health care field. This degree program equips people seeking promotional opportunities and those seeking a new career in the rapidly growing health care administration field to be ethical leaders and data-driven decision makers around critical aspects of individual and community health care. Our courses provide students with knowledge and skills in quality improvement, patient safety, removing health disparities, ensuring sound financial management, leading technological innovations, human resources and talent management, and project management. Graduates work in a wide array of areas, including health care systems, hospitals, outpatient clinics, health departments, government, research and development, and consulting.

This degree program is highly experiential. Students learn through doing. Coursework includes case study analysis, projects that reinforce learning and prepare students for what is expected in their careers, and simulations that are highly relevant in today's health care settings. The program consists of a 24-credit core component, a 9-credit concentration component, a 3-credit elective, and a 3-credit capstone.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 36**

**Core Component Requirements: 24 credits**

COURSE NAME	Credits
IND 501 An Interdisciplinary Approach to Ethical Leadership This requirement must be completed at Excelsior University.	3
IND 502 Strategic Talent Management in a Complex World	3
HSC 516 Communication Strategy for the Health Care Leader	3
HSC 517 Contemporary Issues in Health Care Delivery Systems	3
HSC 525 Informatics for Health Care Leaders	3
HSC 528 Health Care Finance	3
HSC 561 Quality Management in Health Care	3

A minimum grade of C or higher is required for all Core Component requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Concentration Requirements: 9 credits

One of the following must be declared.

### Public Health

COURSE NAME	Credits
PBH 603 Behavioral Health and Social Environment	3
PBH 604 Epidemiology	3
PBH 609 Critical Issues in Public Health	3
PBH 613 Program Planning and Evaluation for Public Health	3
PBH 647 Vulnerable Populations	3

### General Track

Any 9 graduate-level credits supportive of Health Care Administration. Students are required to complete a compilation of graduate-level coursework from health sciences fields. This will include Excelsior University graduate courses as well as approved courses transferred in from other institutions.

A minimum grade of C or higher is required for all Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

### Graduate Health Sciences Capstone: 3 credits

COURSE NAME	Credits
HSC 698 MS in Health Care Administration Capstone This requirement must be completed at Excelsior University.	3

A minimum grade of C or higher is required for the Capstone requirement. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

Continued on next page

## Policies Specific to the Master of Science in Health Care Administration

### Acceptance of Transfer and Evaluated Credit

Students may transfer up to 18 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources and the Grade Scale, GPA, and Credit Application policies.

### Program Learning Outcomes

Upon completion of the Excelsior University Master of Science in Health Care Administration program, students will be able to:

1. Execute effective communication strategies within the health care environment and with external stakeholders.
2. Apply interdisciplinary leadership practices based on evidence that promotes ethical, and collaborative sustainable change in the health care sector.
3. Apply principles of risk management and quality improvement to achieve desired outcomes.
4. Implement financial management strategies commonly used by health care leaders.
5. Analyze contemporary issues impacting the health care environment.
6. Evaluate interdisciplinary approaches to problem solving and opportunities to lead a diverse workforce.

# Master of Science in Health Sciences

## Overview

The Master of Science in Health Sciences program prepares students to become leaders in the health care and public health fields, equipping them to be ethical leaders and data-driven decision makers around critical aspects of individual and population health care. Courses provide students with knowledge and skills to communicate with an array of stakeholder groups, particularly around ethical leadership, data-driven decision making, and actively working to promote diversity, equity, and inclusion across the health and public health systems. Students acquire foundational knowledge in research, health care policy, advocacy, and applying the social determinants of health in their professional lives. This degree program is highly experiential. Students learn through doing. Coursework includes case study analysis, projects that reinforce learning and prepare students for what is expected in their careers, and simulations that are highly relevant in today's health care settings.

Students choose from 11 concentrations: **Cannabis Control, Data Analytics, Distributed Workforce Management, General Health Science, Health Care Management, Human Resource Management, Leadership, Marketing, Nutrition, Public Health, and Strategic Sustainability.**

The **Cannabis Control concentration** prepares students with the skills and the knowledge base to understand the impacts of legalization of cannabis in our communities, states, and nation. The curriculum incorporates best-practice instructional techniques—including realistic case studies—to foster strong critical thinking skills that enable students to keep pace with the fast-changing environment. Innovative courses that meld industry and practitioner-based readings with the scientific-based research offer much-needed subject matter expertise in the field.

The **Data Analytics concentration** enhances students' analytical abilities and equips them with the skills to uncover new insights that improve strategic business decisions. Through this concentration, students learn how to collect, analyze, and visually represent rich sets of data designed to improve organizational decision making.

The **Distributed Workforce Management concentration** trains students to strategically lead decisively across all functions in organizations, including recruitment and selection, training and development, performance appraisals, health and safety, labor relations, and communications. Students create value for the organizations and communities they serve by solving the complex challenges related to managing within a distributed work environment.

The **General Health Science concentration** gives students the flexibility to design an individualized course of study by building from approved coursework or transferring in eligible college-level credits in health sciences and public health.

The **Health Care Management concentration** prepares students to lead and manage health care organizations effectively. It focuses on strategic management principles and communication strategies essential for health care leaders to navigate the complex health care environment, enhance organizational performance, and improve patient outcomes.

The **Human Resource Management concentration** provides students with 21st-century knowledge and skills required of human resource managers and executives who deal with human performance issues. Students are expected to effectively apply contemporary theories and empirical research to successfully perform key functions in human resource management, including staffing, employee relations, conflict resolution, and compensation and benefits.

The **Leadership concentration** equips students with essential skills to manage and inspire high-performing teams in dynamic business environments. This concentration emphasizes the practical aspects of leadership, such as direct team management, crisis handling, and change implementation, making it ideal for those looking to enhance their direct leadership capabilities.

The **Marketing concentration** provides students opportunities to learn and apply advanced constructs in digital marketing with a focus on brand development, launch, and management. The concentration traverses the private and public sector industries in the application of business-to-business and business-to-consumer centric marketing methods.

The **Nutrition concentration** equips students to educate individuals, families, and communities about healthful nutrition and the relationships between food and health. It also promotes access to healthy foods in marginalized communities.

The **Public Health concentration** equips students with a foundational understanding of population health, behavioral and social determinants, epidemiology, and biostatistics to prepare them for evidence-based inquiry and the development, implementation, and evaluation of public health initiatives.

The **Strategic Sustainability concentration** provides students with the knowledge and skills to lead and implement sustainable practices within organizations. It covers environmental sustainability, the science behind sustainability, and strategic leadership for sustainable development, preparing students to drive initiatives that promote environmental responsibility and strategic sustainability.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 30**

**Major Core Requirements: 21 credits**

COURSE NAME	Credits
IND 501 An Interdisciplinary Approach to Ethical Leadership This requirement must be completed at Excelsior University.	3
IND 502 Strategic Talent Management in a Complex World	3
IND 503 Data Driven Decision Making	3
HSC 510 Health Care Policy, Politics, and Power	3

Continued on next page

**Major Core Requirements: 21 credits**

(continued from previous page)

COURSE NAME	Credits
HSC 561 Quality Management in Health Care	3
HSC 525 Informatics for the Healthcare Leader	3
HSC 697 Graduate Health Sciences Capstone This requirement must be completed at Excelsior University.	3

A minimum grade of C or higher is required for all Major Core Component requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

**Concentration Requirements: 9 credits**

One of the following must be declared.

**Cannabis Control**

COURSE NAME	Credits
CBC 600 Implications of Legalization of Cannabis: Policy and Compliance	3
CBC 601 Complexities of Cannabis as Commerce	3
CBC 602 Risk Assessment in Cannabis Control	3

**Data Analytics**

COURSE NAME	Credits
BUS 540 Strategic Management of Innovative Technology	3
BUS 563 Data Analytics	3
BUS 564 Big Data and Visualization	3

**Distributed Workforce Management**

COURSE NAME	Credits
BUS 561 Virtual Training and Development	3
BUS 562 Virtual Team Management	3
IND 522 Leading High Performance Teams	3

Continued on next page

## General Health Science

College-level coursework from the following subject areas meets the General Health Science concentration requirements: health sciences and public health. The following Excelsior courses are recommended to meet the General Health Science concentration requirements.

COURSE NAME	Credits
HSC 516 Communication Strategy for the Health Care Leader	3
HSC 528 Health Care Finance	3
PBH 592 Biostatistics	3

## Health Care Management

COURSE NAME	Credits
HSC 526 Strategic Management of Innovative Technology	3
HSC 516 Communication Strategy for the Health Care Leader	3
HSC 517 Contemporary Issues in Health Care Delivery Systems	3

## Human Resource Management

COURSE NAME	Credits
BUS 504 Human Resource Management	3
BUS 514 Employment Law	3
BUS 517 Employee Staffing and Development	3

## Leadership

COURSE NAME	Credits
BUS 550 Contingency Planning	3
BUS 554 Change Management	3
IND 522 Leading High Performance Teams	3

Continued on next page

## Marketing

COURSE NAME	Credits
BUS 501 Business Communications	3
BUS 506 Marketing	3
BUS 545 Social Media Marketing	3

## Nutrition

COURSE NAME	Credits
HSC 644 Nutrition Science for Health Professionals	3
HSC 645 Nutrition Across the Life Cycle	3
HSC 646 Health Education: A Cross-Cultural Perspective	3

## Public Health

COURSE NAME	Credits
PBH 603 Behavioral Health and Social Environment	3
PBH 604 Epidemiology	3
PBH 592 Biostatistics	3

## Strategic Sustainability

COURSE NAME	Credits
SUST 601 Environmental Sustainability	3
SUST 602 Sustainability Science	3
SUST 603 Environmental Leadership and Strategic Sustainability	3

A minimum grade of C or higher is required for all Concentration requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## Policies Specific to the Master of Science in Health Sciences

### Acceptance of Transfer and Evaluated Credit

Students may transfer up to 15 credits, based on the regulations outlined in the Transfer and Evaluated Credit Sources and the Grade Scale, GPA, and Credit Application policies.

### Program Learning Outcomes

Upon completion of the Excelsior University Master of Science in Health Sciences program, students will be able to:

1. Demonstrate proficiency in using multiple strategies of communication to convey complex thoughts and ideas.
2. Use research findings to explain and direct the resolution of practice-related issues and challenges.
3. Apply interdisciplinary leadership practices based on evidence that promotes ethical, collaborative, and sustainable change in the health care sector
4. Evaluate health care policies and delivery systems to advance professional practice.
5. Analyze new and emerging trends within the health care industry.
6. Evaluate interdisciplinary approaches to problem solving and opportunities to lead a diverse workforce.

### Concentration Learning Outcomes

Upon completion of the **Cannabis Control concentration**, students will be able to:

1. Recommend strategies to ensure regulatory compliance in a rapidly evolving regulatory landscape.
2. Create workforce development and public health system responses to cannabis legalization that promote social equity.
3. Conduct risk assessment in communities where cannabis has been legalized.
4. Recommend strategies for ensuring consistent product quality and safe reliable supply chains at state, federal, and international levels.

Upon completion of the **Data Analytics concentration**, students will be able to:

1. Formulate technology innovation strategies to communicate strategic data-driven business recommendations to stakeholders.
2. Use data analytics and visualization to improve, illustrate, and monitor organizational performance, while furthering the vision.

Continued on next page

Upon completion of the **Distributed Workforce Management concentration**, students will be able to:

1. Emphasize research as vital in both academic and applied settings.
2. Collaborate on projects and case analyses with peers incorporating feedback from outside sources.
3. Focus the application of distributed workforce in a variety of organizations, including health care and nonprofits.
4. Apply managerial skills to help begin as well as advance one's career in distributed workforces.
5. Integrate diversity, equity, and inclusion into content and andragogy on distributed workforce management.
6. Change corporate policy, organizational change, and transformation because of distributed work.

Upon completion of the **Health Care Management concentration**, students will be able to:

1. Manage a diverse workforce providing health care for an increasingly heterogeneous population.
2. Analyze health care funding and delivery trends to provide recommendations for organizational action.

Upon completion of the **Human Resource Management concentration**, students will be able to:

1. Analyze the legal requirements applicable to human resource decisions.
2. Apply human resource management principles to support organizational objectives.

Upon completion of the **Leadership concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing organizational changes.
2. Apply leadership strategies to manage conflicts in the workplace.

Upon completion of the **Marketing concentration**, students will be able to:

1. Discuss key issues and challenges associated with managing digital and global marketing efforts.
2. Apply strategies to manage brand and channel development to benefit the corporations go-to-market efforts.

3. Upon completion of the **Nutrition concentration**, students will be able to:

1. Examine the interconnected influences of social determinants of health and nutrition policy on health outcomes for individuals and communities.
2. Use evidence-based decision-making to identify, implement, and evaluate solutions to barriers to healthful nutrition.
3. Evaluate nutritional needs across life stages and for individuals with various health conditions.

Continued on next page

Upon completion of the **Public Health concentration**, students will be able to:

1. Evaluate how populations are impacted by social determinants of health.
2. Use data-driven decision-making and community partnering approaches to identify, implement, and evaluate solutions to public health issues.
3. Design culturally sensitive public health strategies to improve health equity and social justice.

Upon completion of the **Strategic Sustainability concentration**, students will be able to:

1. Develop comprehensive sustainability strategies that integrate environmental, social, and economic considerations.
2. Apply scientific principles of sustainability to create innovative solutions for environmental challenges.
3. Craft initiatives that promote sustainable practices and drive organizational change toward environmental responsibility.

# Graduate Certificate in Nutrition

---

## Certificate Description

The Graduate Certificate in Nutrition is designed for people seeking to obtain nutrition and health promotion training, advance in their careers, or shift career focus from an illness to prevention focus. It includes a four-course, 12-credit requirement, with themes in health education and equity. The curriculum aligns seamlessly with current global, federal, and regional imperatives to promote health outcomes through both prevention and interventions for chronic and acute disease. The primary goals are two-fold: 1) to equip students to educate individuals, families and communities about healthful nutrition and the relationships between food and health and 2) to promote access to healthy foods in marginalized communities.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ HSC 644 Nutrition Science for Health Professionals (3 credits)
- ▶ HSC 645 Nutrition Across the Life Cycle (3 credits)
- ▶ HSC 646 Health Education: A Cross-Cultural Perspective (3 credits)

*Select One Elective:*

- ▶ HSC 510 Policy Politics and Power (3 credits)
- ▶ HSC 648 Nutrition and Chronic Disease (3 credits)
- ▶ PBH 647 Vulnerable Populations (3 credits)

## Certificate Learning Outcomes

Upon completion of the Graduate Certificate in Nutrition, students will be able to:

1. Examine the interconnected influences of social determinants of health and nutrition policy on health outcomes for individuals and communities.
2. Use evidence-based decision-making to identify, implement, and evaluate solutions to barriers to healthful nutrition.
3. Evaluate nutritional needs across life stages and for individuals with various health conditions.

## Policies Specific to the Graduate Certificate in Nutrition

Policies and procedures that apply specifically to the Graduate Certificate in Nutrition are listed in the following section. All policies can be found in their entirety within the [student policy pages](#) of the Excelsior University website.

Continued on next page

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Nutrition have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

# Graduate Certificate in Public Health Equity

---

## Certificate Description

The Graduate Certificate in Public Health Equity equips students to become transformational public health leaders and agents of change for their communities, particularly those that have historically faced significant health disparities. Essential skills in public health are taught throughout the curriculum, with opportunities to practice and develop expertise. Interdisciplinary themes are infused throughout the curriculum as a best practice for cultivating enduring change in population health outcomes. Graduates of this certificate gain in-depth knowledge and essential skills in public health. This certificate is ideal for professionals who want to explore or advance careers in public health and who want to center their careers around an equity focus.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Certificate Requirements

- ▶ PBH 603 Behavioral Health and Social Environment (3 credits)
- ▶ PBH 592 Biostatistics (3 credits)
- ▶ PBH 604 Epidemiology (3 credits)
- ▶ PBH 613 Program Planning and Evaluation for Public Health (3 credits)
- ▶ PBH 610 Environmental Health (3 credits)

## Certificate Learning Outcomes

Upon completion of the Graduate Certificate in Public Health Equity, students will be able to:

1. Evaluate how populations are impacted by social determinants of health.
2. Use data-driven decision-making and community partnering approaches to identify, implement and evaluate solutions to public health issues.
3. Design culturally sensitive public health strategies to improve health equity and social justice

## Policies Specific to the Graduate Certificate in Public Health Equity

Policies and procedures that apply specifically to the Graduate Certificate in Public Health Equity are listed in the following section. All policies can be found in their entirety within the [student policy pages](#) of the Excelsior University website.

- ▶ **Admission Eligibility:** Students must have earned a bachelor's degree for admittance into the certificate program.
- ▶ **Acceptance of Transfer Credit:** Students must complete all certificate courses at Excelsior University—no credits will be transferred in to meet the requirements.
- ▶ **Maximum Time to Complete the Certificate:** Students pursuing the Graduate Certificate in Public Health Equity have two years from the date of admission to complete all requirements.
- ▶ **Minimum GPA for Graduation:** A cumulative grade point average (GPA) of 3.0 is required to graduate.

**College of Nursing and Health Sciences**  
**SCHOOL OF NURSING**  
*Degree and Certificate Programs*

## College of Nursing and Health Sciences

### SCHOOL OF NURSING

#### *Mission Statement*

---

The School of Nursing empowers students at the associate, baccalaureate, and master's levels to achieve their professional goals by ensuring a seamless transition along the educational continuum. Through access to high-quality nursing education, the school serves a diverse and underrepresented population of adult learners, meeting the global demand for nurses. By fostering excellence, integrity, and a culture of continuous improvement, the School of Nursing contributes to the development of a skilled and compassionate nursing workforce that advances health and well-being for all.

#### *Vision Statement*

---

The School of Nursing is integral to the success and well-being of Excelsior University. Faculty and staff inspire students to become lifelong learners by fostering an environment that supports both individual and collective academic achievement. Excellence in nursing education is ensured through innovation, advocacy, and a commitment to continuous improvement. A culture of respect for diversity in program missions, curricula, students, and faculty is promoted. By preparing a compassionate and skilled nursing workforce, the goal is to lead the profession and positively impact lives for the public good.

# College of Nursing and Health Sciences Honor Societies

## Organization for Associate Degree Nursing Alpha Delta Nu Honor Society

Excelsior University has been chartered as the Zeta Chi Chapter of Alpha Delta Nu. This honor society recognizes Excelsior associate degree nursing students who demonstrate academic excellence and professionalism. Eligible students are invited to join as provisional members and gain full membership upon graduation. The induction ceremony takes place around the time of Commencement.

## Tau Kappa At-Large Chapter, Sigma Theta Tau International, Honor Society of Nursing

## Sigma Theta Tau International Honor Society of Nursing®

Tau Kappa At-Large, the Excelsior University, Empire State University, and Siena College chapter of Sigma Theta Tau International, Honor Society of Nursing, was originally chartered in July 2004. It shares the vision of Sigma Theta Tau International—to create a global community of nurses who lead using scholarship, knowledge, and technology to improve the health of the world’s people. Eligible bachelor’s and master’s degree students are invited for induction. Specific information about the chapter and its activities is available on a link from the Excelsior University website.

## Excelsior University Nursing Pin

Excelsior University has a nursing school pin available to all graduates of the nursing programs. The pin features a reproduction of the Excelsior University logo. The nursing pin is a symbol of accomplishment, knowledge, and competence in nursing.

*Students will be notified that they are eligible to purchase a pin when they complete their degree program.*

# General Information

## Goals of the School of Nursing

- ▶ Maintain national leadership in nursing and distance education and serve as an advocate for innovative and alternative educational models.
- ▶ Continuously improve the student experience; promoting improved access, satisfaction, and success.
- ▶ Maintain a healthy and diverse work environment in which faculty and staff can grow and develop intellectually and professionally.
- ▶ Expand and enhance learning support services that are responsive to students' needs and reflect best practices.
- ▶ Provide evidence-based, high-quality, rigorous, learner-centered academic programs.
- ▶ Provide flexible, dynamic, caring curricula with sound objective assessments that assure achievement of learning outcomes.

## Philosophy

The faculty of the School of Nursing is committed to an educational philosophy that emphasizes competency and learning. The faculty supports programs that are designed to meet the educational goals of a diverse population of adult learners who bring varied lifelong knowledge and experience to the learning encounter. The faculty views adult independent learning as a process of knowledge acquisition attained through exposure to varied planned educational strategies unconstrained by time and/or place.

The curricula in the School of Nursing are based on the tenets of Patricia Benner's Novice to Expert Nursing Theory. This nursing theory supports the process of nurses developing competence and expertise in patient care over time through formal education coupled with experiential learning.

We believe in the metaparadigm concepts of person, environment, health, and nursing. A person is a unique, diverse, complex holistic being with fundamental physiological, psychological, and spiritual attributes. A person is influenced by society and their cultural, moral, ethical, and spiritual persuasion. Nurses engage with patients in a dynamic partnership reflecting dignity, values, and respect. The environment consists of all persons, places, and health care policies that impact individuals, families, and communities. The environment influences access to care, health care delivery systems, health care providers, and health outcomes. The environment provides the context within which the nurse and individuals, families, and communities interact for the provision of health care.

We view health as the actualization of human potential. Health is manifested uniquely in multidimensional and dynamic patterns and processes across the life span in response to changes in the environment. Optimal health is a right of all individuals, families, and communities. Health and

Continued on next page

illness are viewed on a continuum. Health care providers collaborate with the person in decision making for maximizing human potential or achieving a peaceful death.

Nursing is a caring profession. The faculty believes nursing is a scientific discipline with a distinct body of knowledge, including principles of nursing leadership, ethical-legal practice, critical thinking, nursing process, and communication. Nursing collaborates with inter-professional health care teams to shape and improve patient outcomes. The focus of nursing is the health promotion and wellness, illness, disease, and injury prevention; and restoration of health of individuals, families, communities, populations, and systems. Nurses engage in professional role development throughout their career. This includes personal growth, learning new concepts, and developing a more sophisticated worldly view of health care. The nurse uses evidence-based practice and information technology to advance the science and practice of nursing.

## Nursing Education

The School of Nursing offers associate, baccalaureate, and master's degree programs to promote academic progression and provide adult learners with the opportunity to achieve professional goals. The faculty believes that nursing education requires a solid foundation in the arts, sciences, humanities, and technology. The curricula build across the three programs and increase in complexity to meet the demands of the current health care environment.

The faculty and students are partners in the educational process to prepare graduates for practice in a complex, dynamic environment to provide safe, quality care. The faculty believes that curricula are best designed using consensus-building by a national faculty of content experts, nurse educators, researchers, and clinicians. These curricular decisions are based on principles of adult learning, internally generated data, and evidence of best practice in nursing education. The faculty believes that knowledge related to adult learning and assessment of competence supports nursing education. The faculty believes that society's health care needs can be served by nurses with different levels of education.

## Nursing Curricula

### Organizing Framework for the Nursing Curricula

The organizing framework reflects the philosophy of the School of Nursing faculty and guides the curricula across the associate, baccalaureate, and master's programs. The faculty believes the metaparadigm concepts of nursing, person, health, and environment are interconnected with the concepts of nursing education, patient-centeredness, nursing judgment, professional identity, and spirit of inquiry. These are foundational to contemporary nursing practice and reflected in student learning outcomes for each program, which increase in complexity and promote academic progression.

Continued on next page

## Metaparadigm Concepts: Definitions

### Communication

Deliver written communication with appropriate content, organization, syntax, mechanics, and style for the audience and purpose (Excelsior University, 2023).

### Nursing Judgment

Encompasses the processes of critical thinking, problem solving, and ethical reasoning in reaching decisions through collaboration and integration of best evidence into nursing practice (NLN, 2010).

### Patient

The individual within the context of the family (NLN, 2010).

### Patient-Centeredness

An orientation to care that integrates and reflects respect for the dignity and uniqueness of individuals, their culture, values, personal preferences, and family traditions. Patient-centeredness supports respectful, efficient, safe quality nursing care to patients through all levels of care (NLN, 2010, p. 68). It advocates for patients to promote their self-fulfillment, integrity, and ongoing growth and development.

### Professional Identity

“Involves the internalization of core values (caring, diversity, ethics, excellence, holism, integrity, and patient-centeredness) and perspectives recognized as integral to the art and science of nursing. These core values become self-evident as the nurse learns, gains experience, and grows in the profession” (NLN, 2010, p. 68) and promote the ideals of the nursing profession.

## Licensure

The Associate in Applied Science in Nursing, RN to Bachelor of Science in Nursing, RN to Master of Science in Nursing Education, RN to Master of Science in Nursing Informatics, RN to Master of Science in Nursing Leadership and Administration of Health Care Systems, Master of Science in Nursing Education, Master of Science in Nursing Informatics, and Master of Science in Nursing Leadership and Administration of Health Care Systems are designed in accordance with the requirements for Registered Nurse programs in New York State. The Bachelor of Science in Nursing is designed in accordance with the requirements for Registered Nursing programs in Florida. The Associate of Applied Science in Nursing and the Bachelor of Science in Nursing program prepares students for the National Council Licensure Examination for Registered Nurses (NCLEX-RN).

Our graduates are eligible for licensure by examination or endorsement in a number of other states as well. It is important to note that Registered Nurse education and licensure eligibility rules vary from state to state. In many states, Excelsior graduates are eligible for licensure by examination or endorsement

Continued on next page

without additional requirements or stipulations. In certain states, however, Excelsior University nursing graduates either are not eligible for RN licensure or must meet additional requirements or stipulations to become eligible for RN licensure.

We communicate this information to you prior to admission based on your designated address and where applicable, whenever you inform us of a change to your designated address. Individuals who plan on relocating during or after their course of study, or who intend to practice in a state different from their current state of residence when they apply, are strongly advised to carefully review and consider state licensure rules. For additional information, visit our [State Authorization & Disclosure page](#).

Students must contact the boards of nursing in the states where you wish to practice for information about their specific licensure requirements.

Individuals convicted of felonies or certain misdemeanors or individuals with a history of substance abuse may not be eligible for licensure or eligible to take the required clinical experiences for the Excelsior University nursing degree.

The School of Nursing supports our students and graduates in their preparation for the NCLEX-RN by providing resources to assist with their success. The resources vary depending upon the student's admission date. The faculty and State Board team will assist students in accessing resources to assist with their success.

Students are encouraged to obtain a copy of the NCLEX-RN® Test Plan for the National Council Licensure Examination for Registered Nurses from the National Council of State Boards of Nursing Inc., 676 N. St. Clair St., Suite 550, Chicago, IL, 60611-2921, [www.ncsbn.org](http://www.ncsbn.org).

## Clinical Practice Requirements

All students are required to submit credentialing information prior to in-hospital clinical practice experiences. This information includes, but is not limited to, a national background check, current CPR certification, vaccination, and health records (including current physical examination, current tuberculosis screening, MMR vaccination, Varicella vaccination, Hepatitis B vaccination, current influenza vaccination, COVID-19 vaccine), and drug screening. Individual hospitals may have additional credentialing requirements. Students unable or unwilling to provide appropriate documentation may not be able to meet the learning outcomes for the course. Refer to your nursing course syllabus for detailed information regarding these requirements.

# Associate in Applied Science in Nursing

## Overview

In the Associate in Applied Science in Nursing program, LPNs, LVNs, paramedics, and certain military personnel can build their knowledge of nursing theory through educational experiences and demonstrate RN-level competency in a clinical setting. The nursing component is designed to ensure students possess competence in theory and performance in nursing comparable to that of graduates of campus-based associate degree programs. The program requires outstanding critical thinking skills and nursing judgment and commitment to academic rigor.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 65**

**Arts and Sciences Requirements: 20 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**University Requirements: 4 credits**

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3

**General Education Requirements: 21 credits**

COURSE NAME	Credits
<b>ENG 101A Advanced Composition</b>	3
<b>COMM 125 Public Speaking</b>	3
<b>IND 203 Introduction to Professional Ethics</b> This topic is required to meet the specified requirement.	3

**General Education Requirements: 21 credits**

(continued from previous page)

COURSE NAME	Credits
<b>PSY 235 Lifespan Developmental Psychology</b> This topic is required to meet the specified requirement.	3
<b>SOC 101 Introduction to Sociology</b> This topic is required to meet the specified requirement.	3
<b>BIO 212 Microbiology</b> This topic is required to meet the specified requirement.	3
<b>MAT 101 Mathematics for Everyday Life</b>	3

A minimum grade of C or higher is required for all General Education requirements. The above are the preferred courses; however, course topics with a footnote are required for this degree program.

Some state boards have specific requirements regarding the above listed areas of study (e.g., some require a laboratory component for the science courses). Please be sure to check the licensure requirements in the state of your choice when planning your degree program.

**Prerequisites to the Major Core Requirements: 6 credits**

COURSE NAME	Credits
<b>BIO 115 Anatomy and Physiology I (Non Lab)</b> This topic is required to meet the specified requirement.	3
<b>BIO 116 Anatomy and Physiology II (Non Lab)</b> This topic is required to meet the specified requirement.	3

A minimum grade of C or higher is required for all Prerequisites to the Major Core requirements. The above are the preferred courses; however, course topics with a footnote are required for this degree program.

**Major Core Requirements: 34 credits**

These requirements must be completed at Excelsior University.

**PHASE I**

COURSE NAME	Credits
<b>NUR 104 Essentials of Nursing Care: Health Safety</b>	3
<b>NUR 105 Essentials of Nursing Care: Health Differences</b>	3
<b>NUR 101 Introduction to Professional Nursing</b>	2

Continued on next page

**Major Core Requirements: 34 credits**

(continued from previous page)

These requirements must be completed at Excelsior University.

NUR 109 Foundations in Nursing Practice	3
<b>PHASE II</b>	
COURSE NAME	Credits
NUR 209 Reproductive Health	3
NUR 211 Health Differences Across the Life Span 1	3
NUR 212 Health Differences Across the Life Span 2	3
NUR 213 Health Differences Across the Life Span 3	3
<b>PHASE III</b>	
COURSE NAME	Credits
NUR 250 Clinical Nursing Practicum: Care of Patients Across the Lifespan Requires submission of new Verification of Health Care Experience (VHCE) form no more than three months prior to receiving approval to register for this course.	4
NUR 275 Competencies for Contemporary Nursing Practice	3
NUR 290 Nursing Capstone: Advanced Clinical Practicum	4

A minimum grade of C or higher is required for all Major Core requirements. Students must receive approval from an academic advisor before registering for Major Core requirements.

## End-of-Program Student Learning Outcomes

Upon successful completion of the Excelsior University Associate in Applied Science in Nursing degree program, students will be able to:

1. Use a caring holistic approach to provide and advocate for safe quality care for patients and families in an environment that values the uniqueness, dignity, and diversity of patients.
2. Apply the nursing process to make nursing judgments, substantiated with evidence to provide safe, quality patient care across the lifespan.
3. Use principles of management and delegation to implement plans of care with members of the intra-professional team to achieve safe, quality, patient outcomes.
4. Demonstrate the standards of professional nursing practice and core values within an ethical and legal framework.

Continued on next page

5. Apply principles of leadership and interprofessional collaboration to improve patient outcomes.
6. Use evidence-based findings and information technology to improve the quality of care for patients.
7. Apply effective written communication methods applicable to the nursing profession.

The end-of-program student learning outcomes are guided by the competencies developed by the National League for Nursing (2021) and the Quality and Safety Education for Nursing Institute, QSEN (2014).

National League for Nursing (2010). Outcomes and competencies for graduates of practical/vocational, diploma, associates, baccalaureate, master's, practice doctorate, and research doctorate program in nursing. New York, NY. Author.

QSEN Institute. (2014) Competencies: Pre-licensure KSAS. Retrieved from <http://www.qsen.org/competencies/>.

## Policies Specific to the Associate in Applied Science in Nursing Degree

The Excelsior University [student policy pages](#) are your resource for understanding the academic and administrative policies that are important to your academic success. They include a wide range of information from important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues. It is your responsibility to be familiar with these policies.

### Licensure Requirement

Students are required to maintain an active and unencumbered LPN or paramedic license while in the Associate in Applied Science in Nursing degree program. Students whose license becomes inactive or encumbered during the program will not be permitted to register for a nursing course until the license is reactivated and unencumbered.

### Repeating Online Courses

Students are required to earn a passing grade on a failed nursing course before being permitted to register for other nursing courses. Refer to the [Repeating Sources of Credit](#) policy for more information.

Continued on next page

## Nursing Online Courses

**Online courses** have a defined start and end date within an eight-week term during which students are required to complete weekly assignments and interact with other students and the faculty. They are similar to campus-based courses in this regard. However, since they are offered primarily in an asynchronous format, students have some flexibility as to when they log in and participate in learning activities.

Online courses require weekly online discussions, writing assignments, and quizzes. Embedded simulated practice experiences using virtual patients are threaded throughout all phases of the associate degree nursing curriculum. Students should plan to spend 18 hours or more per week to complete coursework.

**Nursing Hybrid Courses** combine all online course features described above with additional synchronous laboratory and in-person clinical experiences within an eight-week term.

Students must receive approval from an academic advisor before registering.

Please note that it takes six (6) business days from the end of a course term until course grades are official and available. Students who choose to take online courses for their requirements must pay close attention to the Excelsior University academic calendar, and must work closely with their academic advisors regarding the timing of course terms and when approval can be granted.

## Laboratory Experiences

A variety of asynchronous and synchronous lab experiences occur in the program. The synchronous lab experiences last 1-2 hours. Students are scheduled and required to be present for the laboratories during daytime, weekday hours. Students must have a desktop or laptop computer with a webcam and audio capability for the laboratory experiences.

## Clinical Experiences

Students must complete these requirements through Excelsior University.

Clinical courses require students to travel to clinical sites for multi-day experiences in NUR 250 and NUR 290. Students are responsible for travel and associated expenses to the clinical site. Students must comply with clinical facility requirements for a health status report, immunizations, criminal background checks, and certification in Basic Life support. These are subject to change based on facility annual requirements. Students who are unable to comply with these requirements cannot be guaranteed registration into clinical courses. Clinical experiences cannot be waived.

## Technical Standards for the Clinical Experiences

Technical standards are the required and essential abilities that an individual taking clinical courses must effectively demonstrate as an Excelsior University Associate in Applied Science in Nursing degree student.

Continued on next page

Clinical experiences assess student's application of competency of nursing practice, the nursing process, and technical components for nursing practice in the care of adults and children in the acute care setting. Therefore, the nursing student must be able to perform the following:

- ▶ Assess, perceive, and understand the condition of assigned patients.
- ▶ See, hear, smell, touch, and detect subtle changes in colors.
- ▶ Communicate (verbally and in writing) with English-speaking patients and/or family members/significant others as well as members of the health care team, including nurses, physicians, support staff, and faculty.
- ▶ Read and understand documents written in English.
- ▶ Perform diagnostic and therapeutic functions necessary for the provision of general care and emergency treatment to the patient.
- ▶ Stand, sit, move, and tolerate the physical exertion necessary to meet the demands of providing safe clinical care.
- ▶ Solve problems involving measurement, calculation, reasoning, analysis, and synthesis.
- ▶ Perform nursing skills in the face of stressful conditions and exposure to infectious agents and blood-borne pathogens.

## Planning for Degree Completion

Students should plan carefully, consulting with their academic advisors, about the courses to take to fulfill degree requirements. We recommend that students obtain prior approval from an academic advisor before registering for a course from Excelsior University. If seeking approval for a course offered by another accredited institution, students must provide the course title, course number, and the name of the institution to the academic advisor; in some cases, it may be necessary for the student to submit a course syllabus as well, so the advisor can determine whether the course is applicable. In choosing courses to meet the non-major core requirements, students should consider selections that will help to meet future educational or professional goals.

## Learning Resources and Assistance for Nursing Students

The primary learning resource for each requirement is a course syllabus and required course materials. Students are expected to purchase or have access to the required course materials and skills kit for nursing requirements.

Other learning resources and assistance include:

- ▶ Excelsior University online library—no fee
- ▶ Access to academic advisors via phone and Excelsior University Message Center to assist with program planning—no fee

# Bachelor of Science Programs in Nursing

## Beliefs About the Practice of Bachelor's Degree Nursing

Nurses prepared at the bachelor's level use a distinct body of knowledge as well as intellectual and practice skills to provide culturally appropriate care to clients across the life span and at various points on the health-illness continuum. They are educated to deliver client-centered care as a member of an interprofessional team emphasizing evidence-based practice, quality improvement approaches, and prevention. Nursing practice is built on nursing knowledge, theory, and research, and the nurse applies and adapts knowledge from other fields and professions as appropriate.

The mission of the Baccalaureate Nursing Program at Excelsior University is to meet students where they are in their lives and careers and use innovative distance-learning education to empower them to lead health care teams of the future. Graduates will be prepared to deliver population-based health care to a complex, diverse society at local, national, and global levels.

The program framework is based on the American Association of Colleges of Nursing Essentials: Core Competencies for Professional Nursing Education (AACN, 2021). This publication identifies curricular elements and expected outcomes and provides the educational framework for the preparation of professional nurses. Achievement of these outcomes enables graduates to practice in an ever-changing and complex health care environment. Concepts such as patient-centered care, nursing judgment, cultural sensitivity, professionalism, and spirit of inquiry are emphasized in the curriculum. A solid base of liberal education helps students develop an expanded world view that supports critical problem solving in addressing complex health care challenges.

# Bachelor of Science in Nursing

## Overview

Excelsior University's Bachelor of Science in Nursing prelicensure program prepares students to become skilled, compassionate registered nurses through a combination of coursework, in-person immersive clinical education, and hands-on experience in our modern skill and simulation labs. Students apply their learning during supervised clinical experiences in hospitals and community health care settings, ensuring a seamless transition from classroom to practice. Upon successful completion of this program and passing the NCLEX-RN examination, graduates will possess the knowledge, skills, and clinical experience necessary to enter the workforce as competent, practice-ready registered nurses.

The curriculum provides comprehensive preparation across key areas of nursing, including medical-surgical, pediatrics, maternal-newborn, mental health, community health, and leadership. Guided by experienced faculty and supported by robust academic success resources, graduates are well prepared to deliver safe, evidence-based, patient-centered care while excelling as collaborative members of today's health care teams.

**PROGRAM MODALITY: HYBRID**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**Upper-Level Requirements: 30 credits**

The minimum number of credits needed at the upper level for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

## University Requirements: 4 credits

NUR 455C Community and Public Health Nursing (Clinical)	1
NUR 465 Pre-licensure Baccalaureate Nursing Capstone	4
NUR 465C Pre-licensure Baccalaureate Nursing Capstone (Clinical)	1

A minimum grade of C or higher is required for all Major Core requirements.

## Arts and Sciences Electives: 6 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

Continued on next page

## End-of-Program Student Learning Outcomes

Upon successful completion of the prelicensure Bachelor of Science in Nursing program, students will be able to:

1. Integrate patient-centered culturally responsive care with a population health approach to reduce health disparities and promote wellness across the life span.
2. Apply nursing knowledge, evidence-based practice, and health informatics to support clinical reasoning and decision-making to improve health outcomes.
3. Collaborate with patients, families, health care teams, and community partners using effective communication to advance quality care and address health equity.
4. Implement leadership principles in systems-based nursing practice to ensure safe, timely, and effective health outcomes.
5. Evaluate ethical principles and reflective practices that foster ongoing professional development in nursing.

## Policies Specific to the Bachelor of Science in Nursing Prelicensure Degree

The Excelsior University [student policy pages](#) are your resource for understanding the academic and administrative policies that are important to your academic success. They include a wide range of information, from important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues. It is your responsibility to be familiar with these policies.

### Repeating Courses

Students should consult their academic advisor before registering for Major Core courses to ensure they meet any grade or content requirements. Some courses may have specific content or laboratory components that are necessary for program completion and future licensure.

For nursing courses that include separate didactic, clinical, and/or lab components (e.g., NUR 129, NUR 129C, and NUR 129L), students must achieve a passing grade in all components to successfully complete the course. Failure of any one component (didactic, clinical, or lab) constitutes a failure of the entire course, and the student will receive a failing grade for each associated section.

If a student does not earn a passing grade for any required nursing Major Core course, progression in the program will be paused until the course is successfully repeated and all prerequisite requirements for subsequent nursing Major Core courses are met. Refer to the [Repeating Sources of Credit policy](#) for more information.

### Nursing Online Courses

Online courses have a defined start and end date within an eight-week term during which students are required to complete weekly assignments and interact with other students and the faculty. They are similar to campus-based courses in this regard. However, since they are offered primarily in

an asynchronous format, students have some flexibility as to when they log in and participate in learning activities.

Online courses require weekly online discussions, writing assignments, learning activities, and quizzes.

Nursing hybrid courses combine all online course features described above with additional synchronous laboratory and in-person clinical experiences within an eight-week term. Students must receive approval from an academic advisor before registering.

## **Laboratory Experiences**

A variety of asynchronous and in-person lab experiences occur in the program. Students are scheduled and required to be present for the in-person laboratories during the scheduled time. This time may vary from course to course.

## **Clinical Experiences**

Students must complete these requirements through Excelsior University.

Students are responsible for travel and associated expenses to the clinical site. Students must comply with clinical facility requirements for a health status report, immunizations, criminal background checks, drug screen, and certification in Basic Life support. These are subject to change based on annual facility requirements. Students who are unable to comply with these requirements cannot be guaranteed registration into clinical courses. Clinical experiences cannot be waived.

## **Technical Standards for the Clinical Experiences**

Technical standards are the required and essential abilities that an individual taking clinical courses must effectively demonstrate as an Excelsior University Bachelor of Science in Nursing student.

Clinical experiences assess the student's application of competency of nursing practice, the nursing process, and technical components for nursing practice in the care of adults and children in the acute care setting. Therefore, the nursing student must be able to perform the following:

- ▶ Assess, perceive, and understand the condition of assigned patients.
- ▶ See, hear, smell, touch, and detect subtle changes in colors.
- ▶ Communicate (verbally and in writing) with English-speaking patients and/or family members/significant others as well as members of the health care team, including nurses, physicians, support staff, and faculty.
- ▶ Read and understand documents written in English.
- ▶ Perform diagnostic and therapeutic functions necessary for the provision of general care and emergency treatment to the patient.
- ▶ Stand, sit, move, and tolerate the physical exertion necessary to meet the demands of providing safe clinical care.
- ▶ Solve problems involving measurement, calculation, reasoning, analysis, and synthesis.
- ▶ Perform nursing skills in the face of stressful conditions and exposure to infectious agents and blood-borne pathogens.

Continued on next page

## Learning Resources and Assistance for Nursing Students

The primary learning resource for each requirement is a course syllabus and required course materials. Students are expected to purchase or have access to the required course materials and skills kit for nursing requirements. Other learning resources and assistance include:

- ▶ Excelsior University online library—no fee.
- ▶ Access to academic advisors via phone and Excelsior University Message Center to assist with program planning—no fee.

# RN to Bachelor of Science in Nursing

## Overview

In this fully online RN to Bachelor of Science in Nursing program, students will build on their prior learning and gain knowledge that will prepare them for graduate-level education and the pursuit of lifelong learning, which is essential for practice in the nursing profession. The general education requirements ensure the student develops college-level competence in arts and sciences areas including humanities, social sciences/history, and natural sciences/math. Credits may be earned through courses, or transferred from accredited, degree-granting institutions or approved examination programs. The nursing component focuses on knowledge and professional competencies expected of graduates of bachelor's programs. It emphasizes the integration of nursing and related arts and sciences knowledge in complex situations related to nursing care of individuals, families, aggregates, and communities. The nursing component requires outstanding critical thinking skills and nursing judgment as well as commitment to academic rigor.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 120**

NUR 462 Nursing Capstone	4

A minimum grade of C or higher is required for all Major Core requirements.

## Nursing Elective: 3 credits

COURSE NAME	Credits
HSC 403 Nutrition for Wellness	3

This is not required for graduates of the Associate in Applied Science in Nursing degree program from Excelsior University. A minimum grade of C or higher is required for the Nursing Elective requirements.

## Arts and Sciences Electives: 12 credits

Additional credits needed in liberal arts and sciences to fulfill the program requirements.

Continued on next page

## End-of-Program Student Learning Outcomes

Upon completion of the Excelsior University RN to Bachelor of Science in Nursing program, students will be able to:

1. Apply principles of nursing scholarship to optimize health care outcomes.
2. Integrate equitable, person-centered care standards to improve care across diverse settings.
3. Employ ethical, fiscally sound strategies in the management of population health.
4. Collaborate with stakeholders to optimize healthcare outcomes.
5. Assess strategies that create a culture of quality and safety.
6. Apply information and healthcare technologies to manage the delivery of care.
7. Apply the role of the professional nurse leader in the empowerment of others to deliver quality care.
8. Apply effective written communication methods for diverse audiences to support decision-making.

## Program Requirements

Students are required to maintain an active, unencumbered RN license. The University utilizes the Nursys e-Notify service as our database management system. Students must provide the University with the following information for submission to Nursys e-Notify:

- ▶ RN license number
- ▶ State of licensure
- ▶ Last four digits of your SSN
- ▶ Year of birth

Students whose license becomes inactive or encumbered during the program will not be permitted to register for a nursing course until the license is reactivated and unencumbered.

## Policies Specific to the RN to Bachelor of Science in Nursing

The Excelsior University [student policy pages](#) are your resource for understanding the academic and administrative policies that are important to your academic success. It includes a wide range of information from important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues. It is your responsibility to be familiar with these policies.

### Technical Standards for RN to BS Program

Technical standards are the required and essential abilities that an individual in the RN to BS program must effectively demonstrate in selected courses as an Excelsior University nursing degree student.

Continued on next page

The components of the RN to BS program test a student's application of the nursing process and technical components for nursing practice. In addition, students must possess sufficient intellectual abilities and emotional health required for safe and effective practice. Therefore, the nursing student must possess sufficient skills for the following:

- ▶ Perform a physical examination on another person, including the skills of: observation/inspection, palpation, auscultation, and percussion.
- ▶ See, hear, smell, touch, and detect subtle changes in color.
- ▶ Perform parts of a physical examination in an online simulation experience, including sufficient-hearing, and vision and manual dexterity for an online experience.

# Graduate Degree Programs in Nursing

## Beliefs About Master's Degree Practice

The faculty believes that master's-prepared nurses in the fields of nursing leadership and administration, nursing informatics, and nursing education use knowledge from nursing and other professions to influence health policy, research, and professional practice in a variety of academic and service settings. They become leaders in creating collaborative environments that advance and promote professional practice. A master's-prepared nurse will have the skills to implement safe quality care in a variety of settings and roles that influence health care outcomes for individuals, populations, or systems.

The mission of the Master's Degree in Nursing Program is to provide an accessible avenue for career advancement for professional nurses. Through degree programs in informatics, education, and leadership, the faculty strive to enhance specialty nursing practice, empowering the next generation of nurses with the competencies to transform global health.

The program framework is based on the curricular elements and expected outcomes identified by the National League for Nursing in its Outcomes and Competencies for Graduates of Practical/Vocational, Diploma, Associate Degree, Baccalaureate, Master's, Practice Doctorate, and Research Doctorate Programs in Nursing (NLN, 2010). The program builds upon and extends students' existing knowledge and competencies gained from professional experiences and prior coursework. It emphasizes, as stated in the NLN's Outcomes and Competencies document, that "Master's-prepared nurses are expected to serve as leaders, members of interprofessional teams, and scholars who advance the profession, particularly in their chosen areas of specialization" (NLN, 2010, p. 40). A foundation of core courses prepares students with a theoretical base prior to study in their specific degree program. Content and concepts such as leadership and organizational skills, quality improvement, patient safety, health policy, global perspectives, communication, advocacy, interprofessional practice, and innovative technologies expand students' knowledge base and enrich their skills.

## Purpose of the Graduate Programs in Nursing

The purpose of the master's in nursing programs is to prepare registered nurses for successful careers in a variety of academic and service settings as leaders and administrators in health care systems, nursing informatics specialists, and nurse educators. The programs educate students for advanced professional roles by creating an academic environment that fosters scholarship, critical thinking, and creativity. Using an instructional model through online courses and practice experiences and a rigorous, challenging curriculum, the programs provide a flexible means for registered nurses, including those from diverse and underserved populations, to obtain a master's degree. The programs emphasize pursuit of lifelong learning and professional development and serve as a strong foundation for doctoral study.

Distance education is as challenging as face-to-face instruction, if not more so. The nursing component/major of the degree programs requires outstanding critical thinking skills and nursing judgment, along with a commitment to academic rigor.

## Program Requirements

Students are required to maintain an active, unencumbered RN license. The University utilizes the Nursys e-Notify service as our database management system. Students must provide the University with the following information for submission to Nursys e-Notify:

- ▶ RN license number
- ▶ State of licensure
- ▶ Last four digits of your SSN
- ▶ Year of birth

Students whose license becomes inactive or encumbered during the program will not be permitted to register for a nursing course until the license is reactivated and unencumbered.

## Practice Experience

The faculty define practice experiences as opportunities for students to provide nursing care in a variety of practice learning environments that support end of program student learning outcomes and adult learning needs. Practice experiences are interactive, individualized, experiential learning experiences that provide and/or influence health care.

The faculty believe that practice experiences for master's-level nursing students provide opportunities to: act as change agents to improve health care outcomes; create, collaborate, and lead interprofessional teams; develop and test innovative solutions to clinical problems; translate evidence into nursing practice; design evidenced-based teaching learning experiences; and appreciate the need for lifelong learning. The practice experiences in the three MS nursing programs (MS in Nursing Informatics, MS in Nursing Leadership and Administration of Health Care Systems, and MS in Nursing Education) are designed to assist the student in developing expertise in their chosen specialty.

Continued on next page

During the practice experience, students work with a mentor in the MS Capstone course in each degree program (Nursing Leadership and Administration of Health Care Systems, Nursing Education, and Nursing Informatics). Additionally, students in the MS in Nursing Education program complete practice experience hours in Virtual Clinical Simulations in **NUR 506 Advanced Pharmacology** and **NUR 507 Advanced Physical Assessment**.

The course instructor provides regular feedback throughout the practice experience. Successful completion of the practice experience is required to pass the nursing courses.

The agency where students complete their Capstone practice experience may require facility-specific documentation and/or an affiliation agreement. Students must comply with all agency requirements and are responsible for any costs associated with additional documentation and/or an affiliation agreement.

## Policies Specific to the Master of Science in Nursing

The Excelsior University [student policy pages](#) are your resource for understanding the academic and administrative policies that are important to your academic success. It includes a wide range of information from important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues. It is your responsibility to be familiar with these policies.

Policies and procedures that apply specifically to the master's programs in nursing are listed on the following pages.

### Technical Standards for MS Programs

Technical standards are the required and essential abilities that an individual in the MS programs must effectively demonstrate in selected courses as an Excelsior University nursing degree student.

The components of the MS programs test a student's application of the nursing process and technical components for nursing practice. In addition, students must possess sufficient intellectual abilities and emotional health required for safe and effective practice. Therefore, the nursing student must possess sufficient skills for the following:

- ▶ Perform a physical examination on another person, including the skills of: observation/inspection, palpation, auscultation, and percussion.
- ▶ See, hear, smell, touch, and detect subtle changes in color.
- ▶ Perform parts of a physical examination in an online simulation experience, including sufficient hearing, and vision and manual dexterity for an online experience.
- ▶ Navigate in a community setting. The practice experience requires the student to travel within the community, and interact with clients and staff in a community agency. Must be able to provide own means of transportation, if needed.

Continued on next page

- ▶ Communicate (verbally and in writing) with English-speaking clients and/or family members/significant others as well as members of the health care team, including nurses, physicians, support staff, and faculty.
- ▶ Read and understand documents written in English.
- ▶ Solve problems involving measurement, calculation, reasoning, analysis, and synthesis.
- ▶ Demonstrate good judgment, use of intellectual abilities, and development of effective relationships with clients and other health care professionals.

# Master of Science in Nursing Education

## Overview

This program prepares students for nurse educator roles in both academic and service settings. Students will gain knowledge and skills in learning theories, teaching strategies, curriculum development, evaluation of learning outcomes, and using technology to support teaching. Online courses, practice experiences, and a robust curriculum prepare students for work in academic settings such as vocational, associate degree, and bachelor's degree nursing programs, and in non-academic settings that include staff development, school nursing, community and public health, nurse recruiter, and clinical settings. The dynamic and challenging curriculum provides a flexible means for registered nurses to earn a master's degree and prepare for roles as a nurse educator. This program requires outstanding critical thinking skills and nursing judgment as well as commitment to academic rigor.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

### Major Core Requirements: 38 credits

These requirements must be completed at Excelsior University.

#### PHASE I

COURSE NAME	Credits
NUR 502 Theoretical Foundations of Nursing Practice	3
NUR 503 Transformational Nursing: Innovation, Inquiry and Scholarship	3
NUR 508 Research and Evidence-Based Practice	4
NUR 533 Policy, Ethics and Population Health	4

#### PHASE II

COURSE NAME	Credits
NUR 505 Advanced Pathophysiology	3
NUR 506 Advanced Pharmacology	3
NUR 507 Advanced Physical Assessment	3
NUR 653 Designing a Learning Environment	3
NUR 661 Program and Curriculum Development in Nursing Education	3
NUR 662 Assessment and Evaluation in Nursing Education	3

## Major Core Requirements: 38 credits

These requirements must be completed at Excelsior University.

### PHASE III

COURSE NAME	Credits
NUR 676 The Nursing Education Capstone	6

A minimum grade of C or higher is required for all Major Core requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## End-of-Program Student Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Nursing Education program, students will be able to:

1. Function as a leader and change agent to promote holistic patient-centered care and population health.
2. Translate evidence to develop health care practices in a culturally and ethnically diverse global society.
3. Synthesize theoretical and empirical knowledge from nursing and other disciplines that are essential for nursing judgment and practice.
4. Integrate specialty practice knowledge to enhance inter-professional collaboration, inform decisions, and improve outcomes.
5. Exemplify professional values and standards, best practices, and the commitment to lifelong learning in the role of the master's-prepared nurse.
6. Implement the role of master's-prepared nurse as part of the inter-professional team.
7. Integrate scholarship, a spirit of inquiry, and innovation to support nursing excellence.
8. Apply effective written communication methods to resolve complex problems and organizational issues.

# Master of Science in Nursing Informatics

## Overview

If you are a registered nurse who wants to improve the health of people and communities and improve patient safety by using information technology, computer science, and nursing science, the fully online Master of Science in Nursing Informatics will equip you with the knowledge and skills you need to make an impact in this area. Online courses, practical experiences, and a robust curriculum prepare you to know how to use data and information to respond to health care problems, improve client care and organizational operations, and make and communicate information-based decisions in a variety of health organizations. The dynamic and challenging curriculum provides a flexible means for registered nurses to earn a master's degree and preparation for roles as a nurse informaticist. This program requires outstanding critical thinking skills and nursing judgment as well as commitment to academic rigor.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

### Major Core Requirements: 36 credits

These requirements must be completed at Excelsior University.

#### PHASE I

COURSE NAME	Credits
NUR 502 Theoretical Foundations of Nursing Practice	3
NUR 503 Transformational Nursing: Innovation, Inquiry and Scholarship	3
NUR 508 Research and Evidence-Based Practice	4
NUR 533 Policy, Ethics and Population Health	4

#### PHASE II

COURSE NAME	Credits
NUR 515 Management Information for Decision Support	3
NUR 521 Data, Information and Knowledge	3
PBH 604 Epidemiology	3
NUR 625 Management of Fiscal and Operational Systems	3

## Major Core Requirements: 36 credits

(continued from previous page)

These requirements must be completed at Excelsior University.

NUR 651 Systems Development in Healthcare

4

### PHASE III

COURSE NAME

Credits

NUR 686 The Nursing Informatics Capstone

6

A minimum grade of C or higher is required for all Major Core requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## End-of-Program Student Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Nursing Informatics program, students will be able to:

1. Function as a leader and change agent to promote holistic patient-centered care and population health.
2. Translate evidence to develop health care practices in a culturally and ethnically diverse global society.
3. Synthesize theoretical and empirical knowledge from nursing and other disciplines that are essential for nursing judgment and practice.
4. Integrate specialty practice knowledge to enhance interprofessional collaboration, inform decisions, and improve outcomes.
5. Exemplify professional values and standards, best practices, and the commitment to lifelong learning in the role of the master's-prepared nurse.
6. Implement the role of master's-prepared nurse as part of the interprofessional team.
7. Integrate scholarship, a spirit of inquiry, and innovation to support nursing excellence.
8. Apply effective written communication methods to resolve complex problems and organizational issues.

# Master of Science in Nursing Leadership and Administration of Health Care Systems

## Overview

The evolving health care system calls for nurse leaders who can manage clinical experiences, fiscal challenges, organizational systems, and human resources. Expert communication skills are needed to integrate these diverse and often competing elements into a strategic plan that ensures the health of the population. This fully online Master of Science in Nursing Leadership and Administration of Health Care Systems program empowers you with the skills and knowledge you need to play a vital role in health care systems, have a seat at the executive table, and have an influential voice when essential decisions are made about health care. Online courses and an individualized practice experience, in which you assume a leadership role under the guidance of an experienced mentor, prepare you for leadership roles in a variety of settings. Nurse leaders make an impact in acute health care facilities, community health centers, academic institutions, information technology organizations, and pharmaceutical industries, among other places. The dynamic and challenging curriculum provides a flexible means for registered nurses to earn a master's degree and preparation for advanced professional roles as a nurse leader. The program requires outstanding critical thinking skills and nursing judgment as well as commitment to academic rigor.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

### Major Core Requirements: 38 credits

These requirements must be completed at Excelsior University.

#### PHASE I

COURSE NAME	Credits
NUR 502 Theoretical Foundations of Nursing Practice	3
NUR 503 Transformational Nursing: Innovation, Inquiry and Scholarship	3
NUR 508 Research and Evidence-Based Practice	4
NUR 533 Policy, Ethics and Population Health	4

## Major Core Requirements: 38 credits

(continued from previous page)

These requirements must be completed at Excelsior University.

### PHASE II

COURSE NAME	Credits
NUR 515 Management Information for Decision Support	3
NUR 521 Data, Information and Knowledge	3
PBH 604 Epidemiology	3
NUR 615 Management of Clinical Systems	3
NUR 625 Management of Fiscal and Operational Systems	3
NUR 635 Leadership in Organizational Systems	3

### PHASE III

COURSE NAME	Credits
NUR 646 The Nursing Leadership and Administration Capstone	6

A minimum grade of C or higher is required for all Major Core requirements. Excelsior requires an overall 3.0 GPA for completion of graduate degrees.

## End-of-Program Student Learning Outcomes

Upon successful completion of the Excelsior University Master of Science in Nursing Leadership and Administration of Health Care Systems program, students will be able to:

1. Function as a leader and change agent to promote holistic patient-centered care and population health.
2. Translate evidence to develop health care practices in a culturally and ethnically diverse global society.
3. Synthesize theoretical and empirical knowledge from nursing and other disciplines that are essential for nursing judgment and practice.
4. Integrate specialty practice knowledge to enhance interprofessional collaboration, inform decisions, and improve outcomes.
5. Exemplify professional values and standards, best practices, and the commitment to lifelong learning in the role of the master's-prepared nurse.
6. Implement the role of master's-prepared nurse as part of the interprofessional team.
7. Integrate scholarship, a spirit of inquiry, and innovation to support nursing excellence.
8. Apply effective written communication methods to resolve complex problems and organizational issues.

# RN to Master of Science in Nursing Programs

## Program Description

The RN to Master of Science (RN to MS) nursing programs are designed to allow registered nurses to earn a Bachelor of Science in nursing, as well as a Master of Science in Nursing Leadership and Administration of Health Care Systems, Master of Science in Nursing Education or a Master of Science in Nursing Informatics. With this option, students take graduate-level courses that replace some of the undergraduate requirements. The charts on the preceding pages offer a visual representation of the requirements for the three degrees of the RN to MS in nursing programs.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Policies Specific to the RN to MS in Nursing Programs

The Excelsior University [student policy pages](#) are your resource for understanding the academic and administrative policies that are important to your academic success. It includes a wide range of information from important federal policies, including your right to privacy, to grading policies and policies and procedures concerning refunds, withdrawals, and other administrative issues. It is your responsibility to be familiar with these policies.

Additional policies and procedures that apply specifically to the RN to MS in nursing programs are listed on the following pages. All policies can be found in their entirety within the [student policy pages](#) of the Excelsior University website.

## Program Requirements

Students are required to maintain an active, unencumbered RN license. The University utilizes the Nursys e-Notify service as our database management system. Students must provide the University with the following information for submission to Nursys e-Notify:

- ▶ RN license number
- ▶ State of licensure
- ▶ Last four digits of your SSN
- ▶ Year of birth

Students whose license becomes inactive or encumbered during the program will not be permitted to register for a nursing course until the license is reactivated and unencumbered.

## Technical Standards for RN-MS Programs

Technical standards are the required and essential abilities that an individual in the RN to MS programs must effectively demonstrate in selected courses as an Excelsior University nursing degree student.

Continued on next page

The components of the RN to MS programs test a student's application of the nursing process and technical components for nursing practice. In addition, students must possess sufficient intellectual abilities and emotional health required for safe and effective practice. Therefore, the nursing student must possess sufficient skills for the following:

- ▶ Perform a physical examination on another person, including the skills of: observation/inspection, palpation, auscultation, and percussion.
- ▶ See, hear, smell, touch, and detect subtle changes in color.
- ▶ Perform parts of a physical examination in an online simulation experience, including sufficient hearing, and vision and manual dexterity for an online experience.
- ▶ Navigate in a community setting. The practice experience requires the student to travel within the community, and interact with clients and staff in a community agency. Must be able to provide own means of transportation, if needed.
- ▶ Communicate (verbally and in writing) with English-speaking clients and/or family members/significant others as well as members of the health care team, including nurses, physicians, support staff, and faculty.
- ▶ Read and understand documents written in English.
- ▶ Solve problems involving measurement, calculation, reasoning, analysis, and synthesis.
- ▶ Demonstrate good judgment, use of intellectual abilities, and development of effective relationships with clients and other health care professionals.

## Completion of the Dual Degree Programs

The RN to MS dual degree programs allow students to earn both the BS in nursing and the MS in nursing more efficiently than completing the two programs separately.

The BS in nursing degree will be conferred upon completion of all general education, bachelor's major core, prerequisites to the major core, and arts and sciences elective requirements. Students will then be able to continue seamlessly into the remaining master's major core requirements.

## Practice Experience

Each component of the dual degree requires students engage in practice experiences. The focus of these practice experiences will change as students progress through the RN-MS program. At the baccalaureate level, the focus of practice experiences shift away from individual patient care to community as client, population based health, and the role of the RN in influencing health care delivery. They differ from the "clinical" experiences of pre-licensure nursing programs. Practice experiences for master's level nursing students provide opportunities to act as change agents to improve health care outcomes; create, collaborate, and lead interprofessional teams; develop and test innovative

Continued on next page

solutions to clinical problems; translate evidence into nursing practice; design evidence based teaching learning, experiences; and appreciate the need for lifelong learning. The practice experiences in the three MS nursing programs (MS in Informatics, MS in Nursing Leadership and Administration of Health Care Systems, and MS in Nursing Education) are designed to assist the student in developing expertise in their chosen specialty. The faculty define practice experiences as opportunities for students to provide nursing care in a variety of practice learning environments that support end of program student learning outcomes, program outcomes, and adult learning needs. Practice experiences are interactive, individualized, experiential learning experiences that provide and/or influence health care.

There are various practice experience hours dispersed over four courses in the RN to BS Nursing Program portion of the program. Examples of practice experiences include: virtual clinical simulation in physical assessment, educating staff on new evidence based procedures, participating in administrative decisions about health care practices in an interprofessional team, and advocating for vulnerable populations by writing a letter to a legislator. There are practice experience hours working with a mentor in the MS Capstone course in each degree program (Nursing Leadership and Administration of Health Care Systems, Nursing Education, and Nursing Informatics). The agency where students complete their capstone practice experience may require facility specific documentation and/or an affiliation agreement. Students must comply with all agency requirements and are responsible for any costs associated with additional documentation and/or an affiliation agreement.

Additionally, students in the MS in Nursing Education program complete practice experience hours in Virtual Clinical Simulations in **NUR 506 Advanced Pharmacology** and **NUR 507 Advanced Physical Assessment**.

# RN to Master of Science in Nursing Education

## Overview

The purpose of this nursing program is to build upon prior knowledge with new learning. Using both a teaching and outcomes assessment model, this fully online dual degree program provides a flexible means for registered nurses to earn a Bachelor of Science in Nursing and a Master of Science in Nursing more efficiently than completing the programs separately.

The Nursing Education specialty focuses on the knowledge and skills required to implement the role of nurse educator in an academic or service setting. The 6-credit Capstone course includes an educational project, an online course, and a project presentation.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

## Degree Summary

**TOTAL PROGRAM HOURS: 144**

**Arts and Sciences Requirements: 60 credits**

The minimum number of credits needed in Liberal Arts and Sciences for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**Upper-Level Requirements: 30 credits**

The minimum number of credits needed at the upper level for the degree. Refer to [Graduation Requirements on page 26](#) for more information.

**University Requirements: 4 credits**

COURSE NAME	Credits
<b>INL 102 Information Literacy</b> This requirement must be completed at Excelsior University.	1
<b>IND 101 Cornerstone A: Foundations</b> This requirement must be completed at Excelsior University.	3

## General Education Requirements: 33 credits

COURSE NAME	Credits
ENG 101A Advanced Composition	3
ENG 102A Advanced Composition II	3
IND 203 Introduction to Professional Ethics This topic is required to meet the degree requirements.	3
COMM 125 Public Speaking	3
COMM 210 Interpersonal Communication	3
PSY 101 Introduction to Psychology I	3

## End-of-Program Student Learning Outcomes

Upon successful completion of the Excelsior University RN to Master of Science in Nursing Education program, students will be able to:

1. Function as a leader and change agent to promote holistic patient-centered care and population health.
2. Translate evidence to develop health care practices in a culturally and ethnically diverse global society.
3. Synthesize theoretical and empirical knowledge from nursing and other disciplines that are essential for nursing judgment and practice.
4. Integrate specialty practice knowledge to enhance interprofessional collaboration, inform decisions, and improve outcomes.
5. Exemplify professional values and standards, best practices, and the commitment to lifelong learning in the role of the master's-prepared nurse.
6. Implement the role of master's-prepared nurse as part of the interprofessional team.
7. Integrate scholarship, a spirit of inquiry, and innovation to support nursing excellence.
8. Apply effective written communication methods to resolve complex problems and organizational issues.

# RN to Master of Science in Nursing Informatics

## Overview

The purpose of this nursing program is to build upon prior knowledge with new learning. Using both a teaching and outcomes assessment model, this fully online dual degree program provides a flexible means for registered nurses to earn a Bachelor of Science in Nursing and a Master of Science in Nursing more efficiently than completing the programs separately.

The Nursing Informatics specialty focuses on the knowledge and skills required to implement the role of nurse informaticist in a variety of health care settings. The 6-credit Nursing Informatics Capstone has three components: an informatics project management experience, an online course, and a project presentation.

**PROGRAM MODALITY: ASYNCHRONOUS ONLINE**

8. Apply effective written communication methods to resolve complex problems and organizational issues.

## Undergraduate Courses

## **ACC 211 Financial Accounting**

**3 credits**

*Prerequisite: None*

In this course, students will not only begin to understand what accounting means, but they will further examine how important accounting really is. Accounting knowledge can be applied to any industry, at any level of the organization. As the business world has come under tremendous scrutiny, all business professionals are expected to have a general knowledge of accounting and are thus held much more accountable for their financial practices. Accountants are responsible for providing data that is used to determine the present and future economic stability of an organization.

This course presents an interesting opportunity for working professionals to examine the fundamentals of basic accounting concepts, assumptions, and principles. The topics chosen in this course will benefit any student who is responsible for managing budgets, reading financial statements, or making business decisions.

## **ACC 212 Managerial Accounting**

**3 credits**

*Prerequisite: ACC 211 Financial Accounting*

This course is intended to help students develop an understanding of the process of identifying, measuring, analyzing, interpreting, and communicating information in pursuit of an organization's goals. By the end of the course, students should be familiar with technical skills for solving problems such as the fundamentals of basic unit costs, cost flow management systems and processes, budgeting and performance measurement, and cost analysis and pricing decisions. As a manager, students should be able to identify relevant information, the appropriate methods for analyzing information, and working together with a team of addressing global and ethical issues. Students will be able to think on their feet and address real-world business issues.

## **ACC 314 Intermediate Accounting I**

**3 credits**

*Prerequisite: ACC 211 Financial Accounting or ACC 212 Managerial Accounting*

This course expands on topics covered in previous accounting courses to provide an in-depth study and review of accounting principles, concepts and theory. Concepts addressed in this course focus on the conceptual framework, generally accepted accounting principles, preparation of financial statements, the time value of money, cash and receivables, accounting for inventory and inventory valuation.

## **ACC 315 Intermediate Accounting II**

**3 credits**

*Prerequisite: ACC 314 Intermediate Accounting I*

This course builds on accounting topics presented in Intermediate Accounting I to prepare students for a career in the accounting field. Topics in this course will address the proper accounting procedures for property, plant and equipment, investments, liabilities and contingencies, bonds and long-term notes, and leases. Upon completion of this course, students will have a substantial knowledge base in accounting methods, according to Generally-Accepted Accounting Principles (GAAP).

### **ACC 360 Cost Accounting**

**3 credits**

*Prerequisite: ACC 212 Managerial Accounting*

A knowledge of the costs of a business can mean the difference between the long-term survival of the organization or business failure. An ability to understand and access costs is a vital prerequisite to long term growth and profitability. In this course, you will develop an understanding of cost behavior, systems, techniques, planning and control, relevant cost information for short-term decision-making and accounting data in long-term capital budgeting decisions.

### **ACC 400 Auditing**

**3 credits**

*Prerequisites: ACC 211 Financial Accounting and ACC 212 Managerial Accounting*

This course is intended to help you understand the theory of auditing, including the educational and ethical qualifications for auditors, as well as the role of the auditor in the American economy. By the end of the course, you should be familiar with the professional standards, professional ethics, and the legal liability of auditors. As a manager, you should be able to effectively plan and design an audit program, gather and summarize evidence, and evaluate internal controls.

### **ACC 415 Advanced Financial Management**

**3 credits**

*Prerequisite: BUS 350 Principles of Finance*

The financial well-being of individuals and families requires managers to weigh risk versus return, in making investment decisions for corporations. Financial skills are also applied in your personal life, as you accept a loan, save for retirement, or apply for a mortgage. This course is designed to strengthen your capacity to make complex financial decisions—to evaluate assets, investments, financing options, instruments, and opportunities.

### **ACC 417 Individual and Corporate Taxation**

**3 credits**

*Prerequisite: ACC 211 Financial Accounting*

This course provides an understanding of the principles of federal income tax and its applications. It will identify and analyze federal tax issues to support the design of effective tax plans used to ensure tax compliance and improve financial decision-making. Upon completion of the course, students will be able to recognize and evaluate fundamental tax issues that affect both individuals and corporations.

### **ART 102 History Of Western Art Since The 15th Century**

**3 credits**

*Prerequisite: None*

This course will empower students to look at and understand Western art from the time of the Renaissance to the early 20th century, covering painting, sculpture, and architecture. It focuses on the power of perception and visual storytelling so that students become engaged with specific art examples from each period and culture. Students will analyze famous works by Michelangelo, Caravaggio, Vincent Van Gogh, and many more brilliant artists. By developing a sophisticated eye,

students will learn how artworks reflect their cultural origins and their individual creators, who give shape and meaning to their art. By the end of the course, students will be surprised at their recognition and knowledge of art that they see operating in American culture now.

All materials are open educational resources, meaning they are all available online with no expense to the student.

### **BIO 110 Biology (Non-Lab)**

**3 credits**

*Prerequisite: None*

This is a course designed for students who need to complete the General Education requirement for math and science as well as for those considering majoring in the natural sciences. The course covers the major areas of study and aspects of life on our planet explored by biologists. The course moves from the cellular and biochemical level through all classifications of living organisms to the examination of ecology and the biosphere. Students will also spend time examining the process of evolution for both populations and species. There is a final project that the students will work on throughout their time in the course. This final project is a presentation that will utilize both audio and video recordings. Several discussions in the course will require audio recordings to be submitted. Students are expected to be able to access the appropriate technologies to complete these assignments. Freely available technology options will be provided in the course.

Students needing the laboratory experience concurrently should register independently for BIO 111 Biology Laboratory (1 credit)

### **BIO 111 Biology Laboratory**

**1 credit**

*Prerequisite: None*

This one-credit laboratory-based course will engage you in several virtual laboratory activities using Labster, a virtual laboratory program, and additional activities. As you complete each laboratory exercise, you will answer questions to demonstrate your understanding of the material. Upon completion of these virtual labs, you will learn about laboratory safety, scientific method, energy utilization, cellular reproduction, genetics, evolution, and ecology.

### **BIO 115 Anatomy and Physiology I (Non Lab)**

**3 credits**

*Prerequisite: None*

This course focuses on the structure and function of the human body. Topics and body systems that will be studied include: the chemistry of life, histology and the integumentary system, skeletal and articulation system, muscular system, nervous system, sensory system and the endocrine system.

---

**BIO 115L Anatomy and Physiology I LAB****1 credit**

---

*Prerequisite: None*

This is a laboratory course that utilizes simulations and hands-on experiments to study body systems that include: cells, blood, integumentary system, muscular system, nervous system, skeletal system and the endocrine system. Students use the scientific method in an experimental environment, learn and use safe laboratory practices, perform dissections, perform experiments, gather and analyze data, and present data and conclusions in scientific laboratory reports.

---

**BIO 116 Anatomy and Physiology II (Non Lab)****3 credits**

---

*Prerequisite: None*

This course focuses on the structure and function of the human body. Topics and body systems that will be studied include: blood, the cardiovascular system, lymphatic and immune system, respiratory system, digestive system, nutrition and metabolism, urinary system and fluid balance, and reproductive systems.

---

**BIO 116L Anatomy and Physiology II Lab****1 credit**

---

*Prerequisite: None*

This is a laboratory course that utilizes simulations and hands-on experiments to study body systems that include: temperature regulation and metabolism, fluid and electrolyte balance, digestive system, respiratory system, cardiovascular system, urinary system, the reproductive system, and human development and genetics. Students use the scientific method in an experimental environment, learn and use safe laboratory practices, perform dissections, perform experiments, gather and analyze data, and present data and conclusions in scientific laboratory reports.

---

**BIO 212 Microbiology****3 credits**

---

*Prerequisite: None*

This course is an introduction to microbiology. It covers the fundamental concepts of microbiology, including the study of bacteria, viruses, fungi, protozoa, and algae. Students will explore the structure, function, genetics, and physiology of microorganisms, as well as their roles in the environment and human health. Microbiology covers the scientific methods necessary to understand microbial growth and metabolism and provides a historical perspective by reviewing the major scientific contributions that led to modern-day microbiology. Our scientific inquiry will include case studies, a variety of visual aids, virtual labs, discussions, and written assignments.

---

**BIO 340 Biodiversity****3 credits**

---

*Suggested Prerequisite: BIO 110 Biology or equivalent*

Scientists have stated that we are experiencing the sixth mass extinction of biological diversity since the Earth formed and that we may well be in a new geological age, the Anthropocene Epoch. Through readings and numerous activities, this course examines the rise and fall of biological

diversity over time through the study of ecology, evolution, and conservation biology. Topics include the meaning and value of biodiversity, major threats to species and ecosystems, and efforts to conserve, manage, and sustain biological diversity.

---

### **BNS 101 Introduction to National Security**

**3 credits**

*Prerequisite: None*

This interdisciplinary class introduces the theory and practice of national security policymaking in the United States. It addresses many facets of national security, including the evolution of U.S. national interests and national security practices over time, the agencies and individuals that carry out key national security roles, and debates about the place of the United States in the world today. It also examines specific facets of U.S. national security strategy, including alliances, wars, diplomacy, economics, and soft power (culture, ideas, and values). The class combines theoretical approaches with hands-on opportunities to analyze contemporary national security threats and challenges.

---

### **BNS 301 National Security Ethics and Diversity**

**3 credits**

*Prerequisite: None*

Have you ever wondered if a decision you made or an action you took was “right” - for yourself and for others; for the many, even if not for some few? Have you ever thought deeply upon the classic question—do the Ends justify the Means? In this course you will engage these and other questions, while also focusing on the practical study of ethics in the national security arena. You will examine ethical subjects and dilemmas facing individuals, institutions, societies and governments, both at home and abroad. You will examine ethical concepts and principles to find meaning in specific behaviors, and theory will be related to real-world application. You will evaluate how ethical principles relate to diversity considerations and practices in the national security arena. The ethical and diversity dimensions of public service and national security are explored through a focus on officials working in the broad range of occupations in national security.

---

### **BNS 303 Comparative National Security Analysis**

**3 credits**

*Prerequisite: None*

Why do some countries find security without large militaries, while others seem compelled to build and use them? Why do countries around the world differ so much in how they make and execute national security policy? This course focuses on the complex process tying national interests to security policies of nation-states in the conflicting realm of international relations. You will review aspects of national culture, resource economics, and practical policy analysis, for example, to better understand how identity, power, and national security are constructed in countries around the world. You will become adept at assessing underlying national power dimensions, which drive nation-states in diplomacy and war, among other behaviors. You will evaluate another nation-state’s national security in depth while also exploring several of the dimensions of national power and identity in great detail. The course serves national security professionals by deepening the understanding of how national security varies so widely and how difficult it is to achieve stability among the nation-states of the world.

### **BNS 305 Cybersecurity in National Security**

**3 credits**

*Prerequisite: None*

This course focuses on the emerging security issues that arise from an ever increasing presence of computers and computer enabled devices in the defense, intelligence, and economic fabric of modern life. This course examines the definitions of cybersecurity and cyber risk in a national security context in order to inform future leaders and practitioners of the opportunities and challenges of cyberspace. This course concentrates on the policy dimensions of cybersecurity rather than the technical aspects of network defense and attack. Issues of cybercrime, cyber espionage, cyber war, and cyber diplomacy will be considered. Future leaders in national security must understand the possible approaches to cybersecurity and the impacts cyber policy can and will have on U.S. National Security as well as global security.

### **BNS 307 Intelligence in National Security**

**3 credits**

*Prerequisite: None*

This course focuses on the United States Intelligence Community and the processes to collect, analyze, and disseminate intelligence to national security policymakers. Students examine what intelligence is, the development of the Intelligence Community agencies, and the role each agency contributes to national security. Application of critical thinking is used to determine the methodology of conducting intelligence in a democracy in order to define what the Intelligence Community can, or cannot do. This course will benefit students interested in national security, military studies, international relations, and political science.

### **BNS 498 National Security Capstone**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The National Security capstone seminar course is the culmination of your undergraduate education. Upon completion of this course, you will have earned a bachelor's degree in National Security, a valuable degree in your ongoing professional development and continued service within the national security community. Yet, it is murkier now more than ever as to what American "nation" is to be secure against which threats, and through which means? Your previous coursework illuminated the complex and interdisciplinary field of national security affairs, and some of the many security challenges facing the US at home and abroad. You have reviewed how nation-states around the world differ in these grand strategic formulation dilemmas, and, in this course, you will dive deeper still into the national security challenges confronting the US (and its key allies). You will examine several of these enduring and emerging threats and opportunities, as well as the particular challenges a democracy confronts in pursuing a successful grand strategy.

## **BUS 222 Business Communication**

**3 credits**

*Prerequisite: None*

This course will provide students with knowledge and skills to effectively communicate in global business environments. Additionally, students will develop and evaluate both written and oral business communications. While learning to identify cultural aspects of verbal and nonverbal behavior of persons from different cultures and themselves, students come to recognize cultural differences that can cause communication challenges in management situations.

## **BUS 225 Consumer Behaviors**

**3 credits**

*Prerequisite: None*

In this course, students will explore the principles of consumer behavior by reviewing topics about consumer motivation, perception, learning, attitude, and information processing. Additionally, students will discover the impacts of life-style, demographics, social class/culture, groups, leaders, family, and diverse/global environments on consumer behavior. Students will examine consumer behavior from a marketing strategy perspective to successfully develop products and services that will fulfill the wants and needs of individuals in the marketplace. Students will look at the factors influencing acquisition and consumption of products and services.

## **BUS 230 Business Law**

**3 credits**

*Prerequisite: None*

This course provides an analysis of key legal issues affecting businesses. There is an emphasis on the development of legal strategies to support the venture over its expected life cycle. This course also focuses on the legal environment of the United States. Students examine a series of real-world scenarios and apply the legal tools developed during the course to those cases.

## **BUS 231 Business Data Literacy**

**3 credits**

*Prerequisites: None*

This course develops data literacy and statistical thinking and essential skills for business process improvement. Topics covered include descriptive statistics and data visualization, distributions, sampling, Central Limit Theorem, estimation using confidence intervals, statistical inference, and single and multiple regression analysis.

This course duplicates: BUS 233 Business Statistics, MAT 201 Statistics, and MAT 215 Statistics for Health Care Professionals. Credit in only one of these courses will be applied toward graduation.

### **BUS 235 Financial Markets and Institutions**

**3 credits**

*Prerequisite: None*

This course studies the fundamental principles which govern global financial markets and institutions. Some topics include: characteristics of financial instruments and establishments, the Federal Reserve, monetary policy, the banking industry, and capital markets.

### **BUS 299 Business and Management Capstone**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

An online portfolio development experience that requires students to reflect on their past academic and professional experiences and use the information gained from this reflective exercise to develop learning statements related to the Associate of Applied Science in Administration/Management Studies degree outcomes. The learning statements must be supported by documented evidence that demonstrates that the outcomes have been met. Students learn how to develop an online portfolio during the first module of the course and then work under the guidance of a faculty mentor during the remainder of the semester to compose learning statements, compile appropriate evidence, and create the Integrated Business and Management Assessment report.

### **BUS 300 Introduction to Entrepreneurship**

**3 credits**

*Prerequisite: None*

In this introductory course, you will gain insight into what entrepreneurship is as well as the varying types of entrepreneurs that exist. Part of the focus for this course will be assessing the environment for entrepreneurship so that you can better prepare yourself for your venture. This course will also help you determine the entrepreneurial route you envision for yourself. This course concludes with an evaluation of the various types of business models available for business persons.

### **BUS 310 Entrepreneurial Marketing**

**3 credits**

*Prerequisite: BUS 300 Introduction to Entrepreneurship*

Entrepreneurs face unique challenges in promoting a new business or in competing in extremely challenging and uncertain circumstances. Business marketing, whether an established business or a entrepreneurial start-up, encompasses much more than just advertising. It involves research on the industry, marketing, and market, which are used to define a target market and market segmentations. It also involves developing a marketing budget, researching media platforms, and determining promotional material costs. Distribution channels are a vital part of marketing as well. Finally, the marketing strategy describes business marketing goals and objectives in a unified plan. Each of these essential components will be examined within this course. Students will actively research and apply each component to their own business ventures, which will culminate in the development of a marketing plan.

**BUS 311 Organizational Behavior****3 credits**

*Prerequisite: ENG 101 College Composition or ENG 101A Advanced Composition*

This course focuses on the crucial behaviors of organizations at the individual, group/team, and organizational level. It examines how external and internal forces influence behaviors such as leadership, communication, management, employee motivation, engagement, and valuing diversity. The focus on domestic and global organizations includes private, public, and military organizations and the impact of organizational behavior on the effectiveness of the organization.

**BUS 312 Managing Human Resources****3 credits**

*Prerequisite: None*

Human resources has evolved over the years. However, some of the basic tenets of understanding still remain and are necessary for both employers and employees. In this course, students will uncover topics including the role and context of human resource management, fair employment practices, human resource planning, human resource staffing, performance management, employee development, employee compensation, and labor relations.

**BUS 313 International HR****3 credits**

*Prerequisite: None*

This course provides an in-depth study for the human resources practitioner and international line manager to the legal, practical, and successful human resources strategies used by international companies in today's global economy. Students will examine best practices in the global environment. Topics include: recruitment and staffing, compensation, benefits, labor laws, employment-related taxation, leadership, management, and supervisory practices among international corporations, immigration, permanent resident and temporary work visa status, and expatriate and repatriation policies and practices with respect to recruitment, training, performance management, and repatriation.

**BUS 315 Labor Relations****3 credits**

*Prerequisite: None*

This course focuses on the study of the relationships between unions and employers, including various aspects of labor history, law, and collective bargaining. In addition, it will examine issues such as public sector unionism and unionism around the world. A core emphasis will be the changing nature of labor-management relations in the United States as a result of global competition and the internationalization of markets. Finally, the course touches on patterns of union resistance and preventive labor relations strategies.

**BUS 323 Business Ethics****3 credits***Prerequisite: None*

Questions of ethics seem inextricably intertwined with business these days: Facebook and the Cambridge Analytica scandal, Wells Fargo, and Harvey Weinstein. The manager in today's workplace, whether they are in the private or public sector, needs to understand the ethical climate in which they are operating and navigate a path that allows them to acknowledge, understand, and act appropriately when faced with an ethical dilemma. This course will encourage you to prepare for the ethical challenges that you might face, through an exploration of ethical theory and the way in which personal values and ethical behaviors impact the culture of an organization. On completing this course, you will gain a greater understanding of how ethical principles relate to organizations within which they operate and how the perception of ethics can impact an organization in terms of reputation, functioning, and performance.

**BUS 325 Women In Business****3 credits***Prerequisite: None*

Although women have made inroads as managers and leaders, they still continue to lag their male counterparts in reaching the executive suites and boardrooms of many major organizations around the globe. This study will examine a number of theories and findings looking at the roadblocks women continue to face in their quest for upward mobility, as well as offering insight into how women are gaining access to upper management. Topics covered will include:

1. The economic strength of women as a market,
2. An examination of the status of women in the United States compared with other countries,
3. Obstacles faced by women such as the glass ceiling, nonlinear career paths, and work/life/family balance,
4. The importance of attracting and retaining talented women, and
5. Leadership styles and traits of women.

**BUS 341 Management Concepts and Applications****3 credits***Prerequisite: None*

A study of fundamental management theories, examining the manager's role in today's global business environment. Topics include the role of managers in the business environment, strategies for planning and decision making, organization and controls, leadership, motivation, staffing, and managing change.

**BUS 343 International Marketing****3 credits***Prerequisite: BUS 351 Marketing Concepts and Application*

This course presents a systematic framework for understanding international marketing management and global business strategy. The course focuses on creating and executing global marketing strategies and policies by examining the cultural, political, legal, ethical, and economic issues relevant to the development of effective global marketing strategies and policies in the digital age.

### **BUS 350 Principles of Finance**

**3 credits**

*Prerequisite: ACC 211 Financial Accounting and ACC 212 Managerial Accounting*

An introduction to the discipline of finance, this course examines general principles of finance and corporate finance. Topics include financial objectives of the firm, the time value of money, risk and return, capital budgeting, the cost of capital, financial forecasting, and ratio analysis, working capital management, EVA and MVA concepts, and current and future trends in corporate finance.

### **BUS 351 Marketing Concepts and Application**

**3 credits**

*Prerequisite: None*

Successful businesses develop effective strategies to meet the needs of their customers. Marketing is about how businesses interact with consumers and the processes by which they anticipate, analyze, and meet their needs. It is both a philosophy of doing business and a management activity that puts the customer at the heart of everything that the organization does. Marketing ensures that the customer gets the right product, at the right time, and in the right place. Marketers both develop and apply a range of communications, creative, and technological techniques that allow them to work at both the tactical and strategic levels within organizations and across a range of global businesses and industries. In this course, we will look at some of the fundamental concepts of marketing and then explore how marketing managers can put them into practice in the real world.

### **BUS 352 Digital Marketing Fundamentals**

**3 credits**

*Prerequisite: None*

This course will focus on the fundamental concepts, tools, terminology, methods, and practices that relate to current trends in digital marketing by drawing from the very latest practitioner thinking. Students will explore and closely examine social media marketing as part of an overall content marketing strategy. An exploration of search engine optimization, Pay Per Click (PPC), and digital display advertising, will give the student an overview of current methods and practices and provide practical application of the skills learned. Email, mobile and new technologies will also be evaluated. The importance of good analytics will also be emphasized with a review of the current thinking and practices. The course will culminate in the integration of some of the previous learning in terms of the development of a buyer persona, which forms a key element of a digital marketing strategy.

### **BUS 375 Marketing Management**

**3 credits**

*Prerequisite: None*

This course provides students with the necessary tools and frameworks to better prepare them for making effective marketing decisions. Students will explore effective marketing strategies across global business organizations. They will investigate concepts, theories, and real-world applications to create and implement a marketing strategy for launching a product. This course focuses on both the strategic planning process and marketing's cross/inter-functional relationships. Students will discover market opportunities, forecasting, targeting, and brand positioning for new and mature markets. They will examine how to organize, plan, implement, and measure an effective marketing campaign.

**BUS 380 Managing Diversity in the Workplace****3 credits***Prerequisite: None*

This course introduces students to the concept of diversity consciousness, a concept that goes beyond diversity training to develop an awareness and understanding of diversity in all its aspects. It examines the demographic variables that include race, ethnicity, culture, religion, age, physical and mental ability and gender and sexual orientation, as well as socio-economic class and family status. It emphasizes the skills needed in working with and supervising a diverse workforce and reviews the obligations and rights of both the employer and employee under the laws against discrimination enforced by Equal Employment Opportunity Commission in the USA.

**BUS 381 Transportation, Warehousing, and Distribution****3 credits***Prerequisite: None*

This course provides a fundamental understanding of transportation, warehousing, and distribution operations within the logistics industry. The curriculum is built to enable students to competently utilize transportation and distribution models, including identification of end-to-end consumer requirements. Throughout its duration, this course will offer numerous examples of how to incorporate transportation, warehousing, and distribution strategies. Inventory control decisions; supply chain requirements; intermodal operations; and, distribution efficiencies are stressed within the curriculum and cases.

**BUS 425 Operations Management****3 credits***Prerequisite: None*

This course provides an overview of the systematic planning, designing, operating, controlling, and improving processes that transform inputs into finished goods and services. It develops students' abilities to recognize, model, and solve problems inherent in production and service environments. Specific topics include product and process design, queuing, facility layout and location, linear programming, decision analysis, forecasting, and inventory models.

**BUS 431 Business Data Analysis****3 credits***Prerequisite: BUS 231 Business Data Literacy or BUS 233 Business Statistics*

The overarching goal of this course is to help managers make better decisions. Management guru, W. Edwards Deming, once said all "management is prediction of future results" (Wood & Wood, 2005). If we do not know how to estimate the impacts of decisions on future outcomes, we limit ourselves to guessing with our gut instead of applying a real analysis based on data science (Bonabeau, 2003). In this course, students will learn how to develop Excel statistical and decision models and create basic data visualizations, which will help students become data savvy and provide them with essential Excel skills, both of which are necessary to be competitive in a professional work environment.

It will include a review of important statistical methods; use of time series for forecasting; application of regression analysis; aspects of decision theory including model building, linear optimization,

simulation, optimization with and without risk and uncertainty; and methods to effectively communicate the results and rationales to management in tables and using graphs.

The course also includes use of Tableau to create more effective data visualizations and data stories. Students will install Tableau on their computer a 1-year free Tableau student license.

Microsoft Excel (Mac or PC) is required. Cloud-based versions of Excel are not recommended. The ability to install 3rd party Excel add-ins on your PC/Mac is required. All students should update to the most recent version of Excel.

### **BUS 435 International Business**

**3 credits**

*Prerequisite: None*

In this course, we'll examine and analyze global business in its historical, theoretical, environmental, and functional dimensions. Our focus will be on understanding the growing economic interdependence of nations and the impact of that interdependence on managerial and corporate policy decisions that transcend national boundaries.

This course will also provide an introduction to globalization and the cultural, economic, political, and legal environments of international business, including an overview of risks, challenges, and opportunities of competing in the global marketplace.

Your key challenge will be to develop and present a business plan to launch a product or service of your choice in a foreign market.

### **BUS 437 Securities Analysis**

**3 credits**

*Prerequisite: BUS 350 Principles of Finance*

The financial crisis of 2007 showed the importance of securities to our daily lives. This course focuses on the tools of fundamental analysis, the concept of risk and investment management. Students examine security valuation, risk measurement, portfolio diversification and portfolio performance measurement preparation of pro forma financial statements. The goal of the course is to provide students with a strong theoretical and applied understanding of the valuation of equity securities.

### **BUS 440 Business Supply Chain Management**

**3 credits**

*Prerequisite: None*

This course presents an examination of logistics and supply chain systems. The focus is on analyzing, designing, and implementing systems. Topics include supply chain management strategy, planning, and operations; the role of e-commerce; and financial factors that influence decisions. Discussion also covers the trade-offs between cost and service and between the purchase and supply of raw materials; the warehousing and control of inventory; industrial packaging; materials handling within warehouses; and the distribution of finished goods to customers required to minimize costs, maximize profits, or increase customer service levels.

## **BUS 442 Inventory Management**

**3 credits**

*Prerequisite: None*

This course provides a fundamental understanding of inventory management, control, and turnover as applicable to procurement and logistics operations. The curriculum is designed to enable students to competently utilize inventory management techniques, including costing (ordering, holding, and carrying); demand (both deterministic and probabilistic); inventory modeling; stocking, restocking, and outsourcing; and, the use of inventory management technology. Throughout its duration, this course will offer numerous examples of how to apply “fill rate concepts”; “material handling and storage methods”; “logistics storing and tracking procedures”; and, “order cycle time techniques”. Inventory forecasting, supply & demand management, and inventory planning are stressed within the curriculum and cases.

## **BUS 443 Lean Logistics**

**3 credits**

*Prerequisite: None*

This course provides a fundamental understanding of lean applications toward inbound and outbound logistics networks, and the role of leadership to develop corporate logistics strategy. The curriculum is built to enable students to competently utilize professional lean logistics methods and techniques, including identification of areas of waste, ability to decrease inventory, and increase logistics throughput. This course will offer numerous examples of how to apply “lean logistics thinking”; “total logistics cost”; “logistics demand patterns”; and, “logistics planning-operational bridging techniques”. Cross-functional logistics teamwork, logistics operational strategy, logistics functions, inventory reduction, and operational logistics networks are stressed within the curriculum and cases.

## **BUS 450 Operations Strategy**

**3 credits**

*Prerequisite: BUS 425 Operations Management or equivalent*

Production management is crucial for achieving efficiency in manufacturing and service industries in today’s marketplace. Students will explore the connections between various business activities and processes which impact production. Some of these areas include the organization’s ability to meet product specifications, adhere to contractual requirements, schedule deliverables, and effectively utilize available resources to attain profitability. Students will study the influences on production outcomes, with an emphasis on facilities layout, capacity management, process analysis, quantitative work measurement, and production control. The course will enhance students’ understanding of production activities, processes, and systems by investigating business tools for effective production management.

## **BUS 452 Business Leadership**

**3 credits**

*Prerequisite: None*

This course will examine the differences and continuities between management and leadership, and also explore the current theories and styles in contemporary leadership thought, such as the more recent interest in servant leadership. Evaluating the skills and tools needed by the effective business leader, we will also assess leadership in context and examine the important role of strategic leadership in the management of change in a world that is increasingly volatile, uncertain, complex, and ambiguous.

## **BUS 453 Recruitment and Selection**

**3 credits**

*Prerequisite: None*

This course provides an in-depth study for the human resources practitioner to the legal, practical, and successful human resources strategies used by domestic and international companies in today's global economy. Students will examine best practices in recruitment and selection for organizations derived from legislation, management theory and practice and social science research. It covers the staffing activities practiced in all types of organizations. Particular emphasis will be placed upon cases analyses and business applications. This course also includes correct planning of job interviews and interview routine. Students will learn different types of job interviews and their proper use in practice, the use of assessment centers for selection of new employees, psychological testing as well as other methods of selecting new employees.

## **BUS 454 HR Analytics**

**3 credits**

*Prerequisite: None*

You will investigate the complex field of Human Resource (HR) analytics, including how decision making in organizations is facilitated or impeded by existing information architecture and processes, methods for improving an organization's analytical capabilities, and facilitating analytics technology implementations. A major focus of the course will be on the use of human resource information systems (HRIS) for collecting and analyzing human resource data. Students will learn how to apply analytical processes and technologies to enable strategic decision making by an organization's leaders. In addition, students will learn how to improve organizational effectiveness through the use of human resource technology. Both enablers and barriers to effective deployment of HR analytics technologies will be discussed, as well as issues related to data integrity and data governance. You will be challenged to apply an HR analytics framework to a robust healthcare organization case study, developing a combination of descriptive and predictive measures.

## **BUS 460 Market Research**

**3 credits**

*Prerequisite: None*

This course examines the systematic design, collection, analysis, and reporting of data relevant to the marketing function within the organization. It specifically addresses the growing role that technology plays in predicting consumer behavior, marketing trends, addressing marketing problems, and the development of new products and services.

## **BUS 490 Integrated Business and Management Assessment BPB**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This is a capstone course in the Bachelor of Professional Studies (BPS) in Business and Management. Students will analyze complex management situations to make strategic decisions related to process improvement.

### **BUS 499 Strategic Management Capstone**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This capstone course is a culminating course that allows students to integrate concepts, principles, and methods from all fields of business. Students will draw on their foundational core business knowledge and professional competencies to solve business problems typically found in the real-world. The competencies for this course were developed by faculty and industry experts and validated by industry advisors to ensure the goals of the course are aligned with job market requirements. The business simulation will incorporate the program knowledge and competencies acquired in accounting, finance, operations, information technology, marketing, management, diversity/inclusion, and business ethics. Additionally, the simulation and class readings and resources are designed to foster students' strategic thinking and strategic management decisions. In so doing, additional discussion and writing assignments will highlight business writing, critical thinking, adaptive performance, and business communication. Throughout this class, students will be expected to integrate their learning across the business curriculum, evaluate their individual strengths and weaknesses, and develop an action plan to ensure their life-long learning and adaptability in the business environment.

### **CHE 101 General Chemistry I**

**3 credits**

*Prerequisite: MAT 114 Intermediate Algebra or MAT 116 Precalculus Algebra or MAT 120 Precalculus*

General Chemistry examines topics including chemical nomenclature, measurement, states of matter, the atom, chemical bonding, solutions, stoichiometry, and thermochemistry, and how these apply in the world around us. The purpose of this course is to introduce you to the world of chemistry which covers such topics as the structure of the atom and the basic physical laws that govern matter. You will learn about the processes chemists and scientists use to determine the composition and nature of matter.

### **CHE 101L General Chemistry Laboratory I**

**1 credit**

*Prerequisites: CHE 101 General Chemistry I. May be taken concurrently with CHE 101.*

The purpose of this course is to learn how to apply the scientific method to the study of various chemistry topics and to gain experience using a formal scientific experimental process with analysis and calculations to mirror the research and experimentation used in the field of chemistry.

## **CJ 101 Introduction to Criminal Justice**

**3 credits**

*Prerequisite: None*

This course is an introductory examination of the American criminal justice system with an understanding of its social and institutional context, unique structure, and functioning. The course provides an overview of the foundations and components of the criminal justice system, including (substantive and procedural) criminal law, police, courts, and corrections. Emphasis will be placed on the criminal justice process itself and how the various institutions of criminal justice interact. Key issues will be addressed such as individual rights versus public order, defining and measuring crime, knowledge of criminal law, and the challenges, issues, and limitations facing the police, the courts, and the rehabilitation system—within the context of our U.S. Constitution. Different aspects and stages of this process will also be explored.

## **CJ 110 Introduction to Law Enforcement**

**3 credits**

*Prerequisite: None*

This course examines the history, evolution, roles, legal foundations, and challenges faced by contemporary law enforcement. The structure of law enforcement agencies, personnel, and administration will be discussed. Emphasis will be placed on the functions, responsibilities, and public accountability of law enforcement within American society, as well as career opportunities and alternatives in the field of law enforcement.

## **CJ 120 Introduction to Corrections**

**3 credits**

*Prerequisite: None*

This course covers the history, organization, and functions of corrections within the criminal justice system, and emphasizes the evolution of corrections for the rehabilitation of offenders. Topics covered include the various forms of corrections, alternatives to incarceration, types of inmates and their issues, and the future of correctional systems in American society.

## **CJ 228 Multicultural Issues in Criminal Justice**

**3 credits**

*Prerequisite: None*

This course focuses on issues relating to the challenges presented to law enforcement officers and agencies by increasingly diverse communities and work forces. It places these complex dynamics in social and historical context and points to skills and strategies for police officers and agencies to better understand and communicate with those who are different because of gender, sexual orientation, race, ethnicity, religion, or culture. Ultimately it is the goal of this course to present a clear understanding of the highly globalized, multicultural country we live in as well as ways to make law enforcement more cohesive among the many cultures they will encounter.

## CJ 256 Criminal Justice Administration

3 credits

*Prerequisite: None*

This course provides a comprehensive discussion of criminal justice administration through the integration of relevant theories, research findings, and the application of best practices within criminal justice organizations. Included in this course are the basic concepts of an organization, management, and the criminal justice system's environment; issues regarding communication, motivation, leadership and job design. Additionally, the areas of group behavior and processes within criminal justice organizations regarding occupational socialization, power and political behavior, organizational conflict and effectiveness, decision-making, and change and innovation will be covered.

## CJ 265 Criminal Procedure and Evidence

3 credits

*Prerequisite: None*

This course provides a comprehensive review and in-depth analysis of the rules of evidence and criminal procedural law in the United States. Students will analyze case law which interprets the constitutional guarantees afforded by the 4th, 5th, 6th, 8th and 14th Amendments, and the admissibility of evidence in court proceedings. Particular emphasis is placed upon arrest, search and seizure, confessions and admissions, the privilege against self-incrimination, the right to counsel, the exclusionary rule and its exceptions, burden of proof, and procedural due process.

## CJ 298 Criminal Justice Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The capstone course is intended as the last course for students in the criminal justice major. Students must have completed INL, WER and their required criminal justice coursework prior to taking this course. Also, a student must be within 9 credits of degree completion and obtain academic advisor approval to register.

The capstone course is designed to allow learners the opportunity to coalesce what they have learned about criminal justice throughout the program. Learners will analyze various aspects of the criminal justice system and apply their knowledge to discuss, generate, and propose solutions regarding technical, legal, ethical and demographic issues that may arise in this field.

## CJ 301 Juvenile Delinquency and Justice

3 credits

*Prerequisite: None*

This course explores the judicial processes employed in handling minor criminal offenders; those generally under the age of 18 years. These include arrest, legal guardian responsibilities, sealed court records, case adjudication, sentencing and juvenile corrections. Also covered are the biological, psychological, and sociocultural aspects of delinquency and its causes, potential deterrence and rehabilitation modalities.

### **CJ 315 Gangs in America**

**3 credits**

*Prerequisite: None*

Gangs continue to scourge the American criminal justice system. Since the 1990s street gangs have multiplied in number and are no longer simply an inner-city problem. The nationwide effort to manage this enigma is far reaching beyond just criminal justice professionals. The problem is a complex one that is far reaching into the homes of every citizen in every community. This course is designed to assist students in developing an understanding of what a street gang is, provide an overview of the historical and contemporary street gang, and examine efficacy of some past and current methods used to address their influence. Particular attention will be devoted to gang types, diversity, theoretical explanations as well as an analyze the responses, intervention and prevention strategies, and public policy issues.

The content in this course is mature and may be disturbing. It should be given serious consideration and treated with due diligence.

### **CJ 324 Criminology**

**3 credits**

*Prerequisite: None*

This course provides an in-depth study of the nature and causes of crime and criminal behavior. Using a multidisciplinary approach, the course focuses on criminal topologies and criminological theories. Topics range from crime causation to the extent of crime, victimization, and social and psychological theories. Learners will address various types of criminality such as violence, property crimes, and public offenses, as well as the application of these theories to criminal justice policies and procedures.

### **CJ 330 Judicial Process**

**3 credits**

*Prerequisite: None*

This course explores the structure of the United States' court system, how it operates and what it does; in essence, the functions and processes of the American judicial system. Civil and criminal trial courts and appellate courts and processes will be discussed, as will alternative dispute resolution mechanisms. We will also look at why courts function in certain ways, looking at the how the various actors influence the courts, particularly those involved in the judicial selection process and the judges themselves. Finally, we will engage in an evaluation of judicial process and the court system in the U.S.: its positives and negatives; comparison with court systems in other countries; and proposals for change.

### **CJ 338 Criminal Justice Administration**

**3 credits**

*Prerequisites: None*

This course provides a comprehensive discussion of criminal justice administration through the integration of relevant theories, research findings, and the application of best practices within criminal justice organizations. Included in this course are the basic concepts of an organization, management, and the criminal justice system's environment; and issues regarding communication, motivation, leadership, and

job design. Additionally, the areas of group behavior and processes within criminal justice organizations regarding occupational socialization, power and political behavior, organizational conflict and effectiveness, decision-making, and change and innovation will be presented.

---

**CJ 365 Police and the Community****3 credits**

*Prerequisite: None*

This course offers an in-depth examination and analysis of the relationship and interactions between American law enforcement and the communities they serve. Many aspects of policing are explored at intermediate and advanced levels, to include patrol, community policing, diversity issues, and other current issues and controversies in municipal policing.

---

**CJ 380 Ethics in Criminal Justice****3 credits**

*Prerequisite: None*

Examines ethical issues specifically related to the criminal justice profession. Issues include professional communications including government regulation and policy, free speech, client/victim/investigative privacy, accuracy in media and the impact of science and technology on communications.

---

**CJ 432 Drugs and Crime****3 credits**

*Prerequisite: None*

This course analyzes the historical, political, economic, social, psychological, and cultural factors that influence the use of illicit, misused, or abused substances. The coursework will include a study of the influence these factors have on the social and legal responses to drug use, including legislation, law enforcement, drug courts, and associated policies and procedures.

---

**CJ 498 Criminal Justice Capstone****3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Criminal Justice Capstone is the final course where students will demonstrate their ability to synthesize and apply all they have learned in the criminal justice program. Students will assess the interactions of police, courts, and corrections through the lens of a wrongful conviction case. Students will utilize criminological theories and legal standards to evaluate the outcomes of the case and will analyze the impact on all aspects of the criminal justice system. Students will create policy solutions to support diversity and equity and meaningful criminal justice reform.

## **COMM 125 Public Speaking**

**3 credits**

*Prerequisite: None*

This course helps students to develop their skill as public speakers and oral communicators. Designed to provide students with a supportive environment where they can overcome the anxiety they may feel about public speaking, the class emphasizes techniques and practices for effective speech construction and delivery. Students will also develop critical thinking and listening skills. Students taking this course will need access to recording equipment for the purpose of creating podcasts, voiced-over PowerPoint presentations and videotaped speeches.

## **COMM 210 Interpersonal Communication**

**3 credits**

*Prerequisite: None*

This course introduces students to the skills and theories of interpersonal communication, which are essential for building and maintaining successful personal and professional relationships. Students will evaluate the complicated interactions of psychological, social and cultural forces involved in interpersonal exchanges, while learning about personality traits, the perception of self and others, listening, managing conflict, and verbal and non-verbal communication.

## **COMM 423 Leadership and Team Building**

**3 credits**

*Prerequisite: None*

This course examines leadership and team building from the standpoint of communication theory. Students will learn about leadership theory and practice successful leadership models. Another major focus of the class is teamwork. Teamwork depends on different, complementary points of view to seize hidden opportunities, overcome difficult obstacles, and achieve challenging objectives to reach a common goal.

## **CS 311 Software Design and Architecture**

**3 credits**

*Prerequisite: IT 211 Fundamentals of Programming*

This course explores the fundamental principles and contemporary practices shaping the architectural landscape of software development, emphasizing the integration of cybersecurity practices and the societal impact of design choices. By surveying an array of architectural structures and styles, and design patterns to gain insights into their applications, students learn techniques for crafting software systems that are modular, maintainable, and scalable, strengthened by cybersecurity practices. This course teaches students to analyze the societal implications of design decisions, fostering an understanding of the ethical dimensions and responsibilities associated with software architecture.

### **CS 313 Software Requirements Engineering and Management**

**3 credits**

*Prerequisite: IT 211 Fundamentals of Programming*

This course focuses on the user-centered design process including gathering, analyzing, and documenting software requirements with a strong emphasis on communication skills, change documentation, and project usability. The curriculum explores modeling requirements using industry-standard tools such as UML, ensuring students acquire proficiency to communicate complex software specifications to diverse stakeholder groups. The course places significant emphasis on managing changing requirements throughout the software development process, equipping students with the skills to document alterations. Students master communications techniques for skillfully eliciting requirements from stakeholders, as well as refine their technical acumen and cultivate essential skills in effective communication, change documentation, and optimizing project usability for successful software development outcomes.

### **CS 315 Self-Reliant Language Learning**

**3 credits**

*Prerequisite: IT 211 Fundamentals of Programming and IT 313 Intermediate Programming*

This course explores the fundamental concepts and paradigms that underlie programming languages. The course models the process of language learning through the acquisition of C+. Next, students demonstrate their language learning skills by autonomously selecting a new language to learn, articulating the industry value in learning it, and creating a product that effectively demonstrates their successful acquisition of the chosen language. Students gain the approaches and skills necessary to learn new languages independently and leverage tools such as artificial intelligence to support the process.

### **CS 330 Data Structures, Algorithms, and Their Societal Impact**

**3 credits**

*Prerequisite: MAT 205 Discrete Structures*

This course investigates the fundamental principles of organizing and processing data, expanding beyond the traditional boundaries to incorporate cutting-edge applications in artificial intelligence (AI), social impact, and ethics. The curriculum covers a range of essential data structures, including arrays, linked lists, trees, and graphs, providing students with a solid foundation for data organization and manipulation. This course studies advanced algorithm design, emphasizing the strategic analysis of algorithmic complexity. Students gain proficiency in crafting efficient algorithms tailored for real-world problem-solving scenarios, emphasizing the responsibility of technologists in shaping a socially responsible and inclusive technological landscape.

### **CS 331 Foundations of Data Science**

**3 credits**

*Prerequisite: CS 330 Data Structures, Algorithms, and Their Societal Impact*

This course focuses on the user-centered design process including gathering, analyzing, and documenting software requirements with a strong emphasis on communication skills, change documentation, and project usability. Students will master communications techniques for skillfully eliciting requirements from stakeholders. The curriculum explores modeling requirements using industry-standard tools such as UML, ensuring students acquire proficiency to communicate complex software specifications to diverse stakeholder groups. The course places significant emphasis on

managing changing requirements throughout the software development process, equipping students with the skills to document alterations. Students refine their technical acumen and cultivate essential skills in effective communication, change documentation, and optimizing project usability for successful software development outcomes.

### **CS 333 Statistical Methods for Data Science**

**3 credits**

*Prerequisite: MAT 201 Statistics*

This course offers a comprehensive exploration of statistical concepts and techniques crucial for mastering the intricacies of data science. Key topics include hypothesis testing, probability distributions, regression analysis, and advanced statistical modeling. Emphasizing the practical integration of statistical theory with data science applications, this course equips students with the skills to analyze complex real-world datasets, draw meaningful insights, and make informed decisions within the field of data science, and formulate well-structured questions conducive to effective statistical analysis using tools such as SPSS.

### **CS 350 Network and Cloud Security: Principles and Practices**

**3 credits**

*Prerequisites: IT 250 Business Data Communications and IT 380 Overview of Computer Security.*

This course provides a study of security techniques for computer networks, with a specific emphasis on cloud environments. Topics include foundational network security principles, access controls, encryption, identity management, and strategies for cyber-attack prevention, all within the framework of established security policies. The course combines theoretical knowledge and hands-on exercises, preparing students to secure traditional networks, cloud infrastructures and hybrid deployments effectively. Upon completion, students possess skills aligned with industry standards, enabling them to develop and implement security policies that address the complexities of networking and cloud security.

### **CS 351 Cloud Computing Foundations**

**3 credits**

*Prerequisite: IT 250 Business Data Communication*

This course introduces the foundational principles of cloud computing. Students will explore diverse cloud deployment models, investigate the complexities of virtualization, and develop a nuanced comprehension of cloud service models such as Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). The course considers the impact of large data centers on society and the environment. This course provides students with practical experience configuring popular cloud platforms. By engaging in real-world scenarios, students will develop the skills needed to navigate and harness the capabilities of cloud computing environments effectively. Students will examine the unique challenges and security concerns related to securing data, applications, and infrastructure in a cloud environment. Upon completion of the course, students are equipped to leverage cloud computing technologies, implement secure cloud solutions, and contribute to the evolving landscape of networking and cloud computing.

### **CS 353 Network Design and Management: Integrating Cloud Technologies**     **3 credits**

---

*Prerequisite: CS 350 Network and Cloud Security: Principles and Practices*

This course explores the fundamental principles of network and cloud computing, emphasizing the considerations that architects and engineers must bear in mind throughout the lifecycle of cloud deployments and networks. It provides an understanding of essential topics in cloud computing, focusing on planning, design, and implementation. Students will acquire proficiency in network management tools and applications and gain insights into interoperability, cloud computing, and virtualization from a computer science perspective. The course focuses on the role of cloud computing in network system design and examines the broader impact of design choices on the efficiency, security, and scalability of network infrastructures. Within the course, students analyze the intersection of traditional network design principles with emerging technologies such as cloud computing and software defined networking, gaining insights into how design choices can shape the security and performance of hybrid network systems in the dynamic context of evolving technological landscapes.

### **CS 371 Machine Learning Foundations: Responsible AI Development**     **3 credits**

---

*Prerequisite: CS 315 Self-Reliant Language Learning*

This course examines machine learning, emphasizing supervised, unsupervised, and reinforcement learning algorithms. Students will gain proficiency in implementing and interpreting these algorithms. This course introduces fundamental concepts in ethical AI, transparency, bias mitigation, security, accountability, and social impact. Students engage in discussions on accessibility and inclusivity in AI development, establishing a practical and ethical foundation for responsible AI development.

### **CS 373 Natural Language Processing (NLP) and Emerging Applications**     **3 credits**

---

*Prerequisites: CS 315 Self-Reliant Language Learning, and PSY 340 Psychology of Learning*

This course immerses students in advanced Natural Language Processing (NLP) techniques, specializing in tasks such as sentiment analysis, language translation, and information extraction. Going beyond fundamental concepts, students explore the forefront of NLP applications, including innovative uses in technologies like chatbots and virtual assistants. Students uncover the seamless integration of NLP with cutting-edge advancements, empowering them to excel in the dynamic landscape of language-based technologies. Students attain mastery in the intricate nuances of NLP, refining their expertise in this transformative field.

### **CS 401 Theory of Computation and Computational Ethics**     **3 credits**

---

*Prerequisite: CS 330 Data Structures, Algorithms, and their Societal Impact*

This course explores the capabilities and limitations of computing devices. With a focus on ethical considerations and societal implications, the course scrutinizes theoretical foundations of computational theory, spanning from finite automata to Turing machines. Students will navigate the intricate landscape of computational models, critically assessing the models' ethical implications and practical constraints across computing scenarios. By intertwining theoretical depth with real-world relevance, students gain an understanding of the intricate relationship between formal models of computation and their broader implications on ethics and society.

## **CS 405 Human-Computer Interaction (HCI): AI Integration and Social Impact 3 credits**

---

*Prerequisites: CS 330 Data Structures, Algorithms, and their Societal Impact, and CS 315 Self-Reliant Language Learning*

This course in Human-Computer Interaction (HCI) focuses on the integration of Artificial Intelligence (AI), social impact, and ethical considerations. It extends beyond traditional HCI boundaries, recognizing that while humans shape computers, technology, in turn, shapes humans and society. Students examine AI integration within HCI, societal impacts, and ethical dimensions, gaining a comprehensive understanding of these dynamic relationships. They explore the intersection where intelligent systems and human users meet, emphasizing the reciprocal impact between technology and humanity. The course immerses students in the fundamental principles, methodologies, and design considerations at the convergence of HCI and AI, while navigating the ethical dimensions of technological innovation. By the end of the course, students are able to define HCI principles, analyze AI applications within HCI, and evaluate the social and ethical implications of technology.

## **CS 411 Software Project Management 3 credits**

---

*Prerequisites: IT 390 Project Management, and CS 313 Software Requirements Engineering and Management.*

This course examines methodologies, tools, and processes essential for orchestrating successful software design and adoption projects, emphasizing ethical guidelines and policies. Through applied case study techniques, students will enhance their software development planning and management skills. The course addresses essential aspects of project management, encompassing tasks such as defining project scope, scheduling, cost estimation, quality assurance, risk management, communication strategies, procurement oversight, securing stakeholder buy-in, conducting post-project assessments, and conscientiously evaluating the social impact of software projects. Upon completion, students are equipped to confidently lead and contribute to successful software projects, demonstrating an acute awareness of the broader societal implications of their projects, and guided by ethical considerations and policies.

## **CS 415 Software Testing and Quality Assurance 3 credits**

---

*Prerequisites: CS 313 Requirements Engineering and Communication for Software Development, and CS 315 Self-Reliant Language Learning*

This course examined advanced techniques for rigorously testing software functionality, reliability, and performance. Students will explore a diverse array of testing techniques, automated testing tools, and strategies for identifying and addressing bugs effectively. Through the integration of concepts of software penetration testing, students will gain proficiency in identifying and addressing vulnerabilities. Additionally, the inclusion of bug bounty strategies empowers students to adopt proactive approaches in uncovering and mitigating potential issues. Students master the foundations of software testing and understand emerging trends in software development through hands-on application and real-world scenarios.

### **CS 417 Software Engineering and Practice**

**3 credits**

*Prerequisite: CS 313 Requirements Engineering and Communication for Software Development*

Software Engineering and Practice immerses students in the methodologies and best practices essential for effective software development. Encompassing the entire software lifecycle, the course covers requirements analysis, design principles, testing methodologies, and quality assurance. With a focus on cultivating leadership skills in managing the software lifecycle process, students engage in hands-on projects, applying software engineering concepts to real-world scenarios. This experience fosters students' understanding of industry-standard software engineering practices while simultaneously developing effective project leadership capabilities.

### **CS 419 Software Maintenance and Evolution**

**3 credits**

*Prerequisite: CS 313 Requirements Engineering and Communication for Software Development*

This course explores maintaining and versioning software systems throughout their lifecycle, acknowledging the business reality where optimal outcomes are not always guaranteed. Incorporating a forward-looking approach, students assess the implications on business resources and continuity, as well as learn how to adapt when ideal circumstances are not present. Beyond foundational principles, students will learn advanced techniques for code refactoring, version control, software documentation, and the adept management of software upgrades and updates. Students will anticipate, communicate, and adapt to emerging trends that may influence the maintenance and evolution of software systems. By bridging the gap between traditional practices and future technologies, students are prepared to navigate the dynamic landscape of software development, change, and contribute to the longevity and security of software systems.

### **CS 435 Ethical Data Wrangling and Preprocessing**

**3 credits**

*Prerequisite: CS 331 Foundations of Data Science*

This course immerses students in the ethical preparation and refinement of raw data for analysis, addressing both personal and social bias considerations. Students explore techniques for data transformation, handling missing values, and effectively managing outliers. Emphasizing best practices, the course ensures data quality and integrity while underscoring the ethics of responsible and conscientious data handling. Students acquire essential technical skills and develop a deep understanding of the ethical dimensions of data science, preparing them to navigate the evolving landscape of responsible data analysis.

### **CS 437 Predictive Analytics and Time Series Forecasting**

**3 credits**

*Prerequisite: CS 331 Foundations of Data Science*

This course combines the power of predictive analytics with specialized techniques designed for analyzing time-dependent data. Students learn to uncover patterns, trends, and variations within time series datasets, equipping them with the skills to make accurate forecasts. The course offers hands-on experience in applying an array of statistical and machine learning models to predict future outcomes for real-world case studies. The course integrates a forward-looking perspective on the future

of Predictive Analytics, and the evolving landscape of artificial intelligence (AI) in the field. Through a blend of theoretical insights and practical applications, students navigate the intersection of traditional predictive analytics and the transformative impact of AI on forecasting methodologies.

### **CS 439 Big Data Analytics**

**3 credits**

*Prerequisite: CS 331 Foundations of Data Science*

This course explores advanced tools and techniques tailored for large-scale data processing and analysis, surpassing traditional analytics approaches. Students learn to manipulate vast and complex datasets prevalent in dynamic industries such as social media, e-commerce, and healthcare. They will also navigate distributed computing frameworks like Hadoop and Spark and gain proficiency in harnessing the power of visualization to extract meaningful insights from big data. The course empowers students to process, analyze, and visualize massive datasets, equipping them with a holistic understanding of big data analytics. Students engage in the hands-on exploration of innovative solutions for extracting knowledge from the ever-expanding world of big data, ensuring they are well-prepared to meet the challenges of industries driven by data at scale.

### **CS 453 Cloud Networking and Storage Strategies**

**3 credits**

*Prerequisite: CS 350 Network and Cloud Security: Principles and Practices*

This course explores networking concepts and storage solutions tailored for cloud environments, focusing on the interdependencies of nation-states and multinational cloud infrastructures. Students examine the intricacies of virtual networks, load balancing, content delivery networks (CDNs), and advanced cloud storage technologies. Emphasizing the optimization of network performance and the effective management of cloud-based storage resources, the course equips students with practical skills for designing, implementing, and maintaining robust cloud networking and storage infrastructures. It addresses the challenges and opportunities of working in a global system, preparing students to navigate the complexities of cloud networking and storage on a global scale while considering the impact of varying laws and policies on nation-states and multinational cloud interdependencies.

### **CS 455 Virtualization and Containerization**

**3 credits**

*Prerequisite: CS 350 Network and Cloud Security: Principles and Practices*

This course explores virtualization technologies and containerization platforms. Throughout the course, students will explore fundamental concepts such as hypervisors, virtual machines, and container orchestration tools like Docker and Kubernetes. An emphasis is placed on gaining practical skills, through hands-on exercises to manage virtualized and containerized environments effectively. This course explores security considerations and best practices for safeguarding data and applications in these dynamic environments. Students evaluate how emerging trends and innovations in virtualized and containerized environments contribute to societal transformations, addressing ethical considerations and implications, ensuring they are well-prepared to navigate the evolving landscape of these technologies.

### **CS 475 Ethics, Society, and Law in Artificial Intelligence**

**3 credits**

*Prerequisite: CS 371 Machine Learning Foundations: Responsible AI Development*

Students explore the ethical considerations and societal impacts inherent in artificial intelligence (AI) technologies. Beyond the technical aspects, students critically examine the broader implications of AI on individuals and communities. Students engage in topics such as bias and fairness in AI algorithms, transparency, accountability, and the responsible development and deployment of AI systems. Emphasis is placed on understanding the evolving national and global legal landscape of AI technology policy. Additionally, students explore the unintended consequences of AI and why it is necessary to integrate diversity, equity, and inclusion principles into ethical frameworks. By examining the intersection of ethics, technology, and the law, students develop a robust foundation for making informed decisions in the dynamic and evolving field of AI. As future leaders and creators of AI in the 21st century, students gain a unique perspective that shapes their ethical approach to AI development and its impact on society.

### **CS 477 Visionary Machines: Exploring Computer Vision Technologies**

**3 credits**

*Prerequisite: CS 371 Machine Learning Foundations: Responsible AI Development*

This course immerses students in the field of computer vision, where machines learn to interpret real-world visual inputs. Covering foundational principles like image processing and advancing techniques such as feature extraction, object recognition, and image classification, students will build a practical skill set around computer vision. Students will gain expertise in tasks like object detection and image segmentation, applying and analyzing computer vision algorithms. The course addresses the crucial issue of bias in visual recognition. Students explore ethical considerations and societal impacts associated with computer vision applications, emphasizing the importance of implementing guard rails to navigate the responsible use of this technology, particularly in monitoring contexts.

### **CS 479 Responsible AI: Neural Networks and Deep Learning**

**3 credits**

*Prerequisites: CS 371 Machine Learning Foundations: Responsible AI Development, and PSY 340 Psychology of Learning*

This course examines the theory and application of artificial neural networks, with a focus on deep learning architectures. Students explore fundamental concepts such as backpropagation, activation functions, convolutional neural networks (CNNs), and recurrent neural networks (RNNs). Emphasizing ethical considerations and responsible AI practices, the course guides students in understanding the personal and societal impact of neural networks and the importance of ethical decision-making in their application. Through hands-on experiences, students design and train neural networks for various tasks, gaining practical skills essential for navigating the complex landscape of deep learning.

### CS 495 Computer Science Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Computer Science Capstone course offers students a unique opportunity to synthesize and apply the skills, knowledge, and abilities acquired throughout their academic journey in computer science. Engaging in a substantial project, students tackle real-world challenges within their specific area of concentration. By leveraging team feedback groups, students refine their problem-solving and critical thinking skills, master time management techniques, make ethical decisions, implement secure computer science practices, and demonstrate technical expertise to elevate the quality of their individual projects.

### CYS 220 Cloud Computing and Virtualization

3 credits

*Prerequisite: None*

This course explores the key aspects of cloud technology, focusing on the responsibilities of various parties, governance complexities, delivery issues, cybersecurity, and uptime performance. It covers assessing risks associated with utilizing cloud technologies and applying the CIA Triad. Through lab exercises, students gain hands-on experience with cloud technology, simulating real-world business scenarios. This course also begins to prepare students for the CompTIA Cloud Essentials certification.

### CYS 245 Introduction to Cybersecurity

1 credit

*Prerequisite: None*

The course provides students with an introduction to the basic and fundamental concepts of cybersecurity from both a technical and managerial perspective. Students will gain insight on common cyber attacks and the techniques for identifying, detecting and defending against cyber security threats. The course will cover the basics of physical, network and web security as well as standards and laws in cybersecurity. The knowledge gained in this course will provide students with a concrete foundation to further master the concepts of cybersecurity.

### CYS 260 Governance Legal and Compliance

3 credits

*Prerequisite: None*

This course introduces students to the challenges of governance, ethics, legal, and regulatory compliance from the perspective of information security professionals. It covers compliance requirements related to major mandates and laws, including Sarbanes-Oxley, HIPAA, Privacy Act, Gramm-Leach-Bliley Act, Foreign Corrupt Practices Act, and Payment Card Industry Data Security Standards (PCI DSS). Additionally, the course explores the complexities of maintaining compliance and ethical standards in information security. Students learn to navigate these regulations and ethical considerations to ensure effective and responsible information security practices.

### **CYS 345 Cybersecurity Defense in Depth**

**3 credits**

*Prerequisite: None*

This course explores cybersecurity risks and defenses, with an emphasis on major threats to governments and businesses. It begins with a historical overview of cybersecurity, using past lessons to address modern risks and defenses, and forecasts future concerns and necessary protections. Students will engage with real-world scenarios that highlight IT security threats and strategies from both business and government perspectives. The course equips students with the knowledge, skills, and techniques to identify and tackle contemporary cybersecurity threats, and it prepares them for the TestOut Security Pro and CompTIA Security+ certification programs.

### **CYS 350 Cybersecurity Defense in Depth for the Nuclear Industry**

**3 credits**

*Prerequisite: None*

This course focuses on cybersecurity risks and defenses, particularly focused on significant threats to the nuclear industry infrastructure. Starting with a historical overview of cybersecurity, it applies past lessons to current and future threats, equipping students to anticipate and mitigate emerging concerns. The course also examines the evolution of IT security threats and provides insights into specific cybersecurity defenses for the nuclear industry through real-world scenarios that illustrate actual threats and defensive strategies. Students gain the knowledge, skills, and techniques necessary to identify and counteract cybersecurity threats prevalent in the nuclear industry today.

### **CYS 400 Reverse Engineering**

**3 credits**

*Prerequisites: IT 321 Computer Systems Architecture and IT 360 Operating Systems*

This course covers the fundamentals of reverse engineering in cybersecurity, penetration testing, and malware analysis, highlighting its importance in attack strategies and countermeasures. It also addresses intellectual property protections, such as digital rights management, and examines communication protocols using both static and dynamic techniques. Students learn to use a variety of penetration testing tools to detect network vulnerabilities and reverse engineering tools for malware analysis and code decompilation.

### **CYS 401 Organizational Information Security**

**3 credits**

*Prerequisite: None*

This course prepares students to recognize information security threats and develop, plan, and communicate policies and practices to mitigate these risks. It covers responding to Security Information and Event Management (SIEM) incidents from a management perspective and addresses the complexities of communicating information security threats to senior management. Additionally, the course explores the essentials of staffing, training, and leading IT staff to protect network infrastructures and safeguard IT assets. By participating in this course, students gain the skills necessary to effectively manage information security within an organization.

### **CYS 403 Network and Application Security**

**3 credits**

*Prerequisites: IT 250 Business Data Communications and IT 380 Overview of Computer Security*

This course explores the core concepts and models of network and application security, including security models and threats, access control, secure routing and switching, and cryptography for secure communication. Students learn strategies to effectively mitigate security threats. Aligned with industry standards, the course also prepares students for the TestOut Routing and Switching Pro and Cisco CCNA certification programs.

### **CYS 426 Cyber Attacks and Defenses**

**3 credits**

*Prerequisite: IT 380 Overview of Computer Security*

This course introduces students to cybersecurity threats and vulnerabilities, with a focus on software and systems, compliance and assessment, security operations, monitoring, and incident response. It also covers penetration testing, or ethical hacking, as a proactive measure to enhance the security posture of systems and networks. Students learn to assess target systems and networks for vulnerabilities, detect security threats, and recommend and implement defensive, corrective, and preventative measures based on the results of penetration tests.

### **CYS 450 Security Focused Risk Management**

**3 credits**

*Prerequisite: None*

This course provides students with insights, guidance, and best practices in security-focused risk management. Topics include the fundamental principles of security-focused risk management, using a disciplined and standardized approach encompassing risk identification, risk assessment, risk prioritization, and risk prevention or mitigation. By participating in this course, students learn to identify various classes of vulnerabilities, threats, attack vectors, consequences, and mitigation strategies, gaining the knowledge and skills necessary to effectively manage security risks in diverse contexts.

### **CYS 455 Business Continuity**

**3 credits**

*Prerequisites: IT 380 Overview of Computer Security, and IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course provides comprehensive coverage of security topics within the business environment. It explores methods for physical security, as well as measures involving hardware, software, secure and insecure protocols, authentication, and processes to prevent unauthorized access. The course emphasizes developing a business continuity plan and a disaster recovery plan, offering crucial strategies to mitigate the impacts of security breaches or disasters. Students learn to identify and assess business continuity and disaster recovery needs, conduct business impact analyses, secure mission-critical resources, and design effective recovery plans.

### **CYS 456 Securing Mobile and Cloud Computing Environments**

**3 credits**

*Prerequisite: IT 250 Business Data Communications*

This course provides a foundation in cloud computing security, introducing students to common terminology, cloud services, security concerns, and solutions for vulnerabilities associated with cloud-based systems. It covers the objectives of the Certified Cloud Security Professional (CCSP) certification, ensuring students acquire the necessary knowledge, skills, and abilities in cloud security design and implementation. By the end of the course, students can apply security principles effectively within a cloud computing environment and demonstrate competence in cloud security architecture, operations, and service deployments.

### **CYS 465 Cybersecurity Investigation and Case Studies for the Nuclear Industry**

**3 credits**

*Prerequisites: IT 380 Overview of Computer Security and CYS 350 Cybersecurity Defense in Depth for the Nuclear Industry*

This course provides a comprehensive analysis of methods, tools, and best practices for responding to cybersecurity incidents and managing product vulnerabilities in the nuclear industry. Students learn how to form and operate a Computer Security Incident Response Team (CSIRT) and a Product Security Team (PST), emphasizing best practices in conducting cybersecurity investigations. Course content focuses on minimizing potential damage while ensuring proper handling of electronic data collection. Students learn to describe and enhance the incident response process, evaluate regulatory needs, analyze real-world incidents, and create effective incident response plans.

### **CYS 470 Secure Software Development**

**3 credits**

*Prerequisites: IT 380 Overview of Computer Security, and IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course explores the common causes of software security vulnerabilities in applications and databases and examines lifecycle methodologies for secure software development. Key topics include tools and processes for secure software analysis and review, such as threat modeling, abuse cases, penetration testing, security testing, and static analysis tools. Students learn methods for identifying and preventing common software vulnerabilities, including input validation, buffer overflows, cross-site scripting, and SQL injections, as well as develop plans and procedures for implementing secure software development within an organization, gaining the knowledge and skills necessary to enhance software security practices.

### **CYS 475 Large Scale Cybercrime and Terrorism**

**3 credits**

*Prerequisite: None*

This course explores cyber crime and terrorism within a global context, focusing on large-scale incidents that impact international security. It emphasizes the evolution of cyber crime and terrorism, shaped by globalization and the increasing complexity of decentralized, nation-less terror networks. The curriculum examines how cyber crime and information technology have influenced and sustained these modern terror networks. Additionally, students review emerging trends and potential threats,

such as Electromagnetic Pulse (EMP) attacks, and evaluate methods and limitations in confronting large-scale cyber crime and terrorism. This includes advanced data mining techniques employed by the Intelligence Community and the use of Fusion Centers. Students learn to identify and analyze changes in crime and terrorism, understand the role of information technology, and evaluate emerging threats and response methods.

### **CYS 496 Cybersecurity Capstone**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The cybersecurity capstone course explores computer security technologies and principles, emphasizing risk management, access control, authentication, software security, security assessment and testing, and the legal aspects of cybersecurity. Students engage in a final research project that immerses them in real-life cybersecurity scenarios, enhancing their understanding and application of the course material.

### **ECO 260 Introduction to Microeconomics**

**3 credits**

*Prerequisite: None*

Should a manufacturer produce automobiles or ventilators? Should a local government intervene when sugar cane farmers in an area burn stalks to expose cane and the smoke results in a costly rise in asthma treatment among children in a state-run Medicaid program? In this course you will sharpen your ability to understand choices you or others face in a range of personal, professional and public contexts as you are introduced to the framework economists use to compare alternatives faced by individuals, businesses and governments. Governments uniquely make rules. Governments also impose taxes offer incentives and make choices to redistribute wealth, protect, regulate hiring and conditions of work, internet service and air quality. It may surprise you to learn how microeconomic tools introduced in this course can be applied in such diverse contexts to measure and compare relative costs and benefits.

### **ECO 262 Introduction to Macroeconomics**

**3 credits**

*Prerequisite: None*

Do you hear a lot about interest rates? How about negative interest rates? Macroeconomists consider interest rates and other economic variables because interest rates affect activities like hiring and firing of workers (employment) across a whole economy and even worldwide. You might care about interest rates because these affect borrowing costs. Interest rates also affect home and rental pricing and changes in pay on a yearly basis. In this course you will learn how economists measure and forecast economic factors like those mentioned here to assist state, local and federal governments in maintaining services to citizens, price stability and the broadest level of employment possible. You will also learn how powerfully macroeconomic factors affect you directly.

### **EGR 210 Introduction to Engineering Analysis**

**3 credits**

*Prerequisite: MAT 114 Intermediate Algebra; or MAT 120 Precalculus; or MAT 220 Calculus I; or MAT 221 Calculus II*

This course introduces the critical role of engineering analysis across various engineering disciplines. It emphasizes a systematic approach to engineering applications, teaching a general analysis procedure that forms the basis for effective engineering analyses. The curriculum also covers effective analysis and communication tools, such as graphs and statistical analyses. Throughout the course, students employ algebraic (non-calculus-based) methods to analyze mechanics, electrical circuits, thermodynamics, fluid mechanics, and data analysis, including graphing and basic statistics. They develop foundational skills for thorough and accurate engineering analysis, learning methods and processes for utilizing engineering data. Students learn to evaluate engineering situations, define known and unknown variables, establish equation-based approaches, and apply units and unit conversions. This training ensures that students can communicate their findings clearly to both engineering and non-engineering audiences.

### **EGR 280 Introduction to 3-D Modeling**

**3 credits**

*Prerequisite: None*

This introductory engineering graphics course equips students with the skills to create properly dimensioned 2-D sketches and fully dimensioned 3-D parts. Through various projects, students practice creating 3-D models and focus on using and modifying 2-D sketch tools such as line, circle, arcs, rectangle, offset, fillet, chamfer, trim, mirror, move, rotate, copy, scale, stretch, and other commands. They also learn feature commands including extrude, extrude cut, loft, revolve, wrap, helix, swept boss/base (sweep), and hole wizard. Additionally, students build assemblies and produce detailed drawing documentation for manufacturers. The course covers designing mechanical components to master the basics of SOLIDWORKS software. Note, students registering for this course are assessed a course resource fee.

### **EGR 290 Advanced 3-D Modeling**

**3 credits**

*Prerequisite: EGR 280 Introduction to 3-D Modeling*

Building from the previous 3-D modeling course (EGR 280), this course covers the process of designing mechanical components (parts and assemblies) using SOLIDWORKS. This course begins with applications of equations and global variables and progresses towards enhancing students' ability to use SOLIDWORKS common tools and features such as multi-bodies, sheet metal, 3-D sketch, and weldments. Advanced projects challenge students and expand their skills to combine and apply mechanical design principles with computer design techniques and capabilities.

Students registering for this course will be assessed a course resource fee.

## **ELEC 152 Circuit Theory I**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, and MAT 220 Calculus I*

This course provides an introduction to the various principles of electrical circuit analysis. Topics include the study of voltage, current and resistance relationships, energy and power, analysis of circuits in different configurations, theorems for the analysis and simplification of circuits, capacitance, inductance, and transformers. This course contains a lab component.

## **ELEC 153 Circuit Theory II**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, and ELEC 152 Circuit Theory I*

This course will introduce the principles and applications of alternating current circuits. Topics covered include RC and LC transient response, the sine wave, reactance, complex algebra and phasors, impedance, Kirchoff's Law and network theorems (Norton's, Thevenin's, and superposition) in AC circuits, power in AC circuits, series and parallel impedances, impedance networks, filters, and resonance. The topic of engineering and technology standards is also discussed. This course contains a lab component.

## **ELEC 160 Electronics I**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, and ELEC 153 Circuit Theory II*

This course is an introduction to the study of semiconductor devices such as p-n junction diodes, bipolar junction transistors (BJT), field-effect transistors (FETs,) and metal-oxide-semiconductor field-effect transistors (MOSFETs), which enable students to perform analysis of direct current (DC) transistor biasing; small-signal and multi-stage amplifiers using BJTs, FETs, and MOSFETs; and frequency response of single and multi-stage transistor amplifiers. This course contains a lab component.

## **ELEC 161 Electronics II**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, and ELEC 160 Electronics*

This course overviews the analysis and application of advanced electronic circuits. Topics include differential amplifiers, stage gain in decibels, input and output impedances, linear integrated circuit (IC) operational amplifiers, frequency response, Bode plots, active filters, digital-to-analog and analog-to-digital circuits, oscillators, and high frequency amplifiers. The course emphasizes troubleshooting of test circuits and analysis based on computer simulation. This course contains a lab component.

## **ELEC 201 Digital Electronics**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, and ELEC 161 Electronics II*

This course will introduce the principles and applications of digital circuits. Topics include number systems, binary arithmetic, logic gates, Boolean algebra, logic families, combinational and synchronous logic circuit design, logic minimization techniques (Karnaugh maps, Quine-McCluskey algorithm), counters, shift registers, encoders and decoders, multiplexers and demultiplexers, and interfacing. This course contains a lab component.

## **ELEC 202 Microprocessors**

**4 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, and ELEC 201 Digital Electronics; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course presents the principles and applications of microprocessors, including hardware and software, interfacing, assembly language programming, and microprocessor-based systems. It presents 8-, 16-, and 32-bit microprocessor technology and features. This course contains a lab component.

## **ELEC 210 Programmable Logic Controllers**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, ELEC 201 Digital Electronics, and ELEC 202 Microprocessors; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course introduces students to programmable logic controllers (PLCs) and their applications. Topics include PLC architecture, relay logic and ladder logic programming, PLC timers and counters, troubleshooting, process control and networking, and industrial applications. This course contains a lab component.

## **ELEC 306 Advanced Digital Design**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, ELEC 201 Digital Electronics, and ELEC 202 Microprocessors; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course presents systematic design methods for synthesizing sequential digital circuits using hardware description language (HDL), while details of its associated languages too are brought to familiar ground. Specification, modeling, and design principles of sequential systems, as well as design implementation and testing using programmable logic devices and Computer Aided Design (CAD) tools are studied. The course includes laboratory experiments and a group project.

### **ELEC 307 Microcontrollers**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, ELEC 201 Digital Electronics, ELEC 202 Microprocessors, and ELEC 210 Programmable Logic Controllers; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course builds on the student's background from first courses in logic design and microprocessors. This course discusses the architecture used in the design of PIC microcontroller-based systems, followed by assembly language programming, interfacing, and communications. Interrupts, timers, data converters, and embedded systems design are also covered. The course includes laboratory experiments and a group project.

### **ELEC 321 Control Systems**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, ELEC 201 Digital Electronics, and ELEC 202 Microprocessors; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This is an introductory course on continuous linear control systems covering analysis, design, and practical applications. Modeling first and second-order dynamic physical systems with feedback control, transient response and steady-state analyses, Routh-Hurwitz stability criteria, roles of feedback in controlling steady-state errors, frequency response design methods (Bode, Nyquist), etc. are covered. The course emphasizes the application of established methodology with the aid of examples, calculators, and computer programs such as MATLAB.

### **ELEC 331 Digital and Analog Communications**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, and ELEC 201 Digital Electronics; IT 211 Fundamentals of Programming, or IT 313 Intermediate Programming*

This is a technology focused course covering the principles and applications of analog and digital communication circuits. Analysis of amplitude, frequency, and phase modulation and demodulation, transmitters and receivers, digital communication techniques, coding and multiplexing, network communications and protocols, transmission lines and media, wave propagation and television, optical fibers, wired and wireless communications, communication test equipment and troubleshooting, and communication standards are covered. This course contains a lab component.

### **ELEC 345 Electric Machines**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, and ELEC 153 Circuit Theory II*

This course covers the principles and applications of direct current (DC) motors and generators, ideal transformers and three-phase transformers, three-phase induction machines, equivalent circuit of the induction motor, synchronous generators and motors, and motor speed control.

### **ELEC 350 Power Electronics**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, and ELEC 201 Digital Electronics*

In this course you will learn about various circuit techniques used in power electronics. Topics include: Characteristics of power transistors and diodes, switching-mode DC-DC converters, including buck and boost converters and regulation of DC-DC converters by PWM, rectification using diodes, power factor correction, switch-mode DC power supplies, DC-AC inverters, and applications of power electronics in motor drives, UPS, and power systems.

### **ELEC 360 Generation and Transmission of Electric Power**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, ELEC 201 Digital Electronics, and ELEC 202 Microprocessors*

This course includes comparing the technologies of power generation from hydro, thermal, nuclear, and wind energy sources; introducing transmission line theory-based analysis of power distribution line and its equivalent circuits; applying components in power distribution systems including substations, protection, and low voltage distribution; and calculating the cost of electricity. The course also includes an introduction to direct current transmission and optimal power-flow analysis, as well as an assessment of solid-state controllers for power flow and harmonics. Finally, the course includes a software-based project wherein students have the opportunity to incorporate project management techniques. This course contains a lab component.

### **ELEC 370 Instrumentation and Data Acquisition**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Lab, MAT 220 Calculus, ELEC 152 Circuit Theory I, ELEC 153 Circuit Theory II, ELEC 160 Electronics I, ELEC 161 Electronics II, and ELEC 201 Digital Electronics; IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course provides an introduction to virtual instrumentation and data acquisition. Topics covered include virtual instruments, sub virtual instruments, editing and debugging, structures, arrays and clusters, graphs and charts, data acquisition, and analysis. Power electronics design and engineering standards are also dealt with. This course contains a lab component.

Students registering for this course will be assessed a course resource fee.

### **ELEC 495 Integrated Technology Assessment BEL**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This is the required capstone course for the B.S. Electrical Engineering Technology program. It requires reflections on the student's past academic and professional experiences and using the information gained from this reflective exercise to develop evidence-based learning statements related to the Electrical Engineering Technology degree outcomes, resulting in the integrated technology assessment (ITA) portfolio.

The course features an online examination designed to assess the basic knowledge and understanding achieved in electrical engineering technology. This examination is administered in Module 2 through Module 7.

Finally, the student is required to undertake a hardware based capstone project spread through all the course modules, and demonstrate integrated learning experience and the outcomes of this degree program.

### **ENG 101 English Composition**

**3 credits**

*Prerequisite: None*

This class provides students with foundational knowledge and skills to prepare them for academic and professional writing. By analyzing the work of other writers, students will learn to approach writing from a rhetorical and genre-based perspective. They will practice sentence- and paragraph-level writing, learning to revise and correct their own work. They will also work on finding, documenting, and effectively integrating sources into a research-based essay. Both traditional (textual) and multimodal (textual and visual) composition will be addressed.

### **ENG 101A Advanced Composition**

**3 credits**

*Prerequisite: None*

This class provides students with foundational knowledge and skills to prepare them for academic and professional writing. By analyzing the work of other writers, students will learn to approach writing from a rhetorical and genre-based perspective. They will practice sentence- and paragraph-level writing, learning to revise and correct their own work. They will also work on finding, documenting, and effectively integrating sources into a research-based essay. Both traditional (textual) and multimodal (textual and visual) composition will be addressed. This is an accelerated class designed for students with significant previous academic writing experience. Less experienced students are encouraged to take the 15-week ENG 101.

## **ENG 101ELL College Composition for English Language Learners**

**3 credits**

*Prerequisite: None*

This section of college composition is tailored to the special needs of English language learners. It will cover sentence-level writing (grammar, mechanics, and style), paragraph writing, and writing in a variety of essay formats, culminating in a persuasive research-based essay. Students will practice important skills such as developing a research question, conducting library research, developing a thesis, and appropriately integrating sources.

## **ENG 102 Composition II**

**3 credits**

*Prerequisites: ENG 101 Composition I, ENG 101A Composition I, or equivalent (required)*

This course is designed to help you improve your academic and workplace writing skills. The course emphasizes research-based, argument-driven writing. You will complete a research paper, a workplace proposal, and an oral presentation related to your academic discipline or profession. You will practice finding, evaluating, and citing sources; paraphrasing and summarizing; outlining and paragraphing; and revising and proofreading.

## **ENG 102A Advanced Composition II**

**3 credits**

*Prerequisites: ENG 101 Composition I, ENG 101A Composition I, or equivalent (required)*

This course is designed to help you improve your academic and workplace writing skills. The course emphasizes research-based, argument-driven writing. You will complete a research paper, a workplace proposal, and an oral presentation related to your academic discipline or profession. You will practice finding, evaluating, and citing sources; paraphrasing and summarizing; outlining and paragraphing; and revising and proofreading.

## **ENG 202 Business Writing**

**3 credits**

*Prerequisite: ENG 101 English Composition or equivalent*

Business Writing assists students in becoming confident, efficient business communicators. Students learn and apply strategies for designing and delivering effective workplace messages, both written and oral, that address audiences, purposes, and common business situations and problems. Using scenario- and case-based assignments, students analyze audience needs, define outcomes for their communication, and plan strategies for successfully achieving those outcomes. The course covers digital and routine communication forms, including reports, proposals, and presentations. Business Writing equips students with a range of tools to navigate today's business world successfully.

## **ENG 312 Scientific and Technical Writing**

**3 credits**

*Prerequisite: ENG 101 English Composition or equivalent*

Scientific and Technical Writing focuses on the development and application of rhetorical strategies used in writing about science and technology. You will work on communication projects in your chosen scientific/technical communication fields; analyze writing situations and develop strategies

for addressing audiences, organizing information, using appropriate style, and presenting the work using effective document design for both technical and non-technical readers; and produce writing designed to make even “hard” science and technology accessible. Let’s get started!

### **GEOL 108 Earth Science and Society**

**3 credits**

*Prerequisite: None*

The three threads of this course are Earth, as represented by the four natural spheres—atmosphere, biosphere, hydrosphere, and lithosphere; Society, as represented through the effects of Earth processes on humans and society and the effects of the human existence on the physical nature of the Earth; and Technology, which has greatly expanded in geoscience research. These threads are tied together by our semester-long project that enables you to relate your studies directly to your community. Everyone will select a study area—your hometown, your current location, or another area with which you are familiar—and conduct a mini-Natural Resources Inventory of the area as related to each of the four natural spheres assessing the quality of the air and water, the land cover, and geologic hazards.

This course requires the use of Microsoft Excel.

### **GEOL 114 Introduction to Oceanography**

**3 credits**

*Suggested Prerequisite: Basic Algebra*

This course introduces oceanography as an integrated science that utilizes many basic sciences to understand the ocean that dominates the surface of our planet. During the course we’ll explore the global ocean/atmosphere system as well as waves, tides, and currents of the world ocean with a focus on understanding its impact on our lives. Our studies will span the globe to give you an up-close view of some of the most significant challenges facing our marine ecosystem including climate change, pollution, and other human activities. We’ll also explore the adaptations of marine animals and other inhabitants of the ocean in the face of such challenges.

### **HEM 125 Introduction to Homeland Security**

**3 credits**

*Prerequisite: None*

This course provides an overview of the discipline of homeland security and emergency management. Since the September 11th terrorist attacks, homeland security and emergency management have evolved in response to the changing threat landscape. This course will address the all-hazards approach to homeland security and the numerous components that encompass this vast and ever-changing field. Topics covered include: the need to balance terrorism threats, natural disasters, and other hazards; the critical role of crisis communications and social media; intelligence and counterterrorism, border security and immigration; and transportation safety and security. Particular attention is paid to emerging threats to cybersecurity and the sixteen critical infrastructure sectors. Finally, the principles of all-hazards risk management including mitigation, preparedness, response,

and recovery will be covered throughout the course in support of the larger roles and structures of the homeland security enterprise. As you begin your Homeland Security and Emergency Management degree, you engage with the most important threats and governing responses, embarking upon your continuous professional development within the homeland security and emergency management community.

---

### **HEM 350 International Terrorism**

**3 credits**

*Prerequisite: None*

This course provides an examination of the historical, political, social, religious contexts, and modern manifestations of international terrorism and terrorist organizations. Terrorism originating in the Middle East, Europe, Asia, and Latin American will be included.

---

### **HEM 352 Domestic Terrorism**

**3 credits**

*Prerequisite: None*

This course introduces students to terrorism originating in the United States. Homegrown terrorism and its unique characteristics will be studied, as well as the foundations of domestic terrorism, with an examination of its history and philosophies. Topics include current and active domestic terrorist groups, their organizational structure, philosophies, and networks. Students will study the causes and dynamics of different types of domestic terrorism, along with the strategies used combating this phenomenon.

---

### **HEM 356 Emergency Management**

**3 credits**

*Prerequisite: None*

This course covers the organization and management of the various aspects of emergencies due to natural disasters, man-made disasters, terrorism, or war. Reactive procedures covered will include response, mitigation and recovery efforts. Proactive measures will include the preparedness and training of both government entities and private citizens.

---

### **HEM 450 Counterterrorism**

**3 credits**

*Prerequisite: None*

This course introduces the principles and approaches to countering terrorism in the United States and abroad. Students will examine the question of jurisdiction and activities associated with counterterrorism; whether they should be primarily law enforcement-oriented or military-oriented. The legal and ethical concerns and the restrictive rules of collecting intelligence by military and other non-law enforcement organizations are analyzed.

## HEM 460 Infrastructure Security and Policy

3 credits

*Prerequisite: None*

This course deals with the various methods and techniques that have been developed to protect society's critical infrastructure, as well as their influence on policy and decision-making. It covers the historical background of critical infrastructure and its importance; exploring current trends in infrastructure sensitivity and the impact on a networked environment. The course embraces an all-hazards approach to homeland security, critical infrastructure protection and assurance, and emergency management. The course will examine the National Response Framework (NRF) and how it can be applied locally; public-private partnerships; information sharing; the need for resiliency planning to respond to changes within the threat environment; risk assessments; and new, related regulations.

## HEM 498 Homeland Security and Emergency Management Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Homeland Security and Emergency Management capstone is intended as the last course in the major. Throughout the term, students will discuss various topics in regards to the homeland security enterprise and emergency management; including preparation, mitigation and recovery from man made, natural and accidental disasters. Students will also research and submit application papers, the topics of which will reflect the integrated components of homeland security and emergency management. This course is designed to allow students the opportunity to demonstrate their abilities to understand, analyze, synthesize and present the content, concepts, policies and theories in the field.

## HIS 101 United States History I

3 credits

*Prerequisite: None*

This course is an introductory survey of US history from pre-European contact through the end of Reconstruction in 1877. Students will examine the major political, social, and economic trends in the American colonies and new nation, with a particular focus on diversity and cross-cultural encounters. Students will learn to think like a historian by contextualizing the past through a research project about a major trial in early American history, applying historical information to our contemporary world, and reading and interpreting primary sources.

This course uses a lower-cost interactive webtext instead of a traditional textbook.

## HIS 102 United States History II

3 credits

*Prerequisite: None*

This course is an introductory survey of US history from the end of Reconstruction in 1877 through the recent past. The course examines the evolution of the United States from a nation torn apart by war to a global superpower. Students will study major political, social, and economic trends in the modern United States, with a particular focus on diversity and cross-cultural encounters. Students will engage in primary and secondary source analysis and learn to communicate historical arguments using a variety of tools.

This course uses a lower-cost interactive webtext instead of a traditional textbook.

## HIS 120 World History I

3 credits

*Prerequisite: None*

This course examines the rise of the major world civilizations in Asia, Africa, Europe, and the Americas from their earliest beginnings through to the early modern era. It focuses on economic, social, political, and cultural factors that contributed to their birth and sustained their growth and development. Students will explore the political institutions, social systems, gender roles, religious systems, and cultures of these civilizations. They will also look at the contributions of individual men and women to their communities. In particular, the course highlights the interconnectedness of many societies as they passed ideas, technologies, people, and goods back and forth to each other.

## HIS 335 United States Civil War

3 credits

*Prerequisite: None*

The Lincoln presidency. Antietam. The Emancipation Proclamation. Gettysburg. Draft Riots. Sherman's March. Appomattox. The Civil War was a pivotal turning point in American history and its legacies are still with us today. From its antecedents in Antebellum America to its legacies in the Reconstruction era through today, this course will investigate the causes and consequences of the war. The course will cover the major battles and the military and political circumstances that led to the Union's victory and Confederacy's defeat. It also covers the social, cultural, and economic histories of the war and its impact on the people who lived through it on the battlefields and the home front.

## HIS 350 World War I

3 credits

*Prerequisite: None*

Known colloquially as the "Great War" and the "War to End All Wars," World War I was a watershed event in the twentieth-century. Borne out of imperial rivalries and complex European alliances, the war erupted suddenly in 1914 and ended more than four years later, at the eleventh hour of the eleventh day of the eleventh month. In the years between, the Allied and Central Powers engaged in a horrific and devastating "Total War," drafting unprecedentedly large armies and transforming their economies to support the war effort, yet producing little more than stalemate and death on much of the Western Front. The Great War changed how wars were fought and introduced new technology to the battlefield. Students in this

course will examine the origins and consequences of the war, the major strategic decisions, as well as the intertwining history on the homefront of the combatant nations. Students will engage with the historical material through innovative games and simulations which are designed to allow students to experience the war's major decision points and strategy as if they were really there. Along with the simulations, students will read primary source accounts of the war to understand the war's significance, its toll on the "Lost Generation," and its ramifications today as we commemorate the war's one-hundredth anniversary.

This course includes gaming technology that requires students to have a web browser that meets the minimum Excelsior system requirements.

The course uses no-cost open educational resources in place of a textbook.

### **HSC 112 Medical Terminology**

**3 credits**

*Prerequisite: None*

This course will prepare you for accurate oral and written use of medical language in a variety of health care settings and from multiple practitioner perspectives. You will gain a practical understanding of medical terminology that includes basic elements and word structure, body references, and specific vocabulary of the human biological systems. You will learn to interpret medical language into common terms and the proper language structure when using medical terms.

### **HSC 121 Health Care in the United States**

**3 credits**

*Prerequisite: None*

This course provides the students with opportunities to explore the structure and function of the United States (US) health care delivery system. Students will learn about health care finance, settings for care, modes of delivery, the role of technology, and key trends in health care.

### **HSC 124 Professionalism in Health Care**

**3 credits**

*Prerequisite: None*

This course provides students with an opportunity to explore multiple aspects of professionalism in the health care occupations. Topics covered include cultural competence, legal and ethical issues, effective communication, interdisciplinary teams, and professional competence.

### **HSC 292 Associate in Health Sciences Capstone**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course will assess the knowledge students gained throughout the curriculum of the Associate's in Health Science degree program. Students will have the opportunity to demonstrate their understanding of the health care delivery system as it relates to specific health care professions. Students

will also exercise and refine their professional skills through activities such as resume writing and responding to interview questions. Students will apply effective critical thinking and communication skills throughout the course.

---

### **HSC 302 Principles of Health Care Management**

**3 credits**

*Prerequisite: None*

This course provides you with critical knowledge to fulfill the role of health care manager. In this course you will be introduced to US law, governing bodies, and regulatory controls that set standards for healthcare and challenge health care managers when addressing legal, financial, ethical, and quality control issues. You will investigate current trends and critical issues that have emerged in the 21st century, and you will explore ways in which health care managers can respond to these changes. You will learn about opportunities as well as challenges present in today's health care environment that are important to health care managers when managing conflict and making decisions within a health care organization.

---

### **HSC 305 Critical Issues in Health Care Management**

**3 credits**

*Prerequisite: None*

This course provides you with an overview of current issues that influence the delivery of health care. During this course, you will investigate current trends and critical issues that have emerged in the early 21st century and will explore ways in which health care managers can respond to these changes. You will learn about opportunities as well as challenges present in today's health care environment that are important to health care managers.

---

### **HSC 310 Writing and Communication in the Health Science Professions**

**3 credits**

*Prerequisite: None*

Effective communication skills are vital in the health professions. Taking this course early in a degree program provides essential preparation for academic work. A broad range of topics are explored including communication styles, cultural awareness, communication through social media, writing as a process, and effective professional presentations. The essential skill of writing to persuade, while communicating important health practices, is practiced preparing for communicating with clients and the public. This is a writing-enriched (WE) course.

---

### **HSC 312 Ethics of Health Care**

**3 credits**

*Prerequisite: None*

This interdisciplinary course guides students through a systematic analysis of contemporary ethical issues in health care and human services. Students will use ethical theories, principles, and codes to develop ethical decision-making processes for addressing difficult ethical dilemmas that are often encountered by professionals in human services and healthcare fields. As legal policies and historical considerations often underpin ethical issues, students will become conversant in pertinent policies to better understand the complexities of the ethical issues encountered by professionals.

### **HSC 320 Health Care Issues in Culturally Diverse Populations**

**3 credits**

---

*Prerequisite: None*

This course introduces students to the concepts of culture and cultural diversity as they relate to health, illness, and the health care delivery system. There are many types of diversity, including but not limited to religious, racial, ethnic, gender identity, sexual orientation, socioeconomic, disability, regional, and others that exist in our global society. We will examine the roles that belief systems, values, and health practices play in people's interactions with health providers. Common myths and assumptions will be explored. We will also investigate strategies that health professionals can implement to create more inclusive services.

### **HSC 330 Legal and Regulatory Environment of Health Care**

**3 credits**

---

*Prerequisite: None*

In this course you will be introduced to U.S. law and the legal process in healthcare. You will acquire a foundation for understanding the scope, limits and consequences of legal obligations. You will also learn about the governing bodies and regulatory controls which set standards for healthcare, and you will apply your knowledge in identification of legal issues often encountered in health administration.

### **HSC 375 Health and Wellness**

**3 credits**

---

*Prerequisite: None*

This course focuses on the latest trends in health, nutrition, physical activity, and wellness. From stress management and sleep to overall well-being, we will explore personal health, health related attitudes and beliefs, and individual health behaviors.

### **HSC 402 Managing Stress**

**3 credits**

---

*Prerequisite: None*

This course focuses on the nature of stress and the connection between mind, body and spirit. Students will study the different theoretical models of stress from a variety of theorists while exploring coping strategies and relaxation techniques for healthy living in today's changing world. Students will also create an individualized stress management program plan.

### **HSC 403 Nutrition for Wellness**

**3 credits**

---

*Prerequisite: None*

This course uses several short game-based learning activities to learn decision-making about nutrition based on environmental circumstances and health conditions. Students learn how nutrition relates to health, wellness, and disease prevention. Students develop personalized nutrition plans and gain an understanding of the impact of nutrition at all stages of life. Students will gain knowledge on how to separate fact from fiction. Food safety and innovations in food technology will be examined.

### **HSC 414 Budget and Finance in Health Care Organizations**

**3 credits**

*Prerequisite: None*

This course guides students through an examination of financial principles and techniques used by managers in health care facilities. Budget preparation and management, and analysis in the context of the evolving health care environment are the focus of this course.

### **HSC 432 Introduction to the Health Care Delivery System**

**3 credits**

*Prerequisite: None*

This course provides a comprehensive overview of the U.S. health care delivery system and the forces that influence it. Students will examine the continuum of health care delivery from prevention through individualized clinical health care, including the importance of interprofessional collaboration. Students will explore historical influences on today's U.S. health care delivery system and will have the opportunity to investigate the roles of government, finance, regulators, and providers in the health and public health arenas. The inter-connectedness of the U.S. health care delivery system with global health care systems will be explored.

This course duplicates HSC 431/NUR 431. Credit for only one of these courses will be applied toward graduation.

### **HSC 445 Introduction to Health Care Informatics**

**3 credits**

*Prerequisite: None*

This multidisciplinary course introduces students to the role of information management in health care. Students will explore benefits, issues, risks and challenges related to the electronic health record and other information systems in the health care environment. Students will also explore the field of consumer informatics and its use in providing health related information to health consumers. The course will address the role of the health provider in working with computers and information management systems in health care.

### **HSC 450 Economics of Health Care**

**3 credits**

*Prerequisite: None*

This course introduces you to the field of healthcare economics. During the course, you will learn the concepts and principles of microeconomics as they apply to healthcare. You will explore why and how healthcare differs from other markets. Topics to be covered include the cost of health care, funding of health care, and government regulation. In addition, there is a focus on behavioral economics and emerging trends in multiple health care settings.

### HSC 464 Health Sciences Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This end-of-program capstone course of the Bachelor of Science in Health Sciences curriculum requires students to demonstrate mastery in previously learned knowledge, principles, and skills to analyze case-based problems common in the health field and propose evidence-based solutions. This is an exciting opportunity to challenge yourself in the role of an expert as you address a real-world situation. You will also have opportunities to interact with other class members, not only as students but as soon-to-be-graduating professional colleagues, as you discuss and compare your perspectives on health issues. The capstone will also provide you with a place to consider your next steps as a bachelor's-level graduate.

### HSC 470 Healthcare Management Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This end-of-program capstone course of the BS in Health Care Management curriculum requires students to demonstrate previously learned knowledge, principles, and skills to analyze health science-based case problems. Using a variety of case analysis tools, students will analyze cases both as a member of a team and individually and will discuss case studies that examine the professional role in health care. This course provides students with an opportunity to demonstrate their ability to integrate and apply knowledge of the arts and sciences, business functions, and health care management principles and concepts.

### HUM 253 Mythology

3 credits

*Prerequisite: None*

In this course, students will study mythology while drawing on mythological themes and patterns to understand the nature of their own “hero’s journey.” They will examine a variety of classical, contemporary, and diverse cultural mythologies, ranging from Marvel’s Avengers to the Epic of Gilgamesh, from Star Wars to the Odyssey.

The only required text for this course is an eBook that is available through the Excelsior library.

## HUM 300 Ethics

3 credits

*Prerequisite: None*

Why doesn't Batman kill the Joker? Is Spider-Man right that with great power comes great responsibility? In this course, you can easily explore a variety of approaches to ethics by examining moral issues through superheroes and their world-shaking struggles.

The course uses superheroes to investigate enduring human questions and controversial issues to deepen your engagement with the ethical dimensions of our world. Your foundation includes traditional ethical theories such as relativism, utilitarianism, and virtue ethics and, also, the more current feminist, postmodern, and global ethical theories. Ethics influences all our relationships, shapes our decisions at work, and deeply infuses our culture. Superheroes can help us see how even the smallest decisions can have far-reaching consequences.

If you are a military student, this course may help you apply ethical concepts to civilian contexts.

Most of the required books and articles are accessible through the Excelsior library and in the course.

## HUM 306 Creative Problem Solving

3 credits

*Prerequisite: None*

Given the rapid changes in today's economy and workplace, creativity and innovation continue to be important skills that support career growth. Because employers continuously rate the ability to solve problems as an essential skill, this course is designed to introduce and strengthen a student's ability to move through logical problem-solving processes in order to creatively find solutions to problems that are personally or professionally relevant to them. Neuroscience research affirms that all people possess the same mental capacities as people with highly inventive minds, so students will study innovators and global thinkers who will show them the crucial techniques to increase their competency, sharpen their skills, and develop their innovative mindset.

## HUM 307 Critical Thinking

3 credits

*Prerequisite: None*

In this class, students will learn how to effectively solve personal and professional problems and achieve goals by honing their critical thinking skills and practices. From tackling real world situations and case studies, to evaluating arguments from a range of perspectives, they will have the opportunity to skillfully articulate positions, drawing from their own experiences and applying the concepts developed in this class.

## HUM 321 I Feel Your Pain: Illness and Empathy in the Arts

3 credits

*Prerequisite: None*

This course explores what happens when people become ill and how their experience of the care they receive from medical practitioners can affect and change their lives, for better or for worse. We look at current Western practices surrounding end-of-life care, the processing and acknowledgment of grief, and the tendency to deny our very mortality. We witness what people in stigmatized groups undergo when they seek medical treatment. And we confront what happens when a person, either ill or well, decides to end their life on their own terms. Throughout all of these explorations, we examine why empathy is crucial to both giving and receiving good care and how exposing ourselves to the arts can help foster empathy skills in those of us who live with, care for, and support the ill and dying.

This course was cross-listed with NUR 321. Credit for only one of these courses will be applied toward graduation.

## IND 101 Cornerstone A: Foundations

3 credits

*Prerequisite: None*

The future: the only constant is change. The only certainty is uncertainty. So how do you prepare today for what might come tomorrow? In this introductory, interdisciplinary course unique to Excelsior University, students explore foundational skills and mindsets such as grit and self-regulated learning to help them navigate the uncertainty and change of our future societies and workplaces. In this first-course experience, students investigate, reflect, and plan for their future academic and career journeys. In researching the major problems of our future world, student learn to challenge their prior assumptions, keep an open mind, and build their research, writing, critical thinking, argumentative reasoning skills.

This course must be completed with a grade of C or higher. Registration in this course is restricted to incoming students with fewer than 60 transfer credits. This course duplicates IND 301 and CCS 120. Credit for only one of these courses will be applied toward graduation.

The Cornerstone cannot be completed in the same term as a Capstone course.

## IND 203 Introduction to Professional Ethics

3 credits

*Prerequisite: None*

In this interdisciplinary course, students will develop the analytical skills necessary to examine ethical issues in the workplace. Students explore conventional ethical theories and principles, develop ethical decision-making, and resolve common dilemmas. Students discuss the multiple challenges faced by professionals and identify ethical practices or codes that apply to each of their own professions.

The only required text for this course is an eBook that is available through the Excelsior library.

## IND 301 Cornerstone B: Pathways

3 credits

*Prerequisite: None*

The future: the only constant is change. The only certainty is uncertainty. So how do you prepare today for what might come tomorrow? In this upper-level, interdisciplinary course unique to Excelsior University, students hone critical skills and mindsets such as grit, self-regulated learning, metacognition, and intellectual curiosity to help them navigate the uncertainty and change of our future societies and workplaces. In this first-course experience, students investigate, reflect, and plan for their future academic and career journeys. In researching and posing solutions for the major problems of our future world, students hone their ability to challenge their prior assumptions, keep an open mind, and strengthen their research, writing, critical thinking, argumentative reasoning skills.

This course must be completed with a grade of C or higher. Registration in this course is restricted to incoming students with 60 or more transfer credits. This course duplicates IND 101 and CCS 120. Credit for only one of these courses will be applied toward graduation.

The Cornerstone cannot be completed in the same term as the Capstone course.

## INL 102 Information Literacy

1 credit

*Prerequisite: None*

Information literacy is the ability to find, evaluate, interpret, and use information legally, ethically, and effectively. This course provides a broad overview of information literacy concepts, including the differences between academic and popular research methods, finding and evaluating sources, reading sources critically, writing with sources, and safely navigating information networks such as the internet. Students must complete information literacy within their first 13 credits at Excelsior.

## INT 401 Professional Experience

3 credits

*Prerequisites: None; however, it is recommended that this course be taken toward the end of the student's program of study.*

This course explores characteristics and benefits of Problem Based Learning using a provided problem in the student's respective field of study. Students will work toward resolving an open-ended problem rather than one with a defined solution. Application of previous coursework in addition to critical thinking and analysis will be used in solving the problem, and you will receive guidance from your instructor throughout the course. The course offers opportunities to apply the Problem-Based Learning concepts with action planning exercises. The assessment module demonstrates strategies for assessing students' life readiness skills throughout an open-ended project. Students will also work on self-branding throughout the course in order to better assess their strengths and areas of interest in applying previous experience and to aid in career planning.

## **IT 200 Hardware and Software Essentials**

**3 credits**

---

*Prerequisite: None*

This course immerses students in the fundamental skills needed for computer technology, covering essential topics such as computer hardware (including mobile devices), operating systems, basic networking, and security. Students explore the roles and practices of a PC technician and examine current information technology trends. By the end of this course, students are proficient in configuring operating systems and networks, identifying and addressing security issues, and troubleshooting hardware and software. This preparation aligns with the exam objectives of the CompTIA A+ certification program, paving the way for an entry-level PC technician career.

## **IT 210 Object-Oriented Programming**

**3 credits**

---

*Prerequisite: None*

This course will cover problem-solving and algorithm development using the Java programming language. Fundamentals of good programming style, process design, coding, debugging and documentation will be covered. Students will be introduced to object-oriented programming features including encapsulation, inheritance, and polymorphism.

## **IT 211 Fundamentals of Programming**

**3 credits**

---

*Prerequisite: None*

This course introduces students to basic programming concepts using the Python language. Topics include variables, Boolean logic, loops, user input handling, output display and file operations, lists, strings, object-oriented programming, inheritance, recursion, and Graphic User Interface (GUI) programming. Throughout the course, students engage in multiple debugging exercises to hone their problem-solving skills. By the end of this course, students are equipped to apply these concepts to develop executable programs that address real-world needs.

## **IT 221 Introduction to Computers**

**3 credits**

---

*Prerequisite: None*

This course equips students with fundamental knowledge of computer systems and their components, covering computer hardware and architecture, application software, operating systems, networks, and the Internet. It also introduces advanced topics such as information privacy and security, databases and data warehouses, data mining, and legal, ethical, and privacy issues in the information technology field. Additionally, students engage in learning activities to develop skills needed to work with the Microsoft Office suite. By participating in this course, students gain a comprehensive understanding of computer systems and advanced IT topics.

## IT 250 Business Data Communications

3 credits

*Prerequisite: None*

This course offers an in-depth overview and practical application of data communications and networking concepts within a business environment. It covers key topics such as data communication models, protocols, standards, and services; networking technologies and communication media; network topology, design, and architecture; network management; wireless technologies; network security; and cryptography. Through hands-on labs and assignments based on real-world business scenarios, students apply their knowledge and skills effectively.

This course prepares students for the CompTIA Network+ certification exam..

## IT 313 Intermediate Programming

3 credits

*Prerequisites: None*

This intermediate programming course focuses on problem-solving and algorithm development using Java, a widely used language in object-oriented programming. Students learn to code proficiently and debug programs and applications in Java, skills essential in the IT industry. This course prepares students to meet common expectations in software development roles by analyzing problems and applying coding solutions.

## IT 321 Computer Systems Architecture

3 credits

*Prerequisites: IT 211 Fundamentals of Programming or IT 313 Intermediate Programming*

This course is an introduction to the basic components and structure of the computer. The course covers, in detail, basic Boolean algebra, fundamentals of computer design, instruction set principles, RISC/CISC processors, instruction and processor-level parallelism, memory hierarchy, pipelining, assembly language, and parallel computer architectures. The course will also address the architecture and microprogramming of the processor.

## IT 360 Operating Systems

3 credits

*Prerequisite: None*

This course provides an introduction to the basic components and structure of a generic operating system. It highlights critical aspects such as processes, process management, and synchronization, along with threads, interrupts, and interrupt handling. Additional topics include memory management, virtual memory management, resource allocation, and an introduction to file systems, protection, and security. Students learn to explain the functions and features of operating systems, differentiate processing methods, and analyze the need for security and protection in OS design. By the end of the course, students are equipped with the foundational knowledge necessary to understand and work with operating systems.

### **IT 370 Database Management Systems**

**3 credits**

---

*Prerequisite: None*

This course examines the technology and impact of the design of database systems on the organization. It covers the application, design, and implementation of database systems. Topics include an introduction to basic database concepts, database design principles including Entity-Relationship (E-R) diagrams and database normalization, SQL queries, transaction management, distributed databases, data warehousing, and database administration. The course focuses on the relational model.

### **IT 371 Web Design and Development**

**3 credits**

---

*Prerequisite: None*

This course will provide practical instruction on the design, creation, and maintenance of web pages. The course will cover the fundamental principles of web programming and formatting. This will include learning the difference between client-side and server-side scripting technologies, effective use of web authoring tools, and code development. The course will also cover web design standards and the need for integrating human-computer interaction principles in web design. The final project in the course will enable learners to apply current development and production practices to design web pages.

### **IT 375 Human Computer Interactive Design**

**3 credits**

---

*Prerequisite: IT 371 Web Design and Development*

The course starts with fundamental concepts related to human behavior through the lens of HCI (human-computer interaction), human-centered design, user experience (UX) and user interface (UI). These concepts are applied experientially throughout the 8 modules of the course. Research design, persona development, information architecture, low and high fidelity prototyping using wireframing are all used to develop a minimally viable product (MVP) using HTML and CSS. The course long project is the culmination of material covered throughout the course and can be used as a portfolio item to showcase classwork for an interview or other employment situation.

### **IT 380 Overview of Computer Security**

**3 credits**

---

*Prerequisite: None*

This course teaches essential terms and concepts fundamental to understanding cybersecurity at an introductory level. Course topics include Security Principles, Business Continuity, Disaster Recovery & Incident Response Concepts, Access Controls Concepts, Network Security, and Security Operations. Students learn to recognize ethical concerns in cybersecurity, assess the impact of cybersecurity on global society, and evaluate the pros and cons of AI and other emerging technologies. By participating in this course, students gain the knowledge and skills necessary to pursue the (ISC)<sup>2</sup> Certified in Cybersecurity (CC) credential.

### **IT 390 Project Management**

**3 credits**

*Prerequisite: None*

This course explores the system development life cycle (SDLC) and project life cycle, enhancing skills in budget and timeline management. Students use project management software to design project schedules, employing tools such as bar charts, PERT (Program Evaluation and Review Technique), and the critical path method to effectively manage and optimize project execution. They learn and demonstrate essential project management concepts, develop comprehensive project plans, manage project scope and resources, and execute risk management strategies.

### **IT 406 Computer Forensics**

**3 credits**

*Prerequisite: IT 380 Overview of Computer Security*

This course explores the system development life cycle (SDLC) and project life cycle, enhancing skills in budget and timeline management. Students use project management software to design project schedules, employing tools such as bar charts, PERT (Program Evaluation and Review Technique), and the critical path method to effectively manage and optimize project execution. Students learn to describe essential project management concepts, develop comprehensive project plans, manage project scope and resources, and execute risk management strategies. Additionally, students identify and apply the phases and techniques related to cyber investigations and digital forensics.

### **IT 422 Advanced Networking**

**3 credits**

*Prerequisite: IT 250 Business Data Communications*

This course introduces students to switching and routing fundamentals within Local Area Networks (LANs). It covers key technologies such as VLANs, EtherChannels, and DHCP, along with device configuration and troubleshooting techniques. Students learn to configure VLANs, implement redundancy, support reliable networks, and secure LANs against attacks.

### **IT 424 Network Operating Systems**

**3 credits**

*Prerequisite: IT 250 Business Data Communications*

In this course, students will identify the main functions of workstation and network operating systems and be able to distinguish between the two. The basic functions of common network operating systems including Windows, Linux and MacOS will be examined and compared. Common examples of network utility software and Internet software, software licensing agreements, and network security/backup/recovery will be explored.

### **IT 426 Wireless Technology**

**3 credits**

*Prerequisite: IT 250 Business Data Communications*

This course describes the infrastructures, components and protocols of a wide range of wireless technologies. The course commences with a brief review of networking fundamentals including software and hardware used for interconnection of traditional wired networks. Examines existing wireless

technologies such as global positioning satellite (GPS), cellular digital packet data (CDPD), general packet radio service (GPRS), infra-red (IR), the operation and protocols for simplex tone and data paging systems, and local multi-point communication systems (LMCS). Addresses additional technologies such as Bluetooth, digital audio broadcast (DAB), and IMT-2000.

### **IT 428 Telecommunications Management**

**3 credits**

*Prerequisite: IT 250 Business Data Communications.*

This course focuses on the management of diverse network systems involving a set of layered responsibilities, which ensure that network communications channels are continuously available and perform optimally from source to destination. Topics include differentiating between technical, financial and operational responsibilities, network capacity planning and traffic analysis techniques, measurement of network reliability and availability, basic hardware and software network diagnostic tools, network security issues, and network help desk operations.

### **IT 430 Network System Design and Management**

**3 credits**

*Prerequisite: IT 250 Business Data Communications or related course work*

This course covers network design and management principles that network analysts, architects, engineers, and administrators must consider when planning, designing, implementing, and maintaining their network. Course topics include network management functions, network and system architectures, data and network communications technologies and protocols, server architectures and network operating systems, network security, and network and system administration. Additional topics covered that impact network design and management include network management tools and applications, wireless network architectures, interoperability, cloud computing, and virtualization.

### **IT 460 System Administration**

**3 credits**

*Prerequisite: IT 360 Operating Systems*

This course equips students with the knowledge and hands-on skills necessary for administering systems and their resources. Topics include directory services, user account management, file and print services, load balancing, and security and user/client administration. Through hands-on lab assignments, students set up and manage a fully functioning computer network of systems, tackling challenges involving the installation, configuration, and management of servers. Additionally, this course prepares students for the CompTIA Linux+ certification exam. Students learn to install and configure Linux-based servers, manage users and file systems, and implement security monitoring tools and techniques.

### IT 495 Integrated Technology Assessment BIX

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

In the Information Technology capstone course, students undertake a comprehensive group project that showcases their mastery of IT system integration, fulfilling all outcomes of the Information Technology degree. The project demonstrates students' understanding of core IT fundamentals and practices, including programming, information management, system administration and maintenance, operating systems and computer architecture, data communications and networking, human-computer interaction, and web systems and technologies. Throughout the course, students analyze complex computing problems, design and implement computing-based solutions, communicate effectively, recognize professional and ethical responsibilities, function as effective team members or leaders, and address user needs in IT systems, demonstrating their readiness for professional practice in the field.

### LA 298 Associate Degree Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The associate degree capstone is the culminating experience for students in the Associate Degree in Liberal Arts program. In the course, students demonstrate and reflect on the knowledge and skills they have acquired in the degree program and in other educational experiences up to this point. Students demonstrate mastery of the five Associate Degree in Liberal Arts learning outcomes: written and oral communication, cultural and global diversity, problem solving, ethics, and professional development. Students will demonstrate these outcomes through individual and group assignments, multi-modal presentations, and a final research paper.

This is an intense 8-week course with significant research and writing expectations. It is strongly recommended that students have prior experience with online course work, and particularly Excelsior University courses, before attempting this course. This course requires the completion of the listed prerequisites and the permission of the student's advisor.

### LA 498 Liberal Arts Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. The capstone can be paired with one (1) other course (excluding courses to meet the Written English Requirement and the Ethics Requirement).*

“Education is the most powerful weapon which you can use to change the world,” argued Nelson Mandela. So how are you going to change the world? In this culminating course for students in the Bachelor’s in Liberal Arts degree program, you will think critically about our current and future world. To demonstrate your achievement of the program outcomes, you will complete an independent research paper, group project, and reflective journal. Together, we will apply the skills and knowledge we have built on our educational journeys to build a better world.

### LA 498HIS History Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course is a culminating experience for students in history. As a capstone, this course is designed to bring together your cumulative knowledge and skills from your history program. You will question and consider: what are the fundamental skills of the historical discipline and how can they be applied to better understand the past, present, and your future goals? How does a historian think, gather evidence, interpret and contextualize the past, and communicate to diverse audiences? You will also examine historical methodology and the concept of historiography through a research project.

### LA 498NS Natural Science Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course is the culminating experience for students completing a major in Natural Sciences. A senior level course designed for advanced students and working professionals who are seeking to tie it all together. The course stretches across the natural science fields to apply multiple theories and research approaches to current events from the perspective of a variety of disciplines, including but not limited to Geology, Chemistry, Physics and Biology. Students will use their critical thinking skills along with oral and written communication skills while reviewing and analyzing ethical questions and the concepts of diversity across the natural science disciplines. Through a mixture of discussions, presentations and written analysis, students apply their previous learning in new ways both analyzing and synthesizing new perspectives on their learning. This a reading and writing intense course that should serve as the culmination of the students’ work at the Bachelor’s degree level.

This is an intense eight-week course requiring significant research and writing from the student.

### LA 498PSY Psychology Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This is a competency-based, senior level course designed for advanced students and working professionals seeking to complete their bachelor's degree in psychology. Course content focuses on demonstrating the competencies associated with the psychology degree program student learning outcomes. Through a mixture of discussions, reflective writing, and multimedia presentations, students apply knowledge, skills, and abilities to showcase their learning and interests. This course requires students to research and connect psychological theory to real-world problems, as students think deeply about their academic and career goals.

### LA 498SS Social Science Capstone

3 credits

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with one (1) other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course is the culminating experience for students completing a major in Social Sciences. This is a senior-level course designed for advanced students and working professionals who are seeking to make important connections among social science discipline areas. The course applies social science theory and best practices of evidence analysis to current events and reviews the theoretical foundations of the economics, political science and sociology disciplines. Students will evaluate the usefulness of these disciplines in analyzing social problems, and apply them to specific social policy dilemmas. Through a mixture of discussions and written analyses, students will review major theories, organize, and relate theoretical principles to evidence about real-world problems and gain experience analyzing decision making challenges that attend important social policy subjects.

### MAT 101 Mathematics for Everyday Life

3 credits

*Prerequisite: None*

The goal of this course is to help students develop mathematical reasoning and problem solving skills that will serve them well in their lives both in and out of school. Topics will include the important real-world applications of measurement units, managing money, statistics in the media, the mathematics of voting, and mathematics in the arts and nature. Providing correct solutions to routine problems is not the goal; more important is the ability to communicate effectively about mathematical reasoning and to solve realistic, practical problems both collaboratively with other students and individually.

MAT 101 is a survey course introducing the student to a variety of mathematical topics. It does not prepare a student for future courses that require a knowledge of algebra (e.g. Precalculus or Statistics).

### **MAT 108 Elementary Algebra**

**3 credits**

*Prerequisite: None*

This course is designed for students who have not yet become proficient with the fundamental topics of algebra needed for further study in mathematics and statistics. Covered in this course are operations on signed numbers, properties of real numbers, linear equations and inequalities, the Cartesian coordinate system, graphing, polynomials, rational and radical expressions and equations, factoring, and quadratic equations.

### **MAT 114 Intermediate Algebra**

**3 credits**

*Prerequisite: None*

This course covers algebra at an intermediate level in order to prepare students for subsequent courses in mathematics. Major topics include real numbers and algebraic expressions, equations and inequalities, functions and graphs, systems of equations and inequalities, polynomial expressions and functions, rational and radical expressions, and quadratic equations and functions.

### **MAT 120 Precalculus**

**4 credits**

*Prerequisite: MAT 114 Intermediate Algebra or equivalent*

Precalculus is a preparatory course for students who will go on to take calculus, emphasizing concepts fundamental to the field of study. This includes Functions and Graphs; Inverse Functions and Their Graphs; Polynomial and Rational Functions; Systems of Equations and Inequalities; Exponential and Logarithmic Functions; Sequences and Series, Trigonometric Functions; Right and Oblique Triangle Trigonometry; Applications of Trigonometry.

### **MAT 201 Statistics**

**3 credits**

*Prerequisite: MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra*

This course covers statistical skills such as collecting, organizing, summarizing, and analyzing information to draw conclusions or answer questions. Major topics include descriptive statistics, frequency distributions, probability, binomial and normal distributions, statistical inference, linear regression, and correlation.

MAT 201 duplicates BUS 233 Business Statistics, BUS 231 Business Data Literacy and MAT 215 Statistics for Health Care Professionals. Credit in only one of these courses will be applied toward graduation. MAT 201 also duplicates the Excelsior Examination MATx 210. Students will receive credit for either the course or the examination, as both will not be applied toward graduation. Prerequisite: MAT 101 or College Algebra.

### **MAT 205 Discrete Structures**

**3 Credits**

*Prerequisites: MAT 220 Calculus I or MAT 201 Calculus II*

This course provides the mathematical foundations for information technology and other technology fields. Topics covered in this course include logic, relations, functions, recursion, induction, set theory, patterns of inference, elementary combinatorics, algorithm complexity, and graph theory. It also introduces applications of discrete structures such as social network analysis and/or language modeling.

### **MAT 220 Calculus I**

**4 credits**

*Prerequisites: MAT 116 Precalculus Algebra and MAT 118 Trigonometry, or MAT 120 Precalculus*

This course provides students with an introduction to the basic concepts of the differential and integral calculus. Topics covered include functions; limits and continuity; differentiation rules; application to rates, approximations, and extremum problems; L'Hôpital's rule; approximation of definite integrals; the Fundamental Theorem of Calculus; definite and indefinite integration; applications of integration including area and arc length; and integration by substitution.

### **MAT 221 Calculus II**

**4 credits**

*Prerequisites: MAT 220 Calculus I*

This course is a continuation of MAT 220 Calculus I. Topics include techniques of integration, sequences, series, conics, parametric equations, vectors in space, and a brief introduction to ordinary differential equations.

### **MET 220 Statics**

**3 credits**

*Prerequisites: EGR 280 Introduction to 3-D Modeling, PHYS 201 Physics I, PHYS 202 Physics I Laboratory, MAT 120 Precalculus, MAT 220 Calculus I, and MAT 221 Calculus II*

This course introduces engineering mechanics in static systems. You apply basic principles of physics to the analysis of systems experiencing some combination of forces and torques, with an eye toward engineering applications. Statics deals with two- and three-dimensional systems of particles and rigid bodies in static equilibrium. In a general sense, each principle is applied first to a particle, then to a rigid body subjected to a coplanar system of forces, and finally, to three-dimensional force systems acting on a rigid body. Special attention devoted to forces in structures such as truss, frames, and machines. After building a fundamental understanding of these topics, we explore analysis of internal forces developed in structural members. Vector algebra are used throughout. The subject is called statics because it is concerned with particles and rigid bodies that are in equilibrium; these will usually be stationary (i.e., static).

### **MET 225 Strength of Materials**

**3 credits**

*Prerequisites: EGR 280 Introduction to 3-D Modeling, PHYS 201 Physics I, PHYS 202 Physics I Laboratory, MAT 120 Precalculus, MAT 220 Calculus I, MAT 221 Calculus II, and MET 220 Statics*

Strength of Materials addresses the stresses that are formed in rigid bodies due to the application of forces and torques. These stresses are used to size and for material selection of rigid bodies. This course also covers the theory and supports the application of essential mechanics of materials principles. Topics include concept of stress and strain, mechanical properties of materials, generalized Hooke's law, axial load, torsion, bending, transverse shear, combined loadings, and transformation of stress and strain components.

### **MET 270 Dynamics**

**3 credits**

*Prerequisites: EGR 280 Introduction to 3-D Modeling, PHYS 201 Physics I, PHYS 202 Physics I Laboratory, MAT 120 Precalculus, MAT 220 Calculus I, MAT 221 Calculus II, MET 220 Statics, MET 225 Strength of Materials*

This course provides a thorough and systematic introduction to the subject of dynamics of particles and rigid bodies. It covers the relationship between action and reaction when an object moves and kinetic equations of motion for a rigid body.

### **MET 275 Introduction to Microprocessors and Microcontrollers**

**3 credits**

*Prerequisites: PHY 203 Physics II, PHYS 204 Physics II laboratory, MAT 114 Intermediate Algebra or MAT 120 Precalculus, NUC 255 Electrical Theory, IT 211 Fundamentals of Programming*

This course covers the basic principles and applications of microprocessors and microcontrollers, with a particular focus on their role in robotics. The curriculum includes the hardware and software aspects of microprocessor systems, such as interfacing, assembly language programming, and microprocessor-based systems. Microprocessor and microcontroller applications in data acquisition and process control systems are introduced, as well as the architecture, operation, and programming of 8-, 16-, and 32-bit microprocessors. The course features a lab component using MATLAB Simulink, incorporating hands-on programming, interfacing with sensors and actuators, and designing basic robotic functionalities activities using microprocessors and microcontrollers. Upon completion of the course, students have the foundational knowledge and skills necessary to understand and apply microprocessors and microcontrollers in mechanical engineering, particularly in the context of robotics. Note, students registering for this course are assessed a course resource fee.

### **MET 280 Mechanics for Robotics**

**3 credits**

*Prerequisites: EGR 280 Introduction to 3-D Modeling, PHYS 201 Physics I, PHYS 202 Physics I laboratory, MAT 120 Precalculus, MAT 220 Calculus, MAT 221 Calculus II, MET 220 Statics, MET 225 Strength of Materials, MET 270 Dynamics*

This course explores the fundamental principles of mechanics as they apply to robotics, providing a deep understanding of the mechanics governing the motion, dynamics, and control of robotic systems. Through theoretical discussions and practical applications, topics such as force analysis, torque

analysis, equilibrium, motion analysis, and mechanisms commonly used in robotic systems are studied. Emphasis is placed on developing a comprehensive understanding of the mechanical components of robotic devices and their interactions with the environment. A laboratory component using SolidWorks is embedded into the course, offering exercises and projects to gain practical experience in applying mechanical principles to solve real-world problems in robotics. Students acquire essential knowledge and skills necessary for designing, analyzing, and optimizing the mechanical components of robotic devices. Note, students enrolling in this course are assessed a course resource fee.

### **MET 360 Manufacturing Processes**

**3 credits**

*Prerequisites: EGR 280 Introduction to 3-D Modeling, EGR 290 Manufacturing Processes*

This course explores core manufacturing processes, including casting, molding, forming, cutting, machining, joining, and the manufacturing of reinforced polymers (composites) and ceramic powder processing. Additionally, it covers Computer-Aided Manufacturing (CAM), programming, networking, and data communications, which are essential for modern manufacturing. Key focus areas include Design for Manufacturability (DFM), which streamlines product development to minimize costs and delays, and quality assurance practices, emphasizing inspection, testing, and defect analysis. Hands-on exercises and simulations provide practical experience in utilizing CAM software and conducting quality inspections. By the end of the course, students have a thorough understanding of manufacturing processes, reading them to optimize production workflows, enhance product quality, and innovate in industrial sectors. Note, students registering for this course are assessed a course resource fee.

### **MET 380 Applied Finite Element Analysis**

**3 credits**

*Prerequisites: PHYS 201 Physics I, PHYS 202 Physics I Laboratory, MAT 120 Precalculus, MAT 220 Calculus I, MAT 221 Calculus II, EGR 280 Introduction to 3-D Modeling, EGR 290 Advanced 3-D Modeling, MET 220 Statics, MET 225 Strength of Materials*

This course provides a foundation in applied computational mechanics, preparing students to tackle complex engineering problems in various industrial contexts. The course focuses on modeling techniques, meshing, application of boundary conditions, solving systems of equations, and post-processing of results for static, dynamic, thermal, and nonlinear analyses to predict how a part or assembly behaves under given conditions. Key topics include static and dynamic analysis, thermal analysis, and nonlinear analysis, all with an emphasis on real-world applications. Through hands-on lab sessions and projects, students gain practical experience in computational mechanics and develop a balanced theoretical background. Using Ansys software, students learn to set up models, perform meshing, run analyses, and interpret results to optimize designs, reducing the need for physical prototypes. Students gain practical experience with FEA software, learning to validate models and apply FEA to real-world engineering problems, including optimization and verification. Upon completion of this course students are equipped with the skills necessary to effectively apply FEA, contributing to innovation and optimization in mechanical design and analysis. Note, students registering for this course are assessed a course resource fee.

### **MET 390 Robotic Control Systems**

**3 credits**

*Prerequisites: PHYS 203 Physics II, PHYS 204 Physics II Laboratory, MAT 114 Intermediate Algebra or MAT 120 Precalculus, NUC 255 Electrical Theory, MET 275 Microprocessors and Microcontrollers, and IT 211 Fundamentals of Programming*

This course presents the theory and application of control systems specifically tailored for robotic platforms. Students explore the principles of control theory and their practical implementation in the design, operation, and optimization of robotic systems. The curriculum covers a range of topics, from classical control methods to modern techniques, providing a solid foundation for understanding, developing, and implementing control systems in various robotic applications. Incorporating programming, networking, and data communications, this course offers hands-on experience through a lab component. Through lectures, labs, and projects, students develop proficiency in designing, implementing, and analyzing control systems for robotics. By the end of the course, students are equipped with the knowledge and skills to innovate in robotics engineering, contributing to advancements in automation and robotics technology. Note, this course requires software that students must purchase if they do not already own it. If a student already owns the software, no additional purchase is necessary.

### **MET 400 Robotics and Automation**

**3 credits**

*Prerequisites: PHYS 201 Physics I, PHYS 202 Physics I Laboratory, PHYS 203 Physics II, PHYS 204 Physics II Laboratory, MAT 114 Intermediate Algebra or MAT 120 Precalculus, MET 220 Statics, MET 225 Strength of Materials, MET 270 Dynamics, NUC 255 Electrical Theory, MET 275 Microprocessors and Microcontrollers, MET 280 Mechanics for Robotics, MET 390 Robotic Control Systems, IT 211 Fundamentals of Programming*

This course provides a thorough exploration of the principles, technologies, and applications of robotics and automation. Students study the interdisciplinary nature of these fields, gaining a solid understanding of both theoretical foundations and practical implementation aspects. Covering topics from basic robotic mechanisms to advanced automation systems, the course equips students with the knowledge and skills to design, develop, and implement robotic and automated solutions across various industries. The course includes programming, networking, and data communications, offering hands-on experience through a lab component. Students gain practical experience with robotic hardware, industrial automation equipment, and software platforms such as ROS (Robot Operating System) and PLC (Programmable Logic Controller). By the end of the course, students are prepared to tackle challenges in robotics engineering and automation, contributing to advancements in technology and innovation in diverse industrial sectors. Note, this course requires software that students must purchase if they do not already own it. If a student already owns the software, no additional purchase is necessary.

### **MET 495 Mechanical Engineering Technology Capstone**

**3 credits**

*Prerequisites: Capstone must be the last course taken. All major core and university requirements must be complete. The Capstone can be paired with 1 other course that is considered to be a general education course (excluding courses to meet the Written English requirement and the Ethics requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Mechanical Engineering Technology capstone course integrates all fields of mechanical engineering technology. Students work in teams on practical engineering solutions to industry-level projects, supporting critical thinking and the development of research, teamwork, planning, and communication skills. Projects include open-ended design problems, design methodology, problem statements and specifications, alternative solutions, feasibility considerations, and detailed system descriptions, including realistic constraints like economic factors and social impact. The project experience includes regular feedback from faculty, peers, and a review panel of industry experts. Upon completion of this course, students demonstrate integrated competencies from prior coursework, showcasing enhanced skills in communication, teamwork, report writing, and presentations.

### **MIL 230 United States Military History**

**3 credits**

*Prerequisite: None*

To better understand the current and future challenges of new and dangerous warfare tactics, this course will describe and analyze military strategy as well as the causes of war throughout the evolution of the United States Military. Additionally, it will examine how the military has confronted social changes and diversity and analyze the ethical challenges of a new operational environment.

This course replaces MIL 130. Credit for only one of these courses will be applied toward graduation.

### **MIL 498 Military Studies Capstone**

**3 credits**

*Prerequisites: The capstone course represents a culmination of your public administration skills, by integrating classroom learning with practical experience. You will apply your skills to solve real problems for public and nonprofit organizations. Students draw on the coursework and their own work experiences to develop specific recommendations for design, implementation, and evaluation of the project tasks.*

The Military Leadership Capstone exposes students to relevant theories of military leadership, their applications to military operations, and leaders throughout history. By examining military leadership within the context of historical and political settings, students will develop a comprehensive knowledge of traits and characteristics that will contribute to their own leadership abilities. This course addresses all aspects of military leadership, how it is applied, what worked and what failed and why, and explores the diplomatic, economic, political, and social aspects of conflict and war. Students will improve their ability to think critically, and learn to become agile and adaptive leaders and decision makers.

## MUS 210 History of Rock and Roll

3 credits

*Prerequisite: None*

This course provides an introduction to the genre of rock and roll, its form and derivations, and rock and roll artists and bands spanning the years 1955 to 1970. Through reading and numerous listening examples, this course will look at the state of American popular music after World War II, the inception of rock and roll in the 1950s, the growth of youth culture in America, and the growing popularity of rock and roll through radio, film, and television.

## NS 110 Science in Today's World

3 credits

*Prerequisite: None*

The purpose of this course is to provide students with an overview of current and emerging trends in science and technology so that they will be able to make informed decisions and be informed consumers. It will introduce the scientific method and terminology used in reporting scientific results. It will also survey current topical science issues, preparing students to read about scientific, technological, and medical advances in the press and assess the scientific conclusions presented.

## NS 115 Introduction to Astronomy

3 credits

*Prerequisite: None*

Welcome aboard the USS Kepler! During the next eight weeks, we will be exploring this big, beautiful universe of ours! The itinerary of our voyage allows, after a brief look at a few key physical principles and the history of their development, a look at the cosmos on an increasingly large scale. Our journey will begin with a detailed study of our solar system as well as a discussion of planetary systems around other stars that are being discovered almost daily. From there, we'll examine the nature of stars how they are born, live, and die, and how they constitute the fundamental building blocks of one of the most important cosmic structures, the galaxy. This study of galaxy formation and evolution will lead us into a brief exploration of the current research in cosmology, including the as-of-yet undiscovered nature of dark energy and dark matter. We've reserved you a seat aboard our shuttle, so let's prepare to launch!

This course replaces PHYS 110. Credit for only one of these courses will be applied toward graduation.

## NS 120 Weather and Climate

3 credits

*Prerequisite: None*

This is a course designed to provide the student with a basic understanding of the dynamic, thermodynamic, and kinematic principles that control atmospheric processes and form daily and climatic weather events. The significance of atmospheric composition, global circulation, and energy and moisture transfer will be covered, as well as familiarity with standard weather observations. These foundations will allow the student to engage in interactive discussions, using critical thinking, to describe basic meteorological processes and comprehend safety needs during severe weather. A view into the intricacies of weather forecasting, descriptions of regional climates, and potential impacts of global climate change will be included.

### **NS 130 Are We Alone? Life in the Universe**

**3 credits**

*Prerequisite: The student should be comfortable performing simple algebraic calculations using calculators or spreadsheet software.*

This course uses the Drake Equation to answer the question “Are We Alone In the Universe?”. The Drake Equation is not only a model for estimating the number of alien civilizations in our galaxy but also a means of touring the many different fields of science upon which this question touches. By the end of this course, you will arrive at a personal estimate of how many alien civilizations exist in our galaxy. You will also conceptualize what one of these alien species might be like and how they might interact with their environment (including how they might seek to communicate with us). The Galaxy awaits. Let’s get started!

### **NUC 210 Health Physics and Radiation Protection**

**3 credits**

*Prerequisites: None*

This course provides an understanding of radiation protection principles essential for nuclear power plant operations. Key topics include radioactivity and radiation interactions, the biological impacts of ionizing radiation, and essential radiological calculations. The curriculum also examines radiation sources, detectors, and the standards outlined in 10 CFR 20, with an emphasis on both external and internal dosimetry methods. Understanding the standards provides students with an understanding workplace and environmental monitoring techniques. The course also highlights radiation protection principles and strategies, preparing students to handle radiological emergencies effectively. With this set of knowledge and skills, students can describe the international and national framework of radiation protection standards, explaining the basis of applicable federal regulations and guidance, as well as demonstrate proficiency in methods for safeguarding workers, the public, and the environment from radioactivity and radiation. Additionally, students gain the ability to interpret radioactivity and radiation measurements, applying standard methods for reporting results effectively.

### **NUC 211 Radiation Measurement Lab**

**1 credit**

*Prerequisite: NUC 210 Health Physics and Radiation Protection. NUC 210 may be taken concurrently with this course.*

This course provides experience in the use of instruments for the detection and analysis of radiation. Instruments included in the course are gas-filled detectors, scintillation counters, semiconductor detectors, radiation spectroscopy, neutron detectors, dosimetry, external dosimetry, and counting statistics.

## NUC 240 Atomic and Nuclear Physics

4 credits

*Prerequisites: NUC 210 Health Physics and Radiation Protection*

*Required Knowledge: To comprehend the course materials, the students need to have the following knowledge: Algebra, trigonometry, and basics of differential calculus, integral calculus, and differential equations; college level Physics I, Physics II, Physics I or Physics II Lab, and Chemistry with Lab; health physics radiation protection, and radiation measurements; basic computer literacy for technical problem solving, including installing software, naming files, transferring files, and navigating the internet; computer applications, including use of Microsoft Office (Word, Excel, PowerPoint, and Project).*

This course will provide a foundational introduction to Atomic and Nuclear physics, including key components of modern and quantum physics. Successful completion of this course will help you complete later coursework in this curriculum.

This course covers the structure of the atom and of the nucleus, atomic and nuclear energy states, the sources of radioactivity, the detection and measurement of the various types of radiation, nuclear reactions and neutron interactions, nuclear fission and fusion and the application of these concepts. These topics are discussed with focus on practical applications. This course will enhance learning in later topics in reactor physics, radiation safety, electronics, materials science, and chemistry.

## NUC 245 Thermodynamics

3 credits

*Prerequisites: MAT 120 Precalculus*

This course provides an understanding of thermodynamic and fluid flow principles, emphasizing their application to systems, particularly in nuclear power plant operations. Topics include thermodynamic properties, measurements, systems and processes, phase change, property diagrams, laws of thermodynamics, compression processes, heat transfer and heat exchange, boiling heat transfer, heat generation, decay heat, continuity equation, types of flow, Bernoulli equation, and pumps. The course includes laboratory work using a Generic Pressurized Water Reactor (PWR) simulator. This simulator provides hands-on experience with the circulating water system, steam generator heat balance, main and reheat systems, overall plant efficiency, flux distribution, decay heat production, and load rejection. Based on a real operating unit, this web-based simulator is thoroughly tested and verified to perform plant maneuvers realistically and accurately. By the end of the course, students are able to analyze thermodynamic processes in closed and open systems to identify the optimal or most efficient use of energy resources. Note, the PWR simulator utilizes specific technologies that may present accessibility challenges for individuals with disabilities. Accessibility inquiries can be directed to the department chair.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

## NUC 246 Thermal Measurement Laboratory

*Prerequisite: MAT 120 Precalculus. Students should not take NUC 246 Thermal Measurements Laboratory if they have taken NUC 245 Thermodynamics, or have met the thermodynamics requirement with a lab.*

*In order to comprehend the course materials, students need to have the following knowledge: General Physics and Fundamentals of Differential and Integral Calculus.*

This laboratory course provides students with an understanding of thermodynamic principles and how thermodynamics principles apply to systems, including the importance of understanding thermodynamic principles for nuclear power plant operations. This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator including Introduction to PWR Simulator, Circulating Water System, Steam Generator Heat Balance, Main and Reheat System, Overall Plant Efficiency, Flux Distribution, Decay Heat Production, and Load Rejection.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

## NUC 250 Introduction to Heat Transfer and Fluid Mechanics

**3 credits**

*Prerequisites: PHYS 201 Physics I, PHYS 202 Physics I Lab, MAT 120 Precalculus, NUC 245 Thermodynamics*

This course provides a fundamental grounding in the principles of heat, heat transfer, and fluid mechanics, as they apply to power plant operation. While designed to meet the requirements of the Nuclear Uniform Curriculum Program, specifically Section 1.1.5 Heat Transfer and Fluid Flow of ACAD 08-006 for Non-Licensed Nuclear Operators, this course has broad applicability for anyone interested in power plant technology, regardless of the heat source used. The course covers the following broad topics: Temperature, its measurement, and pressure-temperature relationships in power plant steam and water systems; heat, its various forms, mechanisms and mechanics of heat transfer, and the related power plant components used to transfer heat; and fluid mechanics as they relate to heat and heat transport in power plant steam systems and power plant water systems.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

### **NUC 255 Electrical Theory**

**3 credits**

*Prerequisites: PHYS 203 Physics II, and PHYS 204 Physics II Laboratory, and MAT 114 Intermediate Algebra; or MAT 120 Precalculus*

This course examines the theory of electrical circuits and electronic control components used in nuclear and commercial power plants. Topics include AC and DC current, voltage, capacitance, inductance, energy, power, Kirchhoff's laws, linear voltage-current characteristics, digital logic gates, voltage regulation and amplification using diodes, transistors, and operational amplifiers, transformers, DC and AC motor and generator operations, and battery construction, theory, and operation. The course utilizes the open-source online electronic circuit simulator Falstad to provide hands-on learning experiences. By the end of the course, students can design, modify, and analyze AC and DC circuits to achieve and improve desirable output characteristics.

### **NUC 260 Power Plant Components**

**3 credits**

*Prerequisites: MAT 114 Intermediate Algebra, MAT 120 Precalculus*

This course covers the theory, design, and application of mechanical and electrical components such as heat exchangers, valves and actuators, pumps, turbines, diesel engines, electrical motors, transformers, instrument controls, and air compressors. Group discussions focus on practical applications in power plants. Students have access to WSC's Generic Pressurized Water Reactor (PWR) simulator, enhancing their understanding of components and system interrelations. By the end of this course, students can present the basic theory, construction, and application of plant electrical equipment, such as heat exchangers, steam turbines, electrical generators AC electrical motors, transformers etc, and identify ways to improve overall plant efficiency.

### **NUC 271 Fundamentals of Reactor Safety**

**3 credits**

*Prerequisite: None*

This course provides an overview of nuclear reactor plant safety design topics, including regulatory requirements, reactor plant safety analysis, reactor protection systems, plant procedural structure, and emergency planning. It also explores significant industry events such as Three Mile Island, Chernobyl, Fukushima, and the impact of the 9/11 terrorism event. Laboratory work is conducted using a Generic Pressurized Water Reactor (PWR) simulator. Note, the PWR simulator utilizes specific technologies that may present accessibility challenges for individuals with disabilities. Accessibility inquiries can be directed to the department chair.

### **NUC 280 Leading Change in the Nuclear Industry**

**3 credits**

*Prerequisite: None*

This course provides learners with the theory and knowledge necessary to lead change in the nuclear industry. Topics include leadership theories associated with organizational change, visionary leadership, changing behaviors, resistance to change, and conflict. Discussions will focus on change management processes and ethical practices relevant to the nuclear industry to ensure the safe and efficient operation of nuclear facilities.

## NUC 285 Leadership Communications in the Nuclear Industry

3 credits

*Prerequisite: None*

This course will provide students with the knowledge and skills to formulate effective strategies for communicating with stakeholders in the nuclear industry. Students will be able to identify appropriate media and methods of communication, as well as develop feedback and monitoring strategies to ensure that the communication is effective. In addition, students will analyze communication strategies and provide an oral presentation of a proposed strategy.

## NUC 323 Material Science

3 credits

*Prerequisites: CHE 101 General Chemistry I, MAT 120 Precalculus, MAT 220 Calculus I, MAT 221 Calculus II*

This course explores the use of materials in nuclear engineering applications. Topics include an overview of basic nuclear plant operations, atomic bonding, crystalline and non-crystalline structures, diffusion, phase diagrams, mechanical and thermal behavior, failure analysis and prevention, structural materials, ceramics, corrosion, radiation effects on materials, and material challenges associated with reactor core operation. Additionally, the course examines materials commonly used in reactor core and nuclear plant design. Students gain an understanding of the properties and behaviors of materials critical to nuclear engineering, equipping them to address material-related issues in reactor design and operation.

## NUC 330 Reactor Core Fundamentals

3 credits

*Prerequisites: NUC 210 Health Physics and Radiation Protection, and NUC 240 Atomic and Nuclear Physics*

This course is an introduction to the theory behind operational neutron chain reaction systems. Specific topics in the course include neutron cross sections, fast, epithermal, and thermal neutron fluxes, reaction rates, the fission process, neutron production, neutron multiplication, the six-factor formula, reactivity, subcritical multiplication, prompt and delayed neutron fractions, reactor period, reactivity coefficients, control rod worth, and fission product poisons.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

## NUC 350 Plant Systems Overview

3 credits

*Prerequisites: NUC 271 Fundamentals of Reactor Safety, or NUC 330 Reactor Core Fundamentals*

This course provides an overview of the design, layout, and function of major systems associated with the two nuclear power plant designs currently used for U.S. power production: pressurized water reactors (PWR) and boiling water reactors (BWR). The curriculum examines a typical nuclear power plant system by system, focusing on major components, controls, and design features. Emphasis is placed on plant system interconnections and functions relative to nuclear safety. PWR and BWR

simulation learning tools are utilized to apply and reinforce course material through dynamic learning activities. Laboratory work is conducted using a Generic Pressurized Water Reactor (PWR) simulator. By the end of the course, students have a comprehensive understanding of the critical systems in nuclear power plants and their importance in ensuring operational safety and efficiency. Note, the PWR simulator utilizes specific technologies that may present accessibility challenges for individuals with disabilities. Accessibility inquiries can be directed to the department chair.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

### **NUC 360 Nuclear Leadership— Risk Management/Leadership Courage** **3 credits**

*Prerequisites: None*

This course covers the knowledge and skills necessary to integrate leadership into operational decisions associated with nuclear power plants. Students will be able to develop teams and integrate them into the framework of a commercial nuclear business. This will include developing and demonstrating appropriate business acumen as well as demonstrating an understanding of risk in decision making processes. In addition, the course will focus on helping students develop leadership styles appropriate to improving the effectiveness of their future organizations.

### **NUC 495 Integrated Technology Assessment BNX** **3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This capstone course integrates all fields of nuclear engineering technology. Students will draw on their knowledge of nuclear engineering technology and competencies to analyze reactor plant scenarios. The purpose of the course is to integrate the learning achieved in individual nuclear engineering technology courses taken, evaluated industry training, and naval nuclear power training to earn a nuclear engineering technology degree. The knowledge and competencies acquired in natural sciences, health physics and radiation protection, thermodynamics, heat transfer and fluid flows, reactor core fundamentals, and plant systems overview will be utilized to study the principles in nuclear engineering technology. Students will participate in a reactor plant simulation experience that requires considering multiple theoretical concepts and applying those concepts to plant applications. An individual capstone project and a watch team capstone project will be developed and presented to the instructor.

This course contains laboratory work based on a Generic Pressurized Water Reactor (PWR) simulator.

This course utilizes specific technologies that may not be accessible to individuals with disabilities. If you have any questions or difficulties, please contact your instructor.

## NUR 101 Introduction to Professional Nursing

2 credits

(2.0 credits didactic)

*Prerequisites: NUR 104 Essentials of Nursing Care: Health Safety, NUR 105 Essentials of Nursing Care: Health Differences, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

This introductory course focuses on the competencies and core values inherent in the role of the Registered Professional Nurse. Collaboration with interprofessional healthcare team members is presented.

Assignment, delegation, and supervision responsibilities of the Registered Professional Nurse, as well as legal influences, ethics, and scope of practice are explored.

Delivery: Online course delivered over 8 weeks.

## NUR 104 Essentials of Nursing Care: Health Safety

3 credits

(2.5 credits didactic, 0.5 credits lab)

*Prerequisites: ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra*

This content focuses on the use of nursing process to provide and manage patient-centered care for persons across the life span. Patient teaching is discussed. Documenting and reporting nursing care and the use of informatics in health care are presented. The concepts of health promotion, maintenance, obtaining a health history, and the techniques of physical assessment are presented. Attention to safe and effective care with respect to environmental safety needs, emergency preparedness, use of restraints, infection control, and the prevention and management of pressure injury is explored. Pharmacology, safe medication administration and related nursing care are also addressed. Safe use of the nursing process is fundamental in this course.

All the skills labs in this course must be successfully completed with a satisfactory grade of "Complete" to pass this course, regardless of the course numeric grade. Skills labs are graded as Satisfactory (Complete) or Unsatisfactory (Incomplete).

Students must purchase one skills kit (available in the bookstore) for use in the NUR 104 and NUR 105 course. Items within them are necessary for students to use during their application of nursing clinical skills assignments for evaluation and feedback by the course instructor.

Delivery: Online course delivered over 8 weeks.

## NUR 105 Essentials of Nursing Care: Health Differences

3 credits

(2.5 credits didactic, 0.5 credits lab)

*Prerequisites: NUR 104 Essentials of Nursing Care: Health Safety, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

*May be taken concurrently with NUR 104 Essentials of Nursing Care: Health Safety.*

This content focuses on the application of the nursing process to support nursing judgment for the provision of evidence-based, patient-centered care. Patient-centered care addressing the promotion of health and achievement of optimal outcomes for patients experiencing common health problems related to nutrition, elimination, oxygenation, fluid, and electrolyte balance, mobility, activity, sleep, and rest is presented in this content. Knowledge of anatomy and physiology and the nursing process is used to support nursing judgment. Ethical and legal implications along with evidence-based standards of nursing practice are presented in relation to safe, quality nursing care for patients and families across the life span.

All the skills labs in this course must be successfully completed with a satisfactory grade of “Complete” to pass this course, regardless of the course numeric grade. Skills labs are graded as Satisfactory (Complete) or Unsatisfactory (Incomplete).

Students must purchase one skills kit (available in the bookstore) for use in the NUR 104 and NUR 105 course. Items within them are necessary for students to use during their application of nursing clinical skills assignments for evaluation and feedback by the course instructor.

Delivery: Online course delivered over 8 weeks.

## NUR 108 Transition to the Professional Nurse Role

3 credits

(3.0 credits didactic)

*Prerequisites: NUR 104 Essentials of Nursing Care: Health Safety, NUR 105 Essentials of Nursing Care: Health Differences, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra*

The knowledge and competencies in relation to the role of the Registered Professional Nurse are addressed in this content. Assignment, delegation, and supervision responsibilities of the Registered Professional Nurse are emphasized. Recognition of the Registered Professional Nurse role in collaboration with the various interprofessional healthcare providers is presented. Forces affecting the role of the Registered Professional Nurse such as nursing history, nursing organizations, regulatory agencies, ethics, law, technology, health care delivery systems and scope of practice are explored.

Delivery: Online course delivered over 8 weeks.

## NUR 109 Foundations in Nursing Practice

3 credits

(3.0 credits didactic)

*Prerequisites: NUR 104 Essentials of Nursing Care: Health Safety, NUR 105 Essentials of Nursing Care: Health Differences, NUR 101 Introduction to Professional Nursing or NUR 108 Transition to the Professional Nurse Role, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

*May be taken concurrently with NUR 101 Introduction to Professional Nursing or NUR 108 Transition to the Professional Nurse Role.*

This content focuses on the application of the nursing process to support nursing judgment for the provision of patient-centered care. The foundations of nursing practice include the care of culturally diverse patients experiencing health problems related to discomfort, pain, and sensory impairment. Growth and development and its relationship to health, injury prevention, illness, and continuity of care in a variety of settings are studied. Chronic illness, disability, and end of life needs, as well as pertinent ethical, legal, and regulatory requirements and the standards of professional nursing practice are addressed. Concepts and theories from the natural and social sciences are applied while caring for patients and families across the life span.

Delivery: Online course delivered over 8 weeks.

## NUR 124 Health Assessment 1

3 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics*

This content focuses on the use of the nursing process, physical assessment, and health promotion of individuals across the life span. Included are techniques and instruments necessary for the examination and wellness promotion initiatives. Client teaching is discussed. Documenting and reporting nursing care and the use of informatics in health care are presented. The concepts of health promotion, maintenance, obtaining a health history and the techniques of physical assessment are presented.

Corequisites: BIO 213 Pathophysiology, NUR 124L Health Assessment I Lab

## **NUR 124L Health Assessment 1 Lab**

**1 credit**

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics*

This lab course focuses on the application of the nursing process, physical assessment, and health promotion of individuals across the life span. Students engage in hands-on practice of assessment techniques necessary for conducting physical examinations and promoting wellness. Students practice obtaining a health history and conduct a general survey to assess a client's overall health status. Students perform a comprehensive physical assessment and implement health promotion and maintenance strategies in a lab environment. Through simulated client scenarios, students develop skills in client teaching, documentation, and communication of nursing care.

Corequisites: BIO 213 Pathophysiology, NUR 124 Health Assessment I

## **NUR 129 Fundamentals of Nursing**

**3 credits**

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab*

This course introduces students to the foundational concepts and skills of professional nursing practice. Emphasis is placed on the application of the nursing process to support clinical judgment and provide safe, client-centered care across the life span. Students explore the care of culturally diverse individuals experiencing pain, discomfort, sensory changes, and chronic conditions. Topics include growth and development, health promotion, illness prevention, and the continuity of care in a variety of settings. Legal, ethical, and regulatory frameworks, along with professional standards, are integrated throughout. Scientific principles from the natural and social sciences inform nursing care for individuals and families, with attention to end-of-life needs and disability.

Corequisites: NUR 129L Fundamentals Lab, NUR 129C Fundamentals Clinical, NUR 130 Cultural Diversity in Nursing

## NUR 129 Fundamentals of Nursing Lab

0.5 credit

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab*

This skills-based lab course provides students with the opportunity to learn and practice fundamental nursing skills essential for safe, client-centered care. Using simulation and return demonstration, students apply the nursing process while developing clinical judgment, communication, and technical proficiency. Emphasis is placed on infection control, vital signs, hygiene, mobility, medication administration, and safety procedures. Students gain confidence in delivering care to diverse populations across the life span, preparing them for success in clinical settings.

Corequisites: NUR 129 Fundamentals, NUR 129C Fundamentals Clinical, NUR 130 Cultural Diversity in Nursing

## NUR 129 Fundamentals of Nursing Clinical

0.5 credit

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab*

This clinical course provides students with supervised, hands-on experience in delivering fundamental nursing care to individuals across the life span. Students apply the nursing process in clinical settings to develop clinical judgment, prioritize client safety, and promote compassionate, culturally sensitive, client-centered care. Emphasis is placed on basic nursing interventions, communication, documentation, infection prevention, and collaboration with the health care team. Through direct client care, students integrate foundational knowledge, technical skills, and professional behaviors necessary for beginning nursing practice.

Corequisites: NUR 129 Fundamentals, NUR 129L Fundamentals Lab, NUR 130 Cultural Diversity in Nursing

## NUR 130 Cultural Diversity in Nursing

3 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab*

This course introduces nursing students to the role of culture and diversity in health, illness, and health care delivery, emphasizing how cultural beliefs, values, and traditions shape health experiences and interactions with health care providers. Students explore key topics such as health disparities, social determinants of health, and barriers to care that affect diverse and historically excluded groups. The course also examines the impact of public policy, ethics, and social factors on health care access and outcomes, with a focus on addressing the unique needs of these populations. Students discuss various forms of diversity, including race, ethnicity, religion, gender identity, sexual orientation, socioeconomic status, disability, and more. Throughout the course, students learn to recognize biases, challenge common myths, and develop culturally sensitive communication skills. The ultimate goal is to prepare future nurses to provide inclusive, respectful, and client-centered care while advocating for health equity in an increasingly diverse world.

Corequisites: NUR 129 Fundamentals, NUR 129L Fundamentals Lab, NUR 129C Fundamentals Clinical

## NUR 209 Reproductive Health

3 credits

*(3.0 credits didactic)*

*Prerequisites: All Nursing Phase I requirements, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

This content focuses on the application of the nursing process to support nursing clinical judgment and patient-centered care in reproductive health across the life span. A variety of reproductive health conditions and problems are presented including current topics in reproductive health, male and female reproductive disorders, childbearing, congenital anomalies, genetic disorders, and an introduction to newborn and pediatric health. Evidence-based, culturally sensitive nursing care, standards of professional nursing practice, as well as ethical, legal, and regulatory requirements are addressed. Principles, concepts, and theories from the natural and social sciences in relation to safe, quality nursing care are applied to patients and their families across the life span.

Additionally, students must complete a mandatory maternal/newborn, postpartum and/or pregnant patient practice experience with a community partner addressing the health care needs of this patient population. Failure to complete and submit mandatory course components will result in failing the course.

Delivery: Online course delivered over 8 weeks.

## NUR 211 Health Differences Across the Life Span 1

3 credits

(3.0 credits didactic)

*Prerequisites:* All Nursing Phase I requirements, NUR 209 Reproductive Health, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology I (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.

*May be taken concurrently with NUR 209 Reproductive Health.*

This requirement focuses on the application of the nursing process to support nursing judgment and the provision of patient-centered care for patients with acute and chronic cardiovascular and respiratory health problems, impaired blood cell formation, and abnormal cell growth. Evidence-based, culturally sensitive nursing care, standards of professional nursing practice, as well as ethical, legal, and regulatory requirements are addressed. The natural and social sciences are applied to the delivery of quality nursing care for patients and families across the life span.

Delivery: Online course delivered over 8 weeks.

## NUR 212 Health Differences Across the Life Span 2

3 credits

(2.5 credits didactic, 0.5 credits lab)

*Prerequisites:* All Nursing Phase I requirements, NUR 209 Reproductive Health, NUR 211 Health Differences Across the Life Span 1, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.

This requirement focuses on the application of the nursing process to support judgement and the provision of patient-centered care. A wide variety of health problems are presented. These include mental health disorders, cognitive impairment, diabetes mellitus, and dysfunction of endocrine, hepatic, biliary, renal, and pancreatic systems. Evidence-based, culturally sensitive nursing care, standards of professional nursing practice, as well as ethical, legal, and regulatory requirements are addressed. The application of anatomy and physiology, microbiology, and social science concepts is essential for the provision of safe quality patient care.

**Online Lab Requirement:** Online lab assignments are a mandatory component of this course to meet the required lab hours. Attendance during instructor-led online lab activities, including participation in synchronous Zoom sessions, is required. Failure to complete any portion of the online lab activities, resulting in an “Incomplete,” will lead to course failure as the lab hour requirement will not be met.

Continued on next page

Additionally, students must complete a mandatory mental health practice experience with a community partner addressing the health care needs of acute and chronic psychiatric, behavioral, and/or cognitive patients. Failure to complete and submit mandatory course components will result in failing the course.

The laboratory component is a practice experience using virtual simulation patients included in the required resource for the course.

All the laboratory requirements in this course must be successfully completed with a satisfactory grade of “Complete” to pass this course, regardless of the course numeric grade.

Delivery: Online course delivered over 8 weeks.

### **NUR 213 Health Differences Across the Life Span 3**

**3 credits**

*(3.0 credits didactic)*

*Prerequisites: All Nursing Phase I Requirements, NUR 209 Reproductive Health, NUR 211 Health Differences Across the Life Span 1, NUR 212 Health Differences Across the Life Span 2, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

*May be taken concurrently with NUR 212 Health Differences Across the Life Span 2.*

This course focuses on the application of the nursing process to support nursing judgment for the provision of care for persons with health problems related to infectious and communicable diseases, tissue trauma, neurological dysfunction, and musculoskeletal disorders. Content areas include immune function, chain of infection, perioperative nursing, neuromuscular functional assessment, and musculoskeletal disorders. Health problems such as HIV/AIDS, tuberculosis, hepatitis, degenerative diseases, stroke, and trauma are highlighted. Evidence-based, culturally sensitive nursing care, standards of professional nursing practice, as well as ethical, legal, and regulatory requirements are addressed. Principles, concepts, and theories from the natural and social sciences in relation to safe quality nursing care are applied to clients and families across the life span.

Delivery: Online course delivered over 8 weeks.

## NUR 220 Adult Complex Health 1

4 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals, NUR 129L Fundamentals Lab, NUR 129C Fundamentals Clinical, NUR 130 Cultural Diversity in Nursing*

This course prepares students to integrate the nursing process in managing complex adult health conditions, with emphasis on cardiovascular, respiratory, hematologic, and oncologic disorders. Students develop clinical judgment through prioritization, critical thinking, and application of evidence-based interventions in dynamic and diverse care settings. The course highlights culturally responsive, client-centered care while reinforcing professional standards, ethical and legal responsibilities, and interdisciplinary collaboration. Foundational concepts from the natural and social sciences, including principles of anatomy and physiology and microbiology—are applied to promote safe, high-quality outcomes across the life span.

Corequisites: NUR 220C Adult Complex Health I Clinical

## NUR 220C Adult Complex Health 1 Clinical

2 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals, NUR 129L Fundamentals Lab, NUR 129C Fundamentals Clinical, NUR 130 Cultural Diversity in Nursing*

This clinical course provides students with the opportunity to apply the nursing process in the care of adults experiencing complex cardiovascular, respiratory, hematologic, and oncologic conditions. Emphasis is placed on developing clinical judgment, prioritization, and decision-making skills in high-acuity medical-surgical settings. Through supervised learning experiences in clinical practice settings, students deliver culturally responsive, client-centered care while collaborating with the interprofessional team and upholding professional, ethical, and legal standards.

Corequisites: NUR 220 Adult Complex Health I

## NUR 221 Women, Children, and Families

4 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I (can be taken concurrently), NUR 220C Adult Complex Health I Clinical (can be taken concurrently)*

This course focuses on the application of the nursing process to support clinical judgment and provide client-centered care in reproductive, newborn, pediatric, and family health contexts. Students explore a range of health conditions and issues, including male and female reproductive disorders, childbearing and postpartum care, congenital anomalies, genetic conditions, and common pediatric concerns. Emphasis is placed on evidence-based, developmentally appropriate, and culturally sensitive nursing care that considers the unique needs of diverse families. The course integrates professional standards of nursing practice along with ethical, legal, and regulatory considerations. Foundational concepts from the natural and social sciences are applied to promote safe, high-quality care for individuals and families across the life span.

Corequisites: NUR 221C Women, Children and Families Clinical

## NUR 221C Women, Children, and Families Clinical

1 credit

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I (can be taken concurrently), NUR 220C Adult Complex Health I Clinical (can be taken concurrently)*

This clinical course provides students with guided experience in delivering nursing care to women, newborns, children, and families across diverse health care settings. Students apply the nursing process to develop clinical judgment, promote safety, and provide evidence-based, culturally responsive care for reproductive, maternal, newborn, and pediatric clients. Emphasis is placed on developmentally appropriate communication, family-centered care, health promotion, and collaboration within the interprofessional team. Students are expected to integrate ethical, legal, and professional standards while caring for clients and families during critical transitions across the life span.

Corequisites: NUR 221 Women, Children and Families

## NUR 222 Adult Complex Health 2

3 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical*

This course emphasizes the application of the nursing process to support clinical judgment and provide client-centered care for individuals experiencing a wide range of acute and chronic health conditions. Topics include diabetes mellitus; dysfunction of the endocrine, hepatic, biliary, renal, and pancreatic systems; infectious and communicable diseases; tissue trauma; neurological and musculoskeletal disorders. Additional content covers immune function, the chain of infection, perioperative nursing, neuromuscular and functional assessments, and complex conditions such as HIV/AIDS, tuberculosis, hepatitis, stroke, trauma, and degenerative diseases. Students apply evidence-based, culturally responsive care within the framework of professional nursing standards and ethical, legal, and regulatory guidelines. Scientific principles from anatomy and physiology, microbiology, and the natural and social sciences are integrated to promote safe, high-quality nursing care across the life span.

Corequisites: NUR 222C Adult Complex Health II Clinical

## NUR 222C Adult Complex Health 2 Clinical

2 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical; Corequisites*

This clinical course provides students with supervised experience in delivering safe, evidence-based nursing care to individuals with complex health conditions across diverse health care settings. Students apply the nursing process to manage care for clients experiencing endocrine, hepatic, renal, pancreatic, neurological, musculoskeletal, and immune system disorders, as well as infectious diseases, perioperative needs, and trauma. Emphasis is placed on clinical judgment, prioritization, effective communication, and culturally responsive, client-centered care. Students integrate professional nursing standards, ethical and legal principles, and interprofessional collaboration to support quality outcomes for clients and families across the life span.

Corequisites: NUR 222 Adult Complex Health II

## NUR 250 Clinical Nursing Practicum: Care of Patients Across the Lifespan 4 credits

*(3.0 credits didactic, 1 credit clinical)*

*Prerequisites: All Nursing Phase I and Nursing Phase II requirements, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

*Completion of required clinical documentation. Verification of Health Care Experience (VHCE) form must be submitted when no more than 6 credits in general education are still needed. The VHCE form expires three (3) months after the date with supervisor's signature. Students should consult with the academic advising team regarding the VHCE form. LPN license will be reviewed to ensure the license is still active and unencumbered.*

Verification of Health Care Experience (VHCE) form must be submitted when no more than 6 credits in general education are still needed. The VHCE form expires three (3) months after the date with supervisor's signature. Students should consult with the academic advising team regarding the VHCE form. LPN license will be reviewed to ensure the license is still active and unencumbered.

In this clinical course, students focus on the application of contemporary competencies and practice guidelines for the delivery of safe, quality patient care. Students will complete the ATI Capstone, a comprehensive review of nursing content designed to reinforce knowledge and skills. This includes unique weekly content activities and assessments, individualized post-assessment assignments based on performance, and an ATI Focused Review to support mastery of critical concepts. Students provide direct care for patients across the life span who are experiencing non-critical medical-surgical conditions in the acute care setting. A satisfactory grade in the clinical experience is required to pass the course, regardless of the course numeric grade.

*Online Clinical Requirement: Online clinical assignments are a mandatory component of this course to meet the required clinical hours. Attendance during instructor-led online clinical activities, including participation in synchronous Zoom sessions, is required. Failure to complete any portion of the online clinical activities, resulting in an "Incomplete," will lead to course failure as the clinical hour requirement will not be met.*

The online clinical component is a practice experience using virtual simulation patients included in the required resource for the course.

Delivery: Hybrid course delivered over 8-weeks. Online lectures, synchronous instructor-led clinical sessions, and in-person clinical components.

## NUR 275 Competencies for Contemporary Nursing Practice

3 credits

(3 credits didactic)

*Prerequisites: All Nursing Phase I and Nursing Phase II requirements, NUR 250 Clinical Nursing Practicum: Care of Patients Across the Lifespan, ENG 101 English Composition or ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 116 Anatomy and Physiology II (NonLab), BIO 212 Microbiology, MAT 101 Mathematics for Everyday Life or MAT 114 Intermediate Algebra.*

The course is designed for students to apply competencies for contemporary nursing practice. Assessment Technologies Institute (ATI) products for NCLEX preparation are integrated throughout the course, including Comprehensive and Content Mastery Assessments that focus on nursing fundamentals, adult medical-surgical, pharmacology, pediatric, newborn and women's health, mental health, and leadership. Emphasis is placed on remediation to strengthen areas of weakness identified through practice assessments.

Students will participate in four NCLEX Success Sessions, which emphasize content knowledge, clinical judgment, professional values, and comprehensive NCLEX preparation.

The course includes a group collaboration assignment, demonstrating teamwork, interprofessional collaboration, and understanding medical emergencies. Additionally, students must complete a mandatory pediatric practice experience with a community partner addressing pediatric healthcare needs. Failure to complete and submit mandatory course components will result in failing the course.

Delivery: Online course delivered over 8 weeks.

## NUR 290 Nursing Capstone: Advanced Clinical Practicum

4 credits

(3 credits didactic, 1.0 credit clinical)

*Prerequisites: Completion of all required clinical documentation. The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with one (1) other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course further develops the role of the nursing professional, focusing on advanced skills, knowledge, judgment, professional values, and NCLEX preparation. It includes a clinical experience where care for multiple patients in a healthcare facility is required. Clinical experiences are scheduled, requiring travel to a clinical site during the course term.

The instructional portion integrates products from Assessment Technologies Institute (ATI) for NCLEX preparation, including the Virtual ATI series (vATI), designed in partnership with Excelsior to prepare for NCLEX success. Additionally, a mandatory ATI 2-Day Live Review is held during the last week of the course.

To successfully pass the course, a satisfactory grade in clinical practice, completion of all online clinical activities marked as "Complete", attendance at the mandatory ATI 2-Day Live Review, and a grade of C or higher are required.

Delivery: Hybrid course delivered over 8-weeks. Online lectures, synchronous instructor-led clinical sessions, and in-person clinical components.

## NUR 301 Bridge for Professional Socialization

2 credits

*Prerequisite: ENG 101 English Composition or ENG 101A Advanced Composition*

This course expands on the content of NUR 101 and focuses on the student transitioning to the role of a baccalaureate-prepared nurse. Professional nursing concepts are expanded on, and the pivotal role nurses play in health care is emphasized. Building on previous knowledge and experience, students participate in intellectual dialogue on the role of the nurse in a diverse society and examine how their own professional development can affect policy changes within the profession and in health care. Promoting critical analysis through a person-centered care experience will transform and create new ways of approaching professional practice.

Delivery: Online course delivered over 8 weeks.

## NUR 326 Mental Health Nursing

3 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II (can be taken concurrently), NUR 222C Adult Complex Health II Clinical (can be taken concurrently)*

This course focuses on the care of individuals experiencing acute and chronic alterations in mental health. Students examine psychopathology, psychopharmacologic therapies, therapeutic communication, and the role of the nurse in promoting mental health and recovery. Topics include cognitive impairment, anxiety disorders, mood disturbances, thought disorders, self-concept issues, substance use disorders, organic brain syndromes, and concerns related to abuse and violence.

The course also addresses health promotion strategies, stress management, and personal growth within the context of mental wellness. Students explore individual and group therapy approaches, as well as community mental health resources. Emphasis is placed on delivering evidence-based, culturally responsive nursing care within the framework of professional standards and ethical, legal, and regulatory guidelines to ensure safe, high-quality care for diverse populations.

Corequisites: NUR 326C Mental Health Nursing Clinical

### **NUR 326C Mental Health Nursing Clinical**

**1 credit**

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II (can be taken concurrently), NUR 222C Adult Complex Health II Clinical (can be taken concurrently)*

This clinical course provides students with supervised experience in caring for individuals with acute and chronic mental health conditions across a variety of inpatient and community-based settings. Students apply the nursing process to support mental and emotional well-being, using therapeutic communication, clinical judgment, and culturally responsive care. Emphasis is placed on building therapeutic relationships, promoting safety, de-escalation techniques, and engaging in individual, group, and family-centered care. Students integrate knowledge of psychopathology, psychopharmacology, and community mental health resources while adhering to professional standards, ethical and legal frameworks, and regulatory guidelines. This clinical experience reinforces the nurse's role in advocacy, collaboration, and recovery-oriented care for individuals and families experiencing mental health challenges.

Corequisites: NUR 326 Mental Health Nursing

### **NUR 336 The Profession of Nursing, Becoming Influential**

**3 credits**

*Prerequisite: ENG 101 English Composition or ENG 101A Advanced Composition*

This course will focus on the core values of professional nursing and their associated behaviors. Building on previous knowledge and experience students will critically consider nursing's professional roles and responsibilities in the healthcare delivery system. Selected concepts will be presented in the context of social justice and will include the use of nursing theory and evidence-based knowledge to provide care for diverse populations, ethics and value-based professionalism, professional confidence, empowerment, and caring and compassion. In addition to classroom dialogue and written assignments, students will engage in a 1-hour practice experience that will support new understandings for professional practice.

Delivery: Online course delivered over 8 weeks.

## NUR 338 Introduction to Informatics for Nurses

2 credits

*Prerequisite: None*

This course provides knowledge about the informatics roles and skills utilized in professional nursing practice. Emphasis is placed on the use of information processes and information technology to support patient care interventions in an interprofessional healthcare environment. The course will focus on the use of information technology tools to support healthcare decision-making for patients, healthcare consumers, and professional colleagues. Nursing informatics specialization competencies and the role of nurses in improving patient outcomes and supporting a safe healthcare environment, through the use of information technology, will be included.

Delivery: Online course delivered over 8 weeks.

## NUR 342 Holistic Health Care Across the Life Span

4 credits

*Prerequisite: Active and unencumbered RN license*

This course focuses on the role of the professional nurse in the health promotion of individuals and populations. Emphasis is placed on enhancing communication skills, cultural competence, and physical assessment skills for registered nurses. Care of individual patients and populations is analyzed within the context of environmental influences, social determinants of health, and culture. Students will explore the role of technology in improving access to care and optimizing health care outcomes. Students will complete a practice experience that includes a health history, a comprehensive physical assessment, a genogram, and a teaching plan on a live adult volunteer. Supporting practice experiences, such as digital clinical simulations, will be used to augment direct, hands-on practice experience. Students will purchase Shadow Health's Digital Clinical Simulations to practice and enhance clinical reasoning skills. This course includes 45 hours of practice experience.

Delivery: Online course delivered over 15 weeks.

## NUR 345 Comprehensive Healthcare Through the Lifespan

4 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical*

This course focuses on the professional nurse's role in the health promotion of individuals and populations. Emphasis is placed on enhancing communication skills, cultural competence, and physical

assessment skills for registered nurses. Care of individual clients and populations is analyzed within the context of environmental influences, social determinants of health, and culture. Students explore the role of technology in improving access to care and optimizing health care outcomes. Students complete a practice experience that includes a health history, a comprehensive physical assessment, a genogram, and a teaching plan on a live adult volunteer. Supporting practice experiences, such as digital clinical simulations, are used to augment direct, hands-on practice experience.

Corequisites: NUR 345C Comprehensive Healthcare Through the Lifespan Clinical

## **NUR 345C Comprehensive Healthcare Through the Lifespan Clinical**

**2 credits**

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical*

This clinical course provides registered nurse students with structured opportunities to apply principles of health promotion, communication, cultural competence, and physical assessment in the care of individuals and populations. Under guided supervision, students complete a comprehensive health history, physical assessment, genogram, and client-centered teaching plan with a live adult volunteer.

Emphasis is placed on understanding the impact of social determinants of health, environmental factors, and cultural influences on health outcomes. Clinical reasoning is strengthened through hands-on experiences and the use of simulations to enhance assessment and client education skills. This practice experience supports the development of the nurse's role in health promotion and prevention across diverse populations and care settings.

Corequisites: NUR 345 Comprehensive Healthcare Through the Lifespan

## NUR 350 Clinical Nursing Practicum

4 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical, NUR 345 Comprehensive Healthcare Through the Lifespan, NUR 345C Comprehensive Healthcare Through the Lifespan Clinical*

This course builds upon foundational medical-surgical nursing knowledge and focuses on the care of individuals with complex, multisystem health conditions in acute care settings. Emphasis is placed on advanced clinical judgment, prioritization, and decision-making skills using the nursing process to deliver safe, evidence-based, client-centered care.

Students analyze complex pathophysiology, advanced pharmacologic interventions, and interdisciplinary care strategies for clients with coexisting conditions. The course also explores leadership roles in clinical practice, ethical and legal considerations, and the coordination of care across transitions and settings. This course prepares students to manage increasing client acuity and complexity with competence and confidence.

Corequisites: NUR 350C Clinical Nursing Practicum Clinical

## NUR 350C Clinical Nursing Practicum Clinical

2 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical, NUR 345 Comprehensive Healthcare Through the Lifespan, NUR 345C Comprehensive Healthcare Through the Lifespan Clinical*

This clinical course provides advanced practice experiences for nursing students caring for individuals with complex, multisystem health problems in acute care settings. Students apply critical thinking

Continued on next page

and refined clinical judgment to prioritize care, manage multiple clients, and respond to rapidly changing health conditions.

Clinical experiences emphasize the integration of pathophysiology, pharmacology, and evidence-based interventions while fostering professional communication, interprofessional collaboration, and ethical decision-making. Students are expected to demonstrate increasing autonomy, leadership, and accountability in the delivery of safe, high-quality nursing care. This course prepares students for the transition to professional practice in high-acuity environments.

Corequisites: NUR 350 Clinical Nursing Practicum

### **NUR 356 Leadership and Management in Nursing**

**4 credits**

*Prerequisite: Active and unencumbered RN license*

Nurse leaders engage in ethical decision-making processes that align with organizational priorities. Leaders make a variety of strategic decisions including people management, prudent use of financial resources, and development of a vision for the organization and team. Leading a team is a complex endeavor and involves clear communication of the vision, the ability to work in inter-professional teams, a passion for the mission, the ability to make decisions under pressure and uncertainty, and the ability to motivate others to embrace the vision. This course analyzes the interrelated relationship between leadership and decision making, and examines how wisdom, research, personal values, and theory enhance leadership and decision-making skills. The course will use a mix of reading, course conversations, case studies, teamwork, and reflective exercises to explore the role of nurse leaders.

Delivery: Online course delivered over 15 weeks.

### **NUR 430 Research in Nursing**

**3 credits**

*Prerequisites: Active and unencumbered RN license, MAT 201 Statistics.*

*May be taken concurrently with MAT 201 Statistics.*

This course focuses on the role of the baccalaureate prepared nurse in translating and disseminating current evidence into clinical practice. The integration of theory, evidence, best practices, cultural considerations, and patient preferences in clinical decision making will be examined. Students will develop a basic understanding of the generation of knowledge by examining research processes and appraising the value of current evidence for practice. Course content analyzes the collaborative role of the baccalaureate prepared nurse in the inter-professional team, with a focus on improvement of patient outcomes. The Iowa Model will be used as a framework for an evidence-based practice proposal. Advocacy for the protection of human subjects in research will be emphasized, and students will evaluate ethical practices that protect patients from harm. The student will explore the impact of health care economics on research and the translation and application of research findings. The role of nurse sensitive outcomes in establishing evidence-based practice will be examined.

Delivery: Online course delivered over 8 weeks.

## NUR 443 Foundations of Nursing Research

3 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical, NUR 345 Comprehensive Healthcare Through the Lifespan, NUR 345C Comprehensive Healthcare Through the Lifespan Clinical, NUR 350 Clinical Nursing Practicum, NUR 350C Clinical Nursing Practicum Clinical*

This course focuses on the role of the baccalaureate-prepared nurse in translating and disseminating current evidence into nursing practice. The integration of theory, evidence, best practices, cultural considerations, and client preferences in clinical decision-making are examined. Students develop a basic understanding of the generation of knowledge by examining research processes and appraising the value of current evidence for practice. Course content analyzes the collaborative role of the baccalaureate-prepared nurse in the interprofessional team, with a focus on the improvement of health outcomes. Advocacy for the protection of human subjects in research is emphasized, and students evaluate ethical practices that protect clients from harm. The student explores the impact of health care economics on research and the translation and application of research findings.

Corequisites: NUR 455 Community and Public Health Nursing, NUR 455C Community and Public Health Nursing Clinical

## NUR 446 Teaching and Learning in a Diverse Society

3 credits

*Prerequisite: Active and unencumbered RN license*

This course focuses on nursing principles and concepts as applied to the promotion and preservation of the health of populations. Students participate in rich interactive activities that involve a needs assessment, community connections, cultural awareness and sensitivity, health literacy, teaching and learning, advocacy, and critical self-reflection. The course requires 20-hours of practice experience. The practice experiences include four interviews with community members and members of the Interprofessional team, completing a needs assessment for a community's learning needs, preparing a teaching plan and teaching materials, delivery and evaluating a teaching session, and writing a letter to community leaders related to an identified health need. Satisfactory performance in the practice experience of this course is required for a passing grade in the course.

Delivery: Online course delivered over 8 weeks.

## NUR 448 Community Health Nursing: Caring for the Public's Health

4 credits

*Prerequisite: Active and unencumbered RN license*

This course integrates evidence, theory, standards, and knowledge from nursing, public health, and other disciplines to guide population-focused nursing practice. Importance is placed on the application of the core functions of public health: assessment, policy development, and the assurance of available and necessary health services for diverse populations. Emphasis is placed in identifying determinants of health, advocating for vulnerable populations, prioritizing primary prevention, and utilizing available resources to improve the health of populations. Population-focused nursing involves assessing the health care needs of a specific population and making health care decisions for the population as a whole rather than for individuals. This course includes practice experiences in the community. This course includes 45 hours of practice experience.

Delivery: Online course delivered over 15 weeks.

## NUR 455 Community and Public Health Nursing

4 credits

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical, NUR 345 Comprehensive Healthcare Through the Lifespan, NUR 345C Comprehensive Healthcare Through the Lifespan Clinical, NUR 350 Clinical Nursing Practicum, NUR 350C Clinical Nursing Practicum Clinical*

This course integrates evidence, theory, standards, and knowledge from nursing, public health, and other disciplines to guide population-focused nursing practice. Importance is placed on the application of the core functions of public health: assessment, policy development, interprofessional collaboration, and the assurance of available and necessary health services for diverse populations. Emphasis is placed on identifying determinants of health, advocating for vulnerable populations, prioritizing primary prevention, empowerment, population advocacy, and utilizing available resources to improve the health of populations. Population-focused nursing involves assessing the health care needs of a specific population and making health care decisions for the population rather than for individuals.

Corequisites: NUR 443 Foundations of Nursing Research, NUR 455C Community and Public Health Nursing Clinical

## **NUR 455C Community and Public Health Nursing Clinical**

**1 credit**

*Prerequisites: ENG 101A Advanced Composition, PSY 235 Lifespan Developmental Psychology, SOC 101 Introduction to Sociology, BIO 115 Anatomy and Physiology I (NonLab), BIO 115L Anatomy and Physiology I Lab, BIO 116 Anatomy and Physiology II (NonLab), BIO 116L Anatomy and Physiology II Lab, BIO 212 Microbiology, BIO 212L Microbiology Lab, BIO 214 Nutrition, MAT 114 Intermediate Algebra, MAT 201 Statistics, BIO 213 Pathophysiology, NUR 124 Health Assessment I, NUR 124L Health Assessment I Lab, NUR 129 Fundamentals of Nursing, NUR 129L Fundamentals of Nursing Lab, NUR 129C Fundamentals of Nursing Clinical, NUR 130 Cultural Diversity in Nursing; NUR 220 Adult Complex Health I, NUR 220C Adult Complex Health I Clinical, NUR 221 Women, Children and Families, NUR 221C Women, Children and Families Clinical, NUR 222 Adult Complex Health II, NUR 222C Adult Complex Health II Clinical, NUR 326 Mental Health Nursing, NUR 326C Mental Health Nursing Clinical, NUR 345 Comprehensive Healthcare Through the Lifespan, NUR 345C Comprehensive Healthcare Through the Lifespan Clinical, NUR 350 Clinical Nursing Practicum, NUR 350C Clinical Nursing Practicum Clinical*

This clinical course provides students with experiential learning opportunities in population-focused nursing practice within community and public health settings. Under faculty and preceptor guidance, students apply principles of assessment, policy development, and interprofessional collaboration to promote the health and well-being of diverse populations.

Students engage in community-based health initiatives, conduct population health assessments, and develop interventions that address social determinants of health, health disparities, and resource accessibility. Emphasis is placed on primary prevention, advocacy for vulnerable and underserved populations, and the integration of public health functions to assure quality care at the population level. Through clinical experiences, students gain skills in program planning, health education, outreach, and evaluation to support the delivery of equitable, evidence-based public health nursing care.

Corequisites: NUR 443 Foundations of Nursing Research, NUR 455 Community and Public Health Nursing

## **NUR 462 Nursing Capstone**

**4 credits**

*Prerequisites: Active and unencumbered RN license. The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with one (1) other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Capstone course provides an opportunity for students to synthesize concepts of professional nursing, develop a quality improvement initiative, apply principles of interprofessional collaboration, and demonstrate self-development. The course is designed to help students apply leadership principles related to effective communication, collaboration, and delegation within interprofessional teams through the work done on the quality improvement initiative. This course also provides students

with the opportunity to demonstrate professional self-development through the group debriefing and self-reflection activities. The Capstone course is also designed as a culminating nursing course for the RN baccalaureate student with a practice experience component that includes 45-hours of direct practice experience (PE).

This course must be completed through Excelsior University.

This course includes 45 hours of direct practice experience. Satisfactory performance in the practice experience of this course is required for a passing grade in the course.

### **NUR 465 Pre-licensure Baccalaureate Nursing Capstone**

**4 credits**

*Prerequisites: The Capstone must be the last course taken. All Major Core and University Requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Capstone course provides an opportunity for students to synthesize concepts of professional nursing, develop a quality improvement initiative, apply principles of interprofessional collaboration, and demonstrate self-development. The course is designed to help students apply leadership principles related to effective communication, collaboration, and delegation within interprofessional teams through the work done on the quality improvement initiative.

Corequisite: NUR 465C Pre-licensure Baccalaureate Nursing Capstone Clinical

### **NUR 465C Prelicensure Baccalaureate Nursing Capstone Clinical**

**1 credit**

*Prerequisites: The Capstone must be the last course taken. All Major Core and University Requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This culminating clinical course provides students with the opportunity to integrate and apply advanced nursing knowledge, leadership principles, and professional competencies through a population- or systems-focused quality improvement project. Under the guidance of faculty and in collaboration with interprofessional teams, students complete a direct practice experience that emphasizes communication, collaboration, delegation, and systems thinking in real-world settings.

Students engage in reflective practice, group debriefing, and self-assessment activities to promote ongoing professional development. The clinical experience supports synthesis of prior learning while demonstrating readiness to contribute to practice change, lead improvement initiatives, and advance the delivery of safe, high-quality care within complex health care systems.

Corequisite: NUR 465 Pre-licensure Baccalaureate Nursing Capstone

## PHYS 201 Physics I

3 credits

*Prerequisites: MAT 116 PreCalculus Algebra, and MAT 118 Trigonometry or MAT 120 Precalculus*

This is the first course of a 2-course, algebra-based Physics sequence. The material covered in the course is divided into four conceptual areas of Physics: 1) Forces and Motion, 2) Conservation Laws, 3) Properties of Matter, and 4) Oscillations and Waves. Some of the mathematics to be applied in the course will be reviewed as needed. This course is recommended for technical coursework and careers.

PHYS 201 duplicates the Excelsior University Examination PHYx 140 Physics. Students will receive credit for either the course or the examination, as both will not be applied toward graduation.

## PHYS 202 Physics I Laboratory

1 credit

*Prerequisite: MAT 116 Precalculus and MAT 118 Trigonometry, or MAT 120 Precalculus Algebra, and PHYS 201 Physics I.*

*May be taken concurrently with PHYS 201 Physics I*

The course covers a wide range of basic topics in Physics I in a simulated laboratory setting. The activities are chosen to give students the opportunity to experiment, observe, measure, record, discover, and understand the close relationship between the experimental observations and principles under study.

## PHYS 203 Physics II

3 credits

*Prerequisite: MAT 116 Precalculus and MAT 118 Trigonometry, or MAT 120 Precalculus*

This course includes a study of electric charge, electric and magnetic forces, the electromagnetic field, light optics, and modern physics. This course is recommended for technical coursework and careers.

This course is visual and media rich. If you have any difficulties accessing any materials because of a disability, please contact [Accessibility Services](#).

## PHYS 204 Physics II Laboratory

1 credit

*Prerequisite: MAT 116 Precalculus and MAT 118 Trigonometry, or MAT 120 Precalculus Algebra, and PHYS 203 Physics II.*

*May be taken concurrently with PHYS 203 Physics II*

The laboratory covers a wide range of basic topics in Physics II. The activities are chosen to give students an opportunity to perform the experiments and record observations. In this lab students measure, experiment, observe, discover, and understand the close relationship between the experimental observations and principles under study.

## **POL 320 The Geopolitics of Energy and Global Climate Change**

**3 credits**

*Prerequisite: None*

Energy consumption is the lifeblood of the US and global economy, yet we seldom investigate the costs involved in making a gallon of gas cheaper than a gallon of milk. When you fill up your tank, have you ever wondered where the fuel comes from or what it really takes to make this necessary energy source so readily available? When you hear about costly wars, international rivalry, or domestic strife in energy-rich regions like Russia, the South China Sea, Arctic, or the Middle East, do you question how these might be related? Beyond the near constant rivalry over energy, even alternative energy technologies used in renewables, global climate change looms as an almost incalculable cost. In this course you develop a geopolitical lens onto energy and climate change by looking at powerful state, military and corporate actors, each pursuing its own, often conflicting, objectives. You examine how these actors influence geopolitics and climate change, such as with the homeland and national security implications of increased resource rivalry, sea levels, storm intensities, Arctic melt and drought. In this course you examine the political realities of energy today and the possibilities of different, more sustainable tomorrows.

## **POL 351 War and Peace After the Cold War**

**3 credits**

*Prerequisite: None*

This course analyzes key actors and trends in international relations since the end of the Cold War in 1989–1991. Explore how cooperation accompanying the end of the Cold War faded into an ‘Age of Terror’ and great power rivalry. Students look at conflict and cooperation throughout the post-Cold War period and examine important events, including: the end of the Cold War; the Balkans Wars; the rise of the interdependent global economy; Islamic Fundamentalism and the War on Terror; Russia-China-US competition emerging since 2008; and, the fate of American dominance of world politics. The course ends with the contemporary debate over America’s role as global leader amidst challenges from ascending states like China and non-state threats from terrorist groups and global health and climate dilemmas.

This course replaces POL 350. Credit for only one of these courses will be applied toward graduation.

## **PSY 101 Introduction to Psychology I**

**3 credits**

*Prerequisite: None*

In this course, students will apply psychological principles and theory to their everyday lives. In addition to foundational topics like psychology as a science, learning and memory, human development, and consciousness, they will learn about some more specific topics like stress and health, psychological disorders and therapy, and human sexuality. Concepts learned in this course can be applied in any career to better understand behavior, thought, and emotion.

## PSY 220 Psychology of Personality

3 credits

*Prerequisite: None*

This course provides an overview of personality psychology and related issues. Students will explore the history and systems of personality, analyze current theories and evidence associated with personality psychology, and learn how personality is assessed and researched. Learners examine individual differences, including the way gender, race, religion, and national origin impact personality development and expression. The course places special emphasis on personality in the work-place to help learners identify careers appropriate for their personality and better understand the traits that are highly valued by employers.

This course uses a lower cost interactive webtext instead of textbooks.

## PSY 235 Lifespan Developmental Psychology

3 credits

This course introduces the science of life span development and the concept of human growth as being a product of the interaction among biology, psychology, and environment of the individual. It examines the physical, cognitive, psychosocial, and environment factors across the life span. Students will explore, analyze, and present theories and evidence associated with developmental science from conception through death. Concepts learned in this course can be applied to any career focusing on health or human services and can help learners raise healthier children and live in more functional families.

## PSY 280 Abnormal Psychology

3 credits

*Prerequisite: None*

In abnormal psychology, students will talk, think, and share their ideas about mental health diagnoses, the cultural contexts in which they exist and are treated, and most importantly, the unique people who have them.

This course uses all open educational resources and does not require the purchase of a textbook.

## PSY 305 Research Methods

3 credits

*Prerequisite: ENG 101 English Composition I or ENG 102A Advanced Composition; MAT 201 Statistics*

During this course students will investigate how research is conducted in the social sciences. They will learn research methods and techniques that you are likely to come across in their professional and personal lives. Throughout the course, students will have opportunities to apply the different research methods and techniques that you have learned. Lastly, they will leave the course with an understanding of research methods that will give them the knowledge and skills needed to gather, evaluate, and apply information and research findings.

### PSY 330 Educational Psychology

3 credits

*Prerequisite: None*

Educational psychology is an applied field examining how learning occurs at all ages. It covers topics such as learning and cognition, cognitive development, motivation to learn, classroom management, teacher-centered and learner-centered instruction, and various contexts in which learning occurs. Students will uncover evidence-based strategies for effective teaching, learning, and assessment as well as ways to create effective learning environments. Upon completion of this course, students will be able to apply their knowledge of educational psychology to any career that involves teaching or training.

### PSY 340 Psychology of Learning

3 credits

*Prerequisite: None*

This course examines the question, “What does it mean to learn?” It provides an overview of the major theories that explain the dynamics of behavior and learning in humans and animals. It covers topics such as classical and operant conditioning, social learning, learning occurring through the media, memory, and forgetting. The focus of the course is making course concepts meaningful by helping students create connections between learning and career outcomes. The concepts learned can be applied to any career in which it is important to teach, influence, or change the behavior of self or others.

This course uses all open educational resources, and does not require the purchase of a textbook.

### PSY 360 Social Psychology

3 credits

*Prerequisite: None*

This course analyzes how people influence and are influenced by the real or imagined presence or others and how people interact with and relate to those around them. Topics include research in social psychology, social cognition, social perception and judgment, attitudes and attitude change, conformity and obedience, group behavior, attraction and intimate relationships, helping behavior, aggression, prejudice, and the application of social psychology to other fields including the legal system. The concepts learned in this course can be applied to all careers in which one works with and in teams, as well as work where it is important to influence or persuade others.

### PSY 362 Psychology of Human Sexuality

3 credits

*Prerequisite: None*

This course analyzes how people influence and are influenced by the real or imagined presence or others and how people interact with and relate to those around them. Topics include research in social psychology, social cognition, social perception and judgment, attitudes and attitude change, conformity and obedience, group behavior, attraction and intimate relationships, helping behavior, aggression, prejudice, and the application of social psychology to other fields including the legal system. The concepts learned in this course can be applied to all careers in which one works with and in teams, as well as work where it is important to influence or persuade others.

This course uses a lower cost interactive webtext instead of textbooks.

## PSY 365 Psychology of Diversity

3 credits

*Prerequisite: None*

This course introduces students to a study of understanding how people think, feel, behave, and interact within diverse social contexts. Fully understanding the psychology of diversity requires consideration of the historical, political, educational, economic, and societal factors that influence psychological processes and people's responses to diversity. Students will study both differences and similarities that are at the intersections of gender, race, ethnicity, sexual orientation, weight, age, language, veteran status, and other factors. Readings, including recent journal articles, provide a greater understanding of diversity and the interrelationship between diversity and psychology, and an appreciation for the value of diversity. Students develop a better understanding of themselves and the world around them in an appreciation for a global society. The concepts learned in this course can be applied to any career in which it is valuable to have a better understanding of how to successfully leverage the benefits of diversity.

## PSY 380 Biopsychology

3 credits

*Prerequisite: None*

This course examines how neurons work individually and together to enable behavior, feelings, and thoughts. It covers the structures and functions of the nervous system, including the biological bases of behavioral development, perception, learning, memory, cognition, motivation, language, sleep, and psychological disorders. The concepts learned in this course can be applied to any health science or human service career.

This course uses a lower cost interactive webtext instead of textbooks.

## PSY 420 Human Motivation

3 credits

*Prerequisite: None*

Motivation can be thought of as what energizes and directs human behavior. When studying motivation, researchers attempt to answer the questions: "What causes behavior?" and "What causes behavior to vary in intensity?" This course examines the major issues and theories that describe and explain human motivation across the globe. It considers behavior from biological, psychological, and social perspectives. Students will analyze and integrate information from empirical research in psychology in order to develop an understanding of motivation that is applicable to all individuals, including students' own lives. The concepts learned in this course can be applied to across a multitude of settings including leading, managing, counseling, nursing, teaching, and parenting.

## PSY 440 History and Systems

3 credits

*Prerequisite: PSY 101 Introduction to Psychology I*

This course provides an overview of historical perspectives and theoretical developments that have contributed to the modern discipline of psychology throughout the world. In addition, students will study the terminology, theoretical systems and theorists. Major perspectives will be discussed,

including Gestalt psychology, structuralism, behaviorism, psychoanalysis, and cognitive psychology. Students also study psychology of social change and the development of modern psychological branches and applications. The concepts learned in this course are particularly relevant for learners making connections across different fields and disciplines in psychology.

---

### **PUBH 301 Introduction to Public Health**

**3 credits**

*Prerequisite: None*

Public health is the science and art of protecting and improving the health of the population as a whole. This course provides students with a deeper understanding and appreciation of today's complex U.S. public health system. Students will explore the origins of the modern public health system, the contributions of public health practice, and the critical issues facing it today. Throughout the course, students will be introduced to a broad array of career opportunities and learn how these professions work together to prevent and mitigate health risks in the general public.

---

### **PUBH 302 Research Methods in Public Health**

**3 credits**

*Prerequisite: PUBH 301 Introduction to Public Health*

During this course, students will investigate how public health research is conducted. The course introduces the language of research, critical thinking in the consumption of information, and the elements of the research process within quantitative, qualitative, and mixed methods approaches. Students will complete the course with an understanding of research methods that will give them the knowledge and skills needed to gather, evaluate, and apply information and research findings to public health issues.

---

### **PUBH 303 Public Health Policy and Leadership**

**3 credits**

*Prerequisite: PUBH 301 Introduction to Public Health*

Public health policy and leadership are critical components in the field of public health, aimed at improving the health and well-being of populations. In this course, students will explore public health policy and how effective public health leadership is crucial in promoting and safeguarding communities' health. Students will explore how public health policies encompass disease prevention, health promotion, environmental health, healthcare access, and emergency preparedness. Students will examine the qualities of public health leaders in their ability to be visionary, communicate effectively, work collaboratively, make decisions, and be adaptable.

---

### **PUBH 304 Introduction to Epidemiology**

**3 credits**

*Prerequisite: PUBH 301 Introduction to Public Health*

Epidemiology is the study of the distribution and determinants of health and illness at the population level and the application of epidemiology in controlling the issue or illness. During this course, students are introduced to the basic concepts, principles, and application of epidemiology to understand procedures for studying, preventing, and controlling diseases, environmental health hazards, and accidents. Current real-world public health scenarios will be discussed and applied to the material.

### **PUBH 305 Environmental Public Health**

**3 credits**

*Prerequisite: PUBH 301 Introduction to Public Health*

This course is designed to introduce students to the basic principles of environmental health and the history and accomplishments of the field. During this course, students will explore the impact of environmental exposures on human health and the impact that humans have on the environment. Students will learn about environmental health issues and determinants of health impacting the population on a global scale. These issues include the human health effects of exposure to physical, chemical, and biological agents, the effects of indoor and outdoor pollution, the impact of climate change on human health, the global environmental burden of disease, and health equity.

### **PUBH 306 Critical Issues in Public Health**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, and PUBH 305 Environmental Public Health*

This course examines emerging population-based issues, changing public and health policies, and contemporary global health concerns. Students explore current public health issues within the context of their impact on national and global populations. Critical issues discussed include natural and man-made disasters, food and environmental safety, veterans' health, infectious and chronic diseases, human rights violations, and other public health issues.

### **PUBH 401 Biostatistics in Public Health**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

This course provides a foundational overview of statistical techniques employed in public health research. It encompasses fundamental probability theory, descriptive statistics, principles of statistical inference, regression and correlation methodologies, and analysis of variance in understanding public health research data. In this course, students will develop a proposal for a statistical analysis of a public health research topic of interest to them.

### **PUBH 402 Global Health**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

This course provides a comprehensive overview of community-level, societal, and geopolitical factors that influence global health in developing countries. Students will explore interdisciplinary perspectives of global health regarding health care systems, environmental health and disasters, trends in communicable and non-communicable diseases, and cutting-edge improvements in global health interventions. Students will examine similarities and contrasts across cultures and environment, with attention to issues of health equity and shifting ideologies in global health.

### **PUBH 403 Social and Behavioral Health**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

In this course, students will learn what social theory is and what it can and cannot do to understand human behavior. Students will develop expertise in a health behavior of interest to them and learn how to apply theory to develop interventions that can support healthier behaviors and ultimately healthier outcomes for people and communities.

### **PUBH 404 Health Disparities**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

This course provides an exploration of health disparities within the United States, focusing on the multi-faceted factors that contribute to unequal health outcomes across diverse demographic groups. Through a critical lens, students will examine the causes, consequences, and potential solutions related to health disparities. The course integrates theoretical frameworks, empirical evidence, and practical strategies to promote health equity.

### **PUBH 405 Health Education: A Cross-Cultural Perspective**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

Cross-cultural health education skills are important in public health. This course equips students with essential career competencies, including assessing educational requirements, and planning, delivering, and evaluating culturally sensitive health education for diverse populations. By applying learning theories and utilizing motivational interviewing techniques, students gain the tools to address potential barriers faced by clients. A key emphasis is on debunking common misconceptions related to health and nutrition, especially those perpetuated by media and social platforms.

### **PUBH 406 Health Promotions**

**3 credits**

*Prerequisites: PUBH 301 Introduction to Public Health, PUBH 302 Research Methods in Public Health, PUBH 303 Public Health Policy and Leadership, PUBH 304 Introduction to Epidemiology, PUBH 305 Environmental Public Health, and PUBH 306 Critical Issues in Public Health*

This course will introduce students to the professional field of health promotion and education by examining the role of health educators, the history of health education, the settings where health educators are employed, the theoretical and philosophical perspectives of health education, and the ethics of the profession. Students develop an understanding of the role of health promotion and education by assessing, planning, implementing, and evaluating health challenges that affect our communities.

## **PUBH 407 Public Health Capstone**

**4 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

In this capstone course, students synthesize academic coursework, theoretical knowledge, practical skills, and experiential learning. The primary objective is to validate their comprehensive understanding of foundational public health principles. Through a multi-component project, students demonstrate their proficiency in essential elements of public health practice and research.

## **SOC 101 Introduction to Sociology**

**3 credits**

*Prerequisite: None*

This course offers an introduction to the major concepts, theoretical perspectives, research methods, and scholars in sociology. Sociology is the scientific study of human social behavior, and this course examines several important sociological topics, including culture; socialization; deviance; social inequality; social institutions; and social change. This course also explores various socio-historical and socio-cultural frameworks across the world, promoting an appreciation for unique cultural identities and institutions. Students will improve their analysis, understanding and interpretation of contemporary social issues in this rapidly changing world. This course encourages the practical understanding of sociology through exploration of students' everyday social world, and the often invisible and taken-for-granted social forces that shape it.

## **SOC 240 Addictions In America**

**3 credits**

*Prerequisite: None*

This course helps students develop a greater understanding of a variety of addictions. Using an ecosystems approach, the addictive process and recovery will be studied, including the reciprocal interaction between addicted individuals and their various social systems. Students will examine substance abuse and behavioral compulsions in considerable detail with a focus on addiction in various populations as well as the business of drugs and prevention. Attention will be given to the biological and genetic factors in the etiology of addiction, family issues, and community responses. The consequences of addictions will be studied at the individual, family, and community levels. This course draws on current research in the field of addictions, and emphasizes critical analysis of contemporary controversies. This course builds on the foundations of health and human services knowledge and skills to help students better understand this complex problem affecting American society.

This course was cross-listed with HSC 240. Credit for only one of these courses will be applied toward graduation.

---

**SUST 300 Humans, Health and the Environment: A One Health Approach** **3 credits**

---

*Prerequisite: Minimum age of 18.*

Embark on an unparalleled hybrid learning journey with this course tailored for individuals passionate about health, nature, and environmental interactions. Designed for health professionals and environmental enthusiasts alike, this course delves into the One Health approach through a blend of online coursework and a robust weeklong field experience at Paul Smith's College in the Adirondack Mountains. Paul Smith's College's bucolic campus provides an ideal setting for exploring the complex relationships between human, animal, and environmental health.

---

**TECH 180 Personal Protection Equipment for Electrical Work** **3 credits**

---

*Prerequisite: None*

This course focuses on instrumentation, temperature, pressure, and flow measurements, transducers, pneumatic and hydraulic systems, programmable logic controllers, and process control. Students explore the characteristics and operations of various types of transducers and measuring instruments. The curriculum also covers the importance of system models and their relationship to process control. Students gain practical experience and a thorough understanding of how these elements integrate within industrial settings. By Using the knowledge acquired in this course, students can select and adopt safety procedures and tools and communications protocols appropriate to the environment to ensure electrical and fire safety at worksites.

---

**TECH 185 Blueprint Reading** **3 credits**

---

*Prerequisite: None*

This course introduces blueprints, facility floor plan diagrams, and blueprint components. In the classroom portion, students will learn to interpret blueprints and facility diagrams. In the simulation component, learners will practice reading blueprints for lockout/tagout (LO/TO) procedures, utilize LO/TO practices, and apply and verify LO/TO protocols. Hands-on experience using Wisc-Online equips students with essential skills for maintaining safety and compliance in industrial environments.

---

**TECH 200 Technical Writing** **3 credits**

---

*Prerequisite: ENG 101 English Composition or ENG 101A Advanced Composition*

This course introduces students to effective technical approaches in written and digital communications, including email, presentations, technical reporting, and technical instructions. This course will introduce students to writing technical problem statements, presenting information to target audiences, conducting research with proper citation, preparing written arguments, and written exercises in voice, tone, and style for the technologist.

### **TECH 225 Applied Instrumentation and Control**

**3 credits**

*Prerequisites: PHYS 203 Physics II and PHYS 204 Physics II Lab; MAT 114 Intermediate Algebra or MAT 120 Precalculus; ELEC 152 Circuit Theory I and ELEC 153 Circuit Theory II or NUC 255 Electrical Theory*

This course focuses on instrumentation; temperature, pressure, and flow measurements; transducers; pneumatic and hydraulic systems; programmable logic controllers; and process control. In this course the students will have the opportunities to explore the characteristics and operations of different types of transducers and measuring instruments. The importance of system models as well as their relationship between process control will also be covered in this course.

### **TECH 230 Technology and Society**

**3 credits**

*Prerequisite: None*

This course considers technological change from historical, artistic, and philosophical perspectives and its effect on human needs and concerns. Emphasis is placed on the causes and consequences of technological change and the evaluation of the implications of technology. Upon completion, students should be able to critically evaluate the implications of technology upon society.

### **TECH 231 Navigating Technology: Concepts, Roles, and Careers**

**3 credits**

*Prerequisite: TECH 230 Technology and Society*

This introductory course serves as a gateway for students to explore the dynamic and interconnected fields of information technology (IT), cybersecurity, and computer science. Building upon foundational concepts of technology and society, this course provides an understanding of the distinctive roles each field plays in shaping our digital world as well as a hands-on introduction to common tools used in each field. Emphasizing the unique elements within each discipline, the course offers insights into the exciting and diverse landscape of information technology, cybersecurity, and computer science.

### **TECH 233 Electrical Power Distribution**

**3 credits**

*Prerequisites: PHYS 203 Physics II and PHYS 204 Physics II Lab; MAT 114 Intermediate Algebra or MAT 120 Precalculus; ELEC 152 Circuit Theory I and ELEC 153 Circuit Theory II or NUC 255 Electrical Theory*

This course provides students a comprehensive overview of commercial Electrical Power Distribution. Students examine power system flow dynamics along with those elements and facilities associated with electrical power generation, its transmission, and subsequent distribution to gain a working understanding of Electrical Power Distribution. Additionally, students assess frameworks associated with economic, regulatory, and energy accounting practices to gain in depth understanding of how and why telemetry, communication, and control requirements are vital to maintaining electrical power system stability and reliability.

### **TECH 240 Job Task and Troubleshooting**

**3 credits**

*Prerequisites: TECH 180 Personal Protection Equipment for Electrical Work , TECH 185 Blueprint Reading*

This is a course to introduce troubleshooting and safety strategies that enable students to solve problems in a safe, cost-effective and timely context and apply appropriate troubleshooting strategies when repairing electrical equipment. In simulation part of the course, the learner will perform hazard analysis, read blueprint, inspect work areas, select LO/TO equipment, troubleshoot and repair electrical equipment.

### **TECH 250 Renewable Energy Overview I: Solar and Geothermal**

**3 credits**

*Prerequisite: None*

This course provides an overview of Solar (Photovoltaic) energy, Solar Thermal energy, and Geothermal energy. It also covers green building technologies, focusing on sustainable systems design. The political, economic, and environmental impacts of these renewable energy sources will be discussed, offering a comprehensive understanding of their role in the modern energy landscape. By the end of the course, students can evaluate the effectiveness and impact of solar and geothermal energy solutions in various contexts.

### **TECH 251 Renewable Energy II: Wind And Water**

**3 credits**

*Prerequisite: None*

This course offers an overview of wind energy and water energy for both commercial and non-commercial applications, including sustainable system design and green building technologies. The course also explores the political, economic, and environmental impacts of wind and water energy, providing a thorough understanding of these renewable energy sources, providing students with the knowledge and skills to assess the viability and impact of wind and water energy systems in different applications. By the end of this course, students can explain the energy conversion process to extract useful power from bioenergy, wind and hydro systems and can also explain sustainable design and construction relating to bioenergy, wind and water for commercial and non-commercial use.

### **TECH 260 Energy Industry Fundamentals**

**3 credits**

*Prerequisite: None*

The Energy Industry Fundamentals course provides students with a comprehensive understanding of the energy industry. Aligning with tiers 4 and 5 of the Energy Competency Model developed by the Center for Energy Workforce Development (CEWD) and the U.S. Department of Labor, this course covers emerging principles and concepts impacting the energy industry, compliance with safety and health procedures, and the workings of electric power and natural gas generation, transmission, and distribution. Additionally, it explores various entry-level energy careers and current hot topics in the energy sector. The course prepares students for the CEWD Energy Industry Fundamentals certificate exam. By the end of the course, students can distinguish various electric power generation equipment, technologies, and systems, and understand energy-related career requirements.

### **TECH 290 Integrated Technology Assessment AAST**

**3 credits**

*Prerequisite: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with one (1) other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The Associate in Applied Science in Technology capstone course provides an online portfolio development experience, requiring students to reflect on their past academic and professional experiences. Students learn how to develop an online portfolio and compose learning statements supported by documented evidence that demonstrates the achievement of program outcomes. Throughout the course, students compile appropriate evidence and create an Integrated Technology Management Assessment report. This report demonstrates their mastery of core competencies, reflects on their learning experiences, and effectively showcases their skills and knowledge to potential employers.

### **TECH 330 Economic Analysis for Technologists**

**3 credits**

*Prerequisite: MAT 114 Intermediate Algebra or MAT 120 Precalculus.*

This course equips students with essential economic analysis tools for effective project management, preparing them to integrate economic considerations into their engineering practices for cost-effective and efficient project outcomes. Combining theory and practice, key concepts covered include the time value of money, spreadsheet functions for calculations, cost-benefit analysis, present worth analysis, annual worth analysis, rate of return, project evaluation, breakeven analysis, and inflation. The course emphasizes the importance of economic decision-making in engineering. Students learn to perform economic evaluations, understand the impacts of inflation, depreciation, and taxes, and manage risks and uncertainties. They apply economic principles to engineering problems, make informed financial decisions, and effectively communicate results. Upon completion of this course, students know how to apply economic analysis techniques to evaluate the economic feasibility of engineering projects, accounting for various effects such as inflation, depreciation, and taxes.

### **TECH 340 Introduction to Energy Utilization**

**3 credits**

*Prerequisite: None*

This course explores how supply and demand dynamics shape the energy sector nationally and globally. Students critically examines economic, political, environmental, and social factors influencing technological advancements in energy, highlighting how access to resources and economic volatility impact how individuals and societies value and use energy resources. This systemic analysis provides students with a deep understanding of the multifaceted factors driving energy decisions and their broader implications. Upon completion of this course, students develop the ability to analyze the factors that shape the energy sector nationally and globally, as well as explain how variations in economic, political, environmental, and social factors affect technological advancements related to the production, transmission, and consumption of energy.

## TECH 490 Technology Management Capstone: Integrated Technology Assessment (ITA)

---

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The capstone can be paired with 1 other course that is considered to be general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

This course is an online portfolio development experience that requires students to reflect on their past academic and professional experiences and use the information gained from this reflective exercise to develop learning statements related to the Bachelor of Professional Studies (BPS) in Technology Management degree outcomes. The learning statements must be supported by documented evidence that demonstrates that the outcomes have been met. Students learn how to develop an online portfolio during the first module of the course and then work under the guidance of a faculty mentor during the remainder of the semester to compose learning statements, compile appropriate evidence, and create the Integrated Technology Assessment report.

## Graduate Courses

### **ACC 500 Accounting for Managers**

**3 credits**

This course is intended to help the student understand how to analyze a company's basic financial statements and annual report. By the end of the course, you should be familiar with the four basic financial statements, some of the key accounts on the balance sheet as well as the overall accounting cycle. As a manager, you should be able to effectively analyze a company's financial statements and annual report. Additionally, managers should be able to conclude on a company's profitability, efficiency, liquidity and solvency.

### **ACC 504 Corporate Financial Reporting and Disclosure**

**3 credits**

The course will cover an in depth examination of financial report disclosures, with an emphasis on how firms use financial reporting to achieve such ends as managing earnings or keeping debt off of the balance sheet. By the end of the course, students will have an appreciation for what information is missing from the primary financial statements, the knowledge to understand the content of important footnotes, and the tools to conduct financial analyses using the information contained therein. The course will use a combination of textbook problems, case studies, and most importantly, actual financial report disclosures. The course is geared for students going into public accounting, investment banking, equity research, or consulting.

### **ACC 505 Financial Statement Analysis**

**3 credits**

*Prerequisite: BUS 500 Accounting for Managers*

Are you interested in following economic and industry trends as it relates to company performance, analyzing financial statements in light of company strategy and external factors, building financial models to value a company and writing investment recommendations? If so, you will find this course interesting and useful. This course starts with an overview of financial reporting and ends with various approaches to valuation including cash flow, earnings, and market based methods. The core of this course is about gathering, analyzing, and using information to make informed decisions. While there is certainly no one set approach to financial statement analysis and valuation, one popular method is to use a top down valuation approach, which is what will be focused on in the course.

### **ADR 670 Conflict Management and Alternative Dispute Resolution**

**3 credits**

This course provides an introduction to the human resource field of conflict management and alternative dispute resolution through case analyses. You will examine the major causes of conflict, the effects of personality and perception on conflict, and recommended strategies to manage the conflict in organizations. Learn about your own styles for managing conflict and develop competency in interaction with other styles.

Cross-listed with BUS 670.

### **ADR 671 Mediation**

**3 credits**

The ability to work toward a consensus and reduce potential conflicts in a variety of contexts is of utmost importance in today's society. This course provides an overview of mediation processes. You will learn a variety of communication and negotiation skills in order to settle disputes outside of a courtroom setting. Working collaboratively, you will also create an operations plan for a mediation center, and make recommendations about the type of center for your assigned state.

Cross-listed with BUS 671.

### **BUS 500 Accounting for Managers**

**3 credits**

This course is intended to help the student understand how to analyze a company's basic financial statements and annual report. By the end of the course, you should be familiar with the four basic financial statements, some of the key accounts on the balance sheet as well as the overall accounting cycle. As a manager, you should be able to effectively analyze a company's financial statements and annual report. Additionally, managers should be able to conclude on a company's profitability, efficiency, liquidity and solvency.

### **BUS 501 Business Communications**

**3 credits**

This course focuses on the development of clear written and oral communication skills. It examines a variety of communication techniques, formats, and processes for sharing organizational information. The course explores the use of audiovisual and electronic media to enhance the quality of presentation and communication.

### **BUS 502 Global Business Environment**

**3 credits**

This course examines the global business environment and its impact on an organization's business strategy and decision making. It focuses on the complexities and risk/reward assessments that arise due to highly diversified markets, cross cultural issues, globalization, international organizations (WTO, IMF, World Bank, etc.), nongovernmental organizations (NGOs), foreign direct investment, and currency risk challenges.

### **BUS 504 Human Resource Management**

**3 credits**

This course will provide students with an understanding of the evolution and roles of human resource management in organizations, as well as an overview of the basic functions of HR management. These functions include: staff planning; recruitment and selection; job analysis and design; performance management; labor relations and laws; training and development; compensation and rewards; HR strategy; strategic, corporate, and HRM objectives; HRM policies, practices and leadership behavior; employee involvement; diverse workforces; the impact of globalization; and HR's role in change management and internal consulting. This is a 3-credit course, requiring a minimum of 18 hours of course engagement each week in an 8-week term, or 9 hours per week in a 15-week term (refer to the Credit Hours Calculation Policy in the Student Handbook), Course engagement includes

such activities as discussions, reading, study time, and assignments. Textbooks are generally not required for this course. However, course materials may update in a given term prior to registration opening. Students should therefore always review course material requirements and associated costs at our bookstore for the term in which they are registering.

### **BUS 505 Finance**

**3 credits**

What projects should an organization invest in? Where will an organization obtain finance to pay for investments? How will an organization manage day-to-day financial activities such as cash collections and payments? The purpose of this course is to provide students with an overview of the problems facing financial managers in an uncertain world. It is intended to develop students' critical thinking and problem solving competencies in financial statement analysis, capital structure, and capital budgeting. The course is focused on applying financial theory to analyze real life situations with students placed in the role of a financial manager making decisions in an uncertain environment with an incomplete data set.

### **BUS 506 Marketing**

**3 credits**

This course presents a systematic framework for understanding marketing management and strategy. It focuses on creating and executing marketing strategies and policies and examines the ethical, legal, social, and environmental issues relevant to the development of sound marketing strategies and policies.

### **BUS 509 Resilient Leadership and Organizational Behavior**

**3 credits**

This course equips students with the knowledge and skills to navigate dynamic organizational environments through resilient leadership. Participants evaluate resilient leadership theories, formulate strategies for fostering workplace resilience, and analyze case studies to discern their impact on organizational culture and performance. The course emphasizes creating innovative solutions, applying resilient leadership for positive organizational change, and synthesizing research contributions to scholarly discourse and practical applications. Additionally, students develop a comprehensive resilience plan, integrating leadership principles to fortify organizations in ever-evolving contexts. This holistic exploration prepares leaders to thrive in dynamic professional landscapes.

### **BUS 510 Health Care Policy, Politics, and Power**

**3 credits**

This course examines the critical role of health care leaders in the policy making arena. Students examine the federal policy making process, key issues in health policy, and the roles power and politics play in policy development and implementation. Students explore health care reforms and efforts to respond to disparities in health outcomes for vulnerable populations.

BUS 510 is cross-listed with HSC 510. Students in the business degree should register for the BUS version of this course, and health science degree students should register for the HSC version of this course. Students may not take both versions of the course and have the credit count toward graduation.

### **BUS 512 Compensation and Benefits**

**3 credits**

This course studies the total rewards provided to employees in return for their contributions to an organization, investigates its strategic and tactical aspects, and examines current issues with compensation and benefits. The principles of modern compensation and benefits are considered from legal, practical, and theoretical perspectives. Students will examine how compensation and benefits can add strategic value by aligning total compensation with organizational goals and investigate the challenges facing organizations operating on a global scale.

### **BUS 514 Employment Law**

**3 credits**

Each year, the Equal Employment Opportunity Commission (EEOC) reports the number of complaints of harassment and discrimination they received due to protected categories, including: national origin, race/color, sex, genetic information, sexual harassment, age, disability, pregnancy, and retaliation. These complaints were not able to be successfully resolved by employers. This course explores the way legislation directs and regulates the relationship between an employer and employee. Students will examine how legal principles relate to the organizations in which employee's function. In addition, this course will address legal issues in non-for-profits and entrepreneurial firms. Students will also learn how to investigate complaints properly, as well as engage in preventative measures for harassment and discrimination.

### **BUS 515 Labor Relations and Conflict Management**

**3 credits**

This course explores the complex relationship among management, unions, and employees in the workplace. The course will concentrate on the behavioral and organizational issues that arise in the often-contentious environment of a unionized workplace. Students will study and learn the general nature of labor relations. This will include the historical, legal, and structural environments that have greatly influenced contractual management; the negotiation, administration, and major contents of labor relations documents; struggles and disputes between labor and management; and the various tools and mechanisms to resolve these conflicts.

### **BUS 516 Communication Strategy for the Health Care Leader**

**3 credits**

Highly effective leaders must be excellent communicators; building a communications toolkit is essential. This course equips students with health communication strategies for use with a variety of stakeholders within and outside of the health care system. Students examine a variety of communication contexts, including communication management, intercultural and intergenerational communication, and health campaign messaging. Evolving communication technologies are explored. Students apply what they have learned by developing a communication strategic plan.

BUS 516 is cross-listed with HSC 516. Students in the business degree should register for the BUS version of this course, and health science degree students should register for the HSC version of this course. Students may not take both versions of the course and have the credit count toward graduation.

### **BUS 517 Employee Staffing and Development**

**3 credits**

This course covers key principles and practices in staffing and employee development. The course focuses on the interdependence of effective organizational performance with proper staffing, including recruiting and selection functions and proper assessment of personnel and employment training involved in human resource management.

### **BUS 520 Operations Management**

**3 credits**

*Prerequisite: IND 503 Data Driven Decision Making*

This course provides a managerial focus on the fundamental understanding of manufacturing and service operations and their role in the organization, with special emphasis on international dimensions. Topics include, but are not limited to: process flow analysis, inventory management, capacity planning, logistics, facilities location, supply chain management, total quality management, human resource management, technology management and manufacturing and service strategy. The course is integrative, and emphasizes the fit and relationship of operations with other functions of the firm.

### **BUS 521 Operations and Project Management**

**3 credits**

Students learn about advanced project management principles and develop schedules focusing on key concepts. The emphasis is on applying operations strategies for optimal processes, resource use, and efficient supply chains to enhance organizational performance. Through advanced techniques, students navigate project and operational risks for successful outcomes. Quality management, including Six Sigma methodologies, ensures high-quality deliverables. The course incorporates data analytics and quantitative methods for informed decision-making, utilizing KPIs to measure and improve performance. Essential team management skills, team development, conflict resolution, and effective project communication tools are integral components. This learning experience equips students for success in the dynamic fields of operations and project management.

### **BUS 522 Global Operations and Supply Chain Management**

**3 credits**

Global Supply Chain/Operations Management is one of the core courses required for MBA learners. The purpose of this course is to provide a fundamental understanding of manufacturing, distribution, inventory and service operations, and their role within the organization. The course will survey a wide range of operations topics, including process flow analysis, inventory management, capacity planning, logistics operations, supply chain management, quality in operations, project management, manufacturing, distribution, and service operations. The course will deal with these topics through a managerial, applications-oriented perspective, with special emphasis placed on the international dimension of operations. Students will work on a team and solve practical operations management issues involving cutting edge technology that will be relevant to them in the years to come. This course is forward-looking and will give students a chance to use their imagination for the good of customers and at the same time help their business reach people all over the world.

### **BUS 524 Corporate Finance and Accounting**

**3 credits**

This comprehensive course equips participants with the essential skills for strategic financial decision-making. Through a blend of theoretical understanding and practical application, participants learn to conduct financial analyses that integrate accounting and auditing, ensuring accurate and transparent reports. The course delves into optimizing capital structures, incorporating auditing principles to assess the impact of financing options on financial health. Participants gain proficiency in analyzing a firm's performance using financial statements and explaining complex financial transactions such as mergers, leverage buyouts, and divestitures of assets. Moreover, the course focuses on the development of integrated financial plans, incorporating accounting, auditing, and forecasting for informed and strategic decision-making.

### **BUS 526 Strategic Management of Health Care Organizations**

**3 credits**

This course explores theories and principles underlying strategic planning specific to health care environments. Through case study analyses, students learn strategies on how to position health care organizations in order to sustain a competitive advantage in a volatile reimbursement-driven industry. Some of the topics covered in this course include strategic positioning, strategies of mergers and acquisitions, and competitive advantage and profitability.

BUS 526 is cross-listed with HSC 526. Students in the business degree should register for the BUS version of this course, and health science degree students should register for the HSC version of this course. Students may not take both versions of the course and have the credit count toward graduation.

### **BUS 530 Project Management Principles and Application**

**3 credits**

This course covers the key components of project management process including effectively defining the project, identifying the scope, project lifecycle, communication, planning, performing, and controlling the project. Case studies and a final project are used to examine best practices, including risk assessment.

### **BUS 532 Ethical Risk Management and Compliance**

**3 credits**

Businesses face various risks, including financial, operational, strategic, compliance, and reputational risks, in this volatile and unpredictable world. The goal of risk management is not only to minimize the negative impact of potential threats but also to capitalize on opportunities that may arise. This course provides a comprehensive exploration of ethical risk management and compliance in the business context. Participants apply ethical theories and frameworks to navigate complex business scenarios, ensuring adherence to laws, regulations, and industry standards. The course emphasizes the development of ethical expectations, policies, and procedures to foster an organizational culture of ethical awareness and compliance. Participants also learn to prioritize ethical conduct in managing stakeholder relationships and effectively navigate complex, global business interests. Furthermore, the course equips individuals with the skills to apply risk mitigation techniques, establishing a resilient organizational framework that places a premium on ethical conduct and compliance.

### **BUS 540 Strategic Management of Innovative Technology**

**3 credits**

Examines theories and methods to prepare managers to handle strategic issues related to the effective management of innovative technologies. Explores the principles of strategic management with direct application to technology. Integrates: strategy setting, implementation and assessment; historical cases of business innovation through a maturation lifecycle; and application of lessons learned in contemporary business cases.

### **BUS 545 Social Media: Marketing**

**3 credits**

This course will develop the students' ability to strategically create and implement an effective social media marketing campaign. Focus will be placed on fully understanding and integrating appropriate social media tools for supporting and improving the effectiveness of organizations marketing and communicational processes. Students will examine social media in the context of advertising, marketing, and public relations. Practical applications will be explored to assess the impact of social media technologies on appropriate constituencies and/or organizational cultures.

### **BUS 550 Contingency Planning**

**3 credits**

This course examines the planning process in organizations to continually confront the unlikelihood of a disaster causing an unexpected interruption of normal operations. Specifically, it provides an overview of the key elements and strategies of implementing a crisis management program within an organization. Undertaking a business function analysis approach, students will be able to define anticipated consequences when a disruption of normal organizational operations occurs and develop a recovery plan built around desired outcomes.

### **BUS 552 Leadership**

**3 credits**

Focuses on the leadership process within the broad context of organizational dynamics. Explores leadership from four different perspectives: the leader; the follower; the situation; and leadership skills. Theories, concepts and models are applied to workplace situations.

### **BUS 553 Organizational Behavior**

**3 credits**

This course provides an overview of the principles of organizational behavior using evidence-based practice. You will discover how individual differences impact organizations (including your own), learn how to apply management and leadership skills to specific situations, apply proper business ethics to situations, and examine how culture plays a role in today's global business world. In the final assignment you will practice how to present a portfolio worthy solution proposal to the key stakeholders in an organization.

### **BUS 554 Change Management**

**3 credits**

A study of the process of change and change management. Focuses on the types of changes that take place within organizations, identifying the key issues and challenges associated with each type of change. Uses macro and micro tools for working with change, including management skills and styles, communications patterns, and force-field and gap analysis.

---

**BUS 561 Virtual Training and Development****3 credits**

This course provides an overview of facilitating training programs in a virtual environment. It addresses adult learning principles involved in the design of virtual training, strategies for engaging employees during training, the use of training methods for synchronous and asynchronous learning, and ways to assess the effectiveness of the training program.

---

**BUS 562 Virtual Team Management****3 credits**

This course provides an overview of managing virtual teams, including managing global teams. It addresses conflict management, performance issues, knowledge sharing, and data analytics for virtual teams.

---

**BUS 563 Data Analytics****3 credits**

This course provides students with an understanding of how data analysis enables companies to be more competitive. Students apply data analysis techniques to assess how organizations can integrate data analysis throughout operations to improve organizational decision making. Case studies and the introduction of relevant tools will be used to demonstrate the application of data analysis to improve organizational operations.

---

**BUS 564 Big Data and Visualization****3 credits**

*Prerequisites: IND 503 Data Driven Decision Making (for MS in Organizational Leadership) and BUS 563 Data Analytics (for both MS in Organizational Leadership and Graduate Certificate in Data Analytics)*

This course introduces students to the impact of big data on various industries. Students will explore the growth of data via the Internet of Things (IoT) and will explore various strategies being used within industry to utilize data to improve decision making. Through case analysis, students will assess how big data, machine learning and artificial intelligence are impacting organizations and how these organizations are developing strategies to capitalize on the opportunities presented.

---

**BUS 570 Information Technology****3 credits**

This course examines the strategic, operational, and ethical uses of information technology. It explores global and electronic markets and data management, and it examines how IT can support customer and supply chain management.

---

**BUS 572 Technology and Project Management****3 credits**

In the employment market, many projects are controlled by the professions of Engineers, Architects, Construction Managers, and Lab Scientists. These conditions leave a massive opportunity for MBA-level employees. That role is in planning Information Technology projects. This course explores the use of project management methods and processes applied to Information Technology management, maintenance, and innovation. Students will examine MBA-level managers' roles as stakeholders,

subject matter specialists, end-users, business analysts, and project managers. The course examines the challenges of managing current organization technology platforms, replacement through product choices and new implementations, and opportunities for innovation—issues of strategy, change, risks, and ethics.

### **BUS 573 Strategic Brand Marketing**

**3 credits**

This course provides students with insights and strategies for positioning their organizations and its associated products and/or services in highly competitive consumer and B 2B markets. Topics include customer loyalty, branding, pricing, promotion, digital marketing, marketing information systems, sales structures and compensation, industry marketing, marketing communications, lead management, and marketing campaign strategy.

### **BUS 596 Strategy and Entrepreneurial Innovation**

**3 credits**

In this course, students acquire the skills to formulate strategic decisions aligned with organizational goals and responsive to dynamic market conditions. Emphasizing innovation and creative thinking, the course fosters a transformative culture, enabling students to apply effective strategies for organizational change and successful plan execution. Students gain the ability to identify opportunities for innovation and business growth in dynamic markets and execute global strategies for expanding market presence and achieving international outcomes. This comprehensive approach prepares them for leadership roles in evolving business landscapes, emphasizing sustainability and strategic decision-making.

### **BUS 670 Conflict Management and Alternative Dispute Resolution**

**3 credits**

This course provides an introduction to the human resource field of conflict management and alternative dispute resolution through case analyses. You will examine the major causes of conflict, the effects of personality and perception on conflict, and recommended strategies to manage the conflict in organizations. Learn about your own styles for managing conflict and develop competency in interaction with other styles.

Cross-listed with ADR 670.

### **BUS 671 Mediation**

**3 credits**

The ability to work toward a consensus and reduce potential conflicts in a variety of contexts is of utmost importance in today's society. This course provides an overview of mediation processes. You will learn a variety of communication and negotiation skills in order to settle disputes outside of a courtroom setting. Working collaboratively, you will also create an operations plan for a mediation center, and make recommendations about the type of center for your assigned state.

Cross-listed with ADR 671.

---

**BUS 696 Organization Leadership, Technology and Analytics Capstone** **3 credits**

---

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the Capstone. Students can only take an elective or concentration course with the Capstone.*

This course allows students to showcase and apply their skills in organizational leadership, technology, and analytics to a real-world scenario. It will culminate in a final project that assesses all program learning outcomes and allows the student to showcase their work in an employer-focused e-portfolio.

---

**BUS 697 Human Resource Management, Diversity and Technology Capstone** **3 credits**

---

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the Capstone. Students can only take an elective or concentration course with the Capstone.*

In this course, students will apply the advanced theoretical and practical knowledge attained throughout the master's in human resource management program. Students will also demonstrate their understanding of the legal and human resource dimensions of organizations, including distributed workplaces, through analysis as well as the integration of communication and leadership skills for remote employees. This capstone course provides opportunities to define, analyze, and apply human resource theories and models to resolve complex organizational problems, and students learn strategic objectives to enhance organizational performance.

---

**BUS 698 MSM Capstone** **3 credits**

---

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the Capstone. Students can only take an elective or concentration course with the Capstone.*

This is the Master of Science in Management (MSM) Capstone course. It integrates previous study and various management disciplines to formulate, analyze, and implement effective management strategy. Students will analyze complex management situations to make strategic decisions under conditions of uncertainty.

---

**BUS 699 MBA Business Strategy Capstone** **3 credits**

---

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the Capstone. Students can only take an elective or concentration course with the Capstone.*

MBA capstone course. Integrates previous study and various business disciplines to formulate, analyze, and implement effective business strategy. Students will analyze complex business situations for making strategic decisions under conditions of uncertainty.

---

**CBC 600 Implications of Legalization of Cannabis: Policy and Compliance** **3 credits**

---

In this course, you will learn how cannabis legalization has had an impact on various institutions, entities, and individuals while also exploring the dilemmas between policy and legal regimes. You will examine the importance of compliance, how to create standard operating procedures and employee training, and how to develop a community plan. You will also participate in the

development of a class wiki that will serve as a valuable resource that you will take with you at the conclusion of the course. Lastly, you will compile your work into an electronic portfolio that you can use to present to prospective employers.

### **CBC 601 Complexities of Cannabis as Commerce**

**3 credits**

In this course you will look at the national and local, laws and regulations that have shaped the current legalized cannabis industry. You will also study existing cannabis tax schemes, assess their impacts on businesses and effectiveness in meeting individual cannabis program goals, and suggest improvements, as well as develop strategies for businesses and governments to plan for and meet shifting tax burdens. You will then analyze economic, legal, and public health implications of traceability and transport of cannabis and cannabis industry supporting products. You will explore how raw materials and products are traced through the supply chain, and what kind of technology is required to do so.

### **CBC 602 Risk Assessment in Cannabis Control**

**3 credits**

In this course students will explore the tensions between taxation and profitability, public safety, diversion, patient access, and community integration along with advertising, marketing, sales, consumer use, and social equity. The student will learn through various stakeholder lenses such as regulators, operators, and consumers. Students will also identify risks associated with technology and data standards, and risks associated with various components of the supply chain.

### **CYS 500 Foundations of Cybersecurity**

**3 credits**

This course provides students with the knowledge and tools necessary to research and identify cybersecurity threats and take action to minimize, mitigate, or eliminate them. Course topics include continuous training within organizations and the company-wide impact of cybersecurity. By participating in this course, students gain practical skills in threat identification and response, as well as an understanding of the importance of ongoing cybersecurity education.

### **CYS 503 Communications and Network Security**

**4 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course is an introduction to network security fundamentals, security policies, networking threats, and technologies. Design and implementation of secure communications networks, network management, and network scanning are covered. Technical topics include device hardening, encryption, proxies, firewalls, VPN and remote access design, NAT, DHCP, VoIP and other network design considerations. Students learn how to implement a security plan, itemize security threats, and list the elements of security in networked and mobile systems. Honeypots, sinkholes, and other network defenses are examined.

### **CYS 504 Network and Communication Security**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course introduces students to network security fundamentals, organized into four parts. The first part covers the basics of private key and public key cryptography, including common encryption algorithms such as AES, RC 4, and RSA. The second part builds on cryptography to design secure protocols for confidentiality, authentication, and data integrity, with examples like IPSec, SSL/TLS, and VPNs. The third part examines how cyber attacks proceed from reconnaissance to exploits and intrusions, with an emphasis on web attacks (such as phishing, SQL injection, and drive-by downloads) and malware. The final part focuses on intrusion prevention, detection, and response, covering firewalls, spam filters, intrusion detection systems, and risk management. Students learn protocols for secure communication over unsecure networks and modern technologies for protecting computers from various threats. Real-world cases are discussed, and students gain hands-on experience utilizing lab environments. Note, students registering for this course are assessed a course resource fee.

### **CYS 522 Advanced Networking**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course builds on the basic networking concepts and focuses on several advanced networking topics including wireless and mobile networking, near field communications, RFID (Radio Frequency Identification) and the use of cryptography and encryption in data transmission and networking. This course will also discuss privacy and security issues related to the use of these networking technologies.

### **CYS 523 Software and Application Security**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course teaches secure programming techniques by focusing on foundational defensive strategies, cutting-edge protection methods, and security features for use in the development process. Critical skills covered include identifying security defects in code, fixing security bugs using secure coding techniques, incorporating security into the development process, and using open-source tools to test applications. The course also addresses design flaws in existing software packages. By participating in this course, students gain the knowledge and skills necessary to develop secure software and enhance the security of existing applications.

### **CYS 526 Cyber Attacks and Defense**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course investigates security issues, vulnerabilities, and mechanisms to identify, respond to, and prevent cyberattacks while building active defense systems. Students follow formal ethical hacking methodology, which includes reconnaissance, scanning and enumeration, gaining access, escalation of privilege, maintaining access, and reporting. Assignments in a laboratory environment provide

students with hands-on experience on these topics. By participating in this course, students gain the skills necessary to become proficient in ethical hacking and cybersecurity defense. This course prepares students for CompTIA CYSA+ certification. Note, students registering for this course are assessed a course resource fee.

Students registering for this course will be assessed a course resource fee.

### **CYS 528 Legal Compliance Issues in Cybersecurity**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course examines the ethical, legal, and regulatory compliance issues related to the practice of cybersecurity. Topics include data protection, due diligence, privacy laws, fraud and risk management, intellectual property, IT auditing, and ethical corporate codes of conduct. This course highlights the importance of comprehending the current legal landscape and keeping abreast of new laws and regulations, along with auditing frameworks, to minimize the risk of legal liabilities. Students learn key mandates and laws in cybersecurity, the IT audit process, and techniques to minimize liabilities and reduce risks from electronic and physical threats.

### **CYS 545 Security Policy and Compliance**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course focuses on security policy and compliance in cybersecurity, including legal, ethical, privacy, and governance issues. Students explore national and international policies, and gain understanding of the importance of security policy as the foundation of any security program in organizations. The course examines theory and principles by critiquing policy documents and discussing compliance issues and frameworks. Throughout this course students learn approaches to analyze and write security policies with a focus on compliance.

### **CYS 555 Cybersecurity in Healthcare**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course provides an in-depth analysis of the diversity of the healthcare industry, types of technologies, flow of information, and levels of protection. It presents a plan-protect-respond framework of relevant legal and regulatory requirements, ensuring an organizations' policies and procedures are in compliance with industry standards. The course examines how an organization manages information risk through security and privacy governance, risk management lifecycles, and principle risk activities.

### **CYS 556 Healthcare Information Systems**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity, CYS 555 Cybersecurity in Health Care*

This course focuses on data and information technology to improve organizational performance in healthcare settings. System like the Nationwide Health Information Network (NwHIN) and other health information systems will be surveyed. Information systems and data management fundamentals will be reviewed. The use of research tools and databases will be used to analyze organizational problems. The course includes exploration of electronic medical records (EMRs) that are used in the medical fields. Legal and ethical issues will be explored as will the other use of technologies in healthcare settings.

### **CYS 560 Information Assurance**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course offers comprehensive awareness, guidance, best practices, and assessments on the principles of information systems security. Students explore the foundational elements of information systems security as defined by industry experts and the International Information Systems Security Certification Consortium (ISC)<sup>2</sup>, a leading certification authority. The curriculum covers key concepts of information systems security according to ISC<sup>2</sup>'s redesigned 'eight domains of knowledge' model for the Certified Information Systems Security Professional (CISSP) certification. By the end of the course, students are able to assess security risks, apply access controls, understand legal and compliance requirements, and develop effective security strategies. Students registering for this course are assessed a course resource fee.

Students registering for this course will be assessed a course resource fee.

### **CYS 565 Security Management Awareness**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course introduces Security Management awareness and provides important and cost-effective methods to protect sensitive information. Through a structured environment of physical, computer, and network security measures, implementation of effective user training, establishment of policies and procedures, and sharing of knowledge and expertise within an organization to protect sensitive information, each student is provided essential information to create and maintain a secure environment.

### **CYS 575 IT Risk Analysis and Management**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course examines information security risk analysis and management from a business perspective. The course will provide an overview of the key aspects of risk analysis and management, including asset identification and associated risk identification, qualitative and quantitative risk assessment and prioritization, determination of risk mitigation strategies, budgeting for risk, and

ongoing risk management. This course will provide knowledge, skills, and techniques to identify, prioritize, and manage the many IT security risks facing businesses today. Students will also examine how IT risk management supports IT governance and decision making by businesses. The role of risk analysts, auditors, security personnel, and management will be discussed.

### **CYS 577 Global Cybersecurity**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course focuses on four general areas of cyber capabilities and trends in the global community. It analyzes the theory and practice of cybersecurity and cyberwar through the lens of cyber capabilities of nation-states and non-state actors. Students evaluate existing and emerging trends in cyber-related strategies and policies addressing challenges faced by governments. The course also examines global cybersecurity policies and discusses best practices. By participating in this course, students gain a comprehensive understanding of global cyber capabilities and the evolving landscape of cybersecurity.

### **CYS 586 Digital Forensics and Investigation**

**3 credits**

*Prerequisite: CYS 500 Foundations of Cybersecurity*

This course provides an in-depth analysis of digital defense planning, technologies, and methods to safeguard organizational networks, databases, and applications. It presents a plan-protect-respond framework of digital security, covering the interaction of policies, implementation, and oversight. Additionally, the course includes techniques for performing computer forensic investigations. Assignments in a laboratory environment provide students with hands-on experience on these topics. By participating in this course, students gain comprehensive knowledge and skills to enhance digital security and conduct forensic investigations. Note, students registering for this course are assessed a course resource fee.

Students registering for this course will be assessed a course resource fee.

### **CYS 596 Capstone Project in Cybersecurity**

**3 credits**

*Prerequisites: The Capstone must be the last course taken. All major core and university requirement courses must be complete. The Capstone can be paired with one other course that is considered to be a general education course (excluding courses to meet the Written English Requirement and the Ethics Requirement), a concentration course, elective, or lab course (even if the lab is in the major).*

The capstone course examines computer security technologies and principles, including cryptography, authentication, access control, database and software security, and management issues such as physical and infrastructure security, human factors, and security auditing. The course also covers IT security management, risk assessment, and legal and ethical considerations. As the final course in the program, it includes a research project and an audio presentation, allowing students to synthesize their knowledge and skills in computer security to address complex security challenges.

## CYS 610 Cloud Technologies and Data Security

3 credits

*Prerequisite: CYS 500 Foundations of Cybersecurity*

Cloud and data security, also known as cloud computing security, consists of a set of policies, controls, procedures, and technologies that work together to protect cloud-based systems, data, and infrastructure. These fundamental security measures are crucial for protecting cloud data, supporting regulatory compliance, safeguarding customer privacy, and setting authentication rules for individual users and devices. This course covers principles such as authenticating access and filtering traffic, closely aligned with the ISC<sup>2</sup> Certified Cloud Security Professional (CCSP) certification. Cloud security can be customized to meet the specific needs of a business, providing flexibility and reducing administrative overhead. Assignments in a laboratory environment provide students with hands-on experience on these topics. Students learn to assess various applications of cloud security and understand how it is delivered, depending on the cloud provider or the security solutions in place.

Students registering for this course will be assessed a course resource fee.

## DBA 700 Contemporary Business Theory and Application

3 credits

*Prerequisites: None*

This course explores the evolving concepts and emerging trends in business administration, focusing on current theories, frameworks, and applied research methodologies. Through case studies, critical discussions, and research assignments, this course empowers DBA students to critically evaluate theoretical foundations, identify gaps and trends in the field, and apply advanced research methods to develop evidence-based solutions for strategic and managerial decision-making. Emphasis is placed on ethical, social, and global implications of business practices.

## DBA 701 Applied Research Methods in Business

3 credits

*Prerequisites: None*

This course provides an in-depth exploration of advanced research methodologies applicable to business administration. Students critically evaluate theoretical frameworks, apply qualitative and quantitative analysis methods, and develop evidence-based solutions to complex business challenges. Emphasis is placed on ensuring research reliability, validity, and adherence to ethical standards, with consideration of social and global implications.

## DBA 702 Leadership Theory and Development

3 credits

*Prerequisites: None*

This advanced doctoral-level course provides an in-depth exploration of leadership theories, practices, and development processes, emphasizing their application in contemporary organizational settings. The course critically examines key leadership models, their evolution, and their impact on organizational culture, effectiveness, and change. Students engage with theoretical frameworks from both classic and emerging perspectives, with a focus on developing their own leadership philosophy.

and style. Additionally, the course integrates the study of leadership development practices, the role of ethical decision-making, and the complexities of leading in a global and diverse environment. Through case studies, research projects, and reflective practice, students gain the skills to lead with both strategic foresight and operational competence.

---

**DBA 703 Financial Resources Management and Strategic Investment** **3 credits**

---

*Prerequisites: None*

This course provides an advanced exploration of financial resources management, focusing on concepts essential for effective strategic financial planning, capital budgeting, and asset allocation. The course emphasizes risk management, financial analysis, and resource allocation in both domestic and international contexts. Through case studies, simulations, and Open Educational Resources (OER), students gain practical insights into how financial resource management supports organizational goals.

---

**DBA 704 Organizational Structures & Systems Thinking** **3 credits**

---

*Prerequisites: None*

This course explores the complexities of organizational structures and systems, examining the design and functionality of various structures and the influence of systems on organizational efficiency and effectiveness. Through case studies and analysis, students explore concepts of organizational design, structure, control systems, and the interaction of these elements within dynamic business environments.

---

**DBA 705 Strategic Foresight and Strategy Formation** **3 credits**

---

*Prerequisites: None*

This doctoral-level course delves into the principles and practices of strategic foresight and strategy formation, equipping students with advanced tools and methodologies to anticipate future trends, evaluate potential opportunities, and develop adaptive strategies for organizational success. Emphasizing a long-term perspective, the course provides an in-depth understanding of how to systematically assess the external environment, identify emerging patterns, and integrate these insights into dynamic strategy formation processes. Students explore how strategic foresight informs decision-making, aligns organizational objectives with future market demands, and drives innovation. This course incorporates real-world case studies, simulation exercises, and research projects, fostering the development of critical thinking and strategic leadership skills necessary for navigating complex and rapidly changing business landscapes.

---

**DBA 706 Global Business Environment and Strategy** **3 credits**

---

*Prerequisites: None*

This course focuses on the complexities and challenges of the global business environment, providing students with the advanced knowledge and analytical skills needed to develop and implement effective strategies in an interconnected world. Through the exploration of economic, political, cultural, and technological factors that shape international markets, students gain a deeper understanding of global competitiveness, strategic alliances, and the dynamics of emerging markets. The course

emphasizes the role of strategic management in navigating the global landscape, integrating concepts of corporate social responsibility (CSR), sustainability, and ethical decision-making. Students engage in case studies, simulations, and strategic analysis to evaluate real-world business situations and craft strategies that leverage global opportunities while managing risks and uncertainties.

---

### **DBA 707 Marketing for Competitive Advantage**

**3 credits**

*Prerequisites: None*

This course focuses on advanced marketing strategies that organizations can implement to achieve and sustain competitive advantage in a dynamic global marketplace. Students explore cutting-edge marketing theories, frameworks, and practices, with an emphasis on data-driven decision-making, innovation, and customer-centric strategies. The course covers topics such as competitive positioning, brand differentiation, market segmentation, pricing strategies, and digital transformation in marketing. Emphasis is also placed on evaluating the competitive landscape and aligning marketing strategies with organizational goals to create long-term value. Through case studies, research projects, and critical analysis, students develop the skills to design and execute marketing strategies that foster sustainable competitive advantage.

---

### **DBA 708 Human Capital Management**

**3 credits**

*Prerequisites: None*

This course provides an advanced exploration of the strategic role human capital plays in enhancing organizational performance. The course delves into the critical processes of talent acquisition, development, engagement, and retention, emphasizing how organizations can leverage human capital as a key driver of competitive advantage. Students critically evaluate theories and practices in leadership, organizational behavior, workforce planning, performance management, and employee relations, and their integration with broader organizational strategies. The course also explores contemporary challenges in human capital management, including diversity and inclusion, global workforce management, technology in HR practices, and the ethical implications of human capital decisions. Through case studies, research, and strategic simulations, students develop the skills needed to effectively manage and transform human capital for organizational success.

---

### **DBA 709 Consulting Techniques**

**3 credits**

*Prerequisites: None*

This course is designed to equip students with advanced knowledge and practical skills for executing high-impact consulting engagements across various industries. The course covers the full spectrum of consulting methodologies, from diagnosing organizational challenges to designing and implementing strategic solutions. Students examine key consulting frameworks, develop client relationship management strategies, and learn to manage complex projects. The course emphasizes critical thinking, ethical decision-making, and the use of data and evidence to support recommendations. By engaging with case studies, simulations, and real-world consulting projects, students gain experience in delivering actionable insights and demonstrating value to clients.

### **DBA 710 Dissertation Seminar I**

**3 credits**

*Prerequisites: DBA 701 Applied Research Methods in Business*

This course focuses on guiding students through the foundational steps of their dissertation journey. By the end of this course, students develop and submit a comprehensive dissertation proposal, identifying their research problem, objectives, and methodology. Students choose their dissertation format (Three-Paper Model or Applied Project) and build their Dissertation Committee. The seminar emphasizes research alignment with career goals and ensures proposals meet academic rigor and practical relevance.

### **DBA 711 Dissertation Seminar II**

**3 credits**

*Prerequisites: DBA 710 Dissertation Seminar I*

In this course, students expand their research by conducting a comprehensive literature review and refining their research framework to align with their chosen dissertation model: the Three-Paper Model or the Applied Project. Students focusing on the Three-Paper Model work on identifying topics for each paper and connecting them under a cohesive research framework. Those pursuing the Applied Project develop a proposal that includes an applied solution grounded in design science principles. This seminar emphasizes critical analysis of existing literature, the synthesis of ideas, and alignment of theoretical frameworks with the chosen dissertation model.

### **DBA 712 Dissertation Seminar III**

**2 credits**

*Prerequisites: DBA 711 Dissertation Seminar II; Two residency courses (DBA 720 DBA Residency I and DBA 721 DBA Residency II); all Major courses; all Concentration courses.*

This course is the final seminar in the dissertation sequence, where students finalize their dissertation and prepare for formal presentations. Students pursuing the Three-Paper Model focus on completing, refining, and presenting the three interrelated papers. Applied Project students focus on implementing their project (if applicable), evaluating its outcomes, and preparing for formal presentation. The seminar emphasizes iterative feedback, presentation preparation, and integrating scholarly or practical contributions to ensure students produce work that aligns with professional goals.

### **DBA 713 Dissertation Seminar IV (Optional)**

**1 credit**

*Prerequisites: DBA 712 Dissertation Seminar III*

This course is an extension course in the dissertation sequence, for students finalizing their dissertation and preparing for formal presentations.

### **DBA 714 Dissertation Seminar V (Optional)**

**1 credit**

*Prerequisites: DBA 713 Dissertation Seminar IV*

This course is an extension course in the dissertation sequence, for students finalizing their dissertation and preparing for formal presentations.

## **DBA 720 DBA Residency I**

**2 credits**

*Prerequisites: One completed concentration*

The DBA Residency is a key component of Excelsior University's Doctor of Business Administration program. It is designed to immerse students in advanced business theory, practice, and research methodology. During the residency, students engage in collaborative learning, leadership exercises, and seminars with faculty, industry experts, and peers, as well as develop a foundation for their dissertation research.

## **DBA 721 DBA Residency II**

**2 credits**

*Prerequisites: Two completed concentrations*

The DBA Residency is a key component of Excelsior University's Doctor of Business Administration program. It is designed to immerse students in advanced business theory, practice, and research methodology. During the residency, students will engage in collaborative learning, leadership exercises, and seminars with faculty, industry experts, and peers, as well as develop a foundation for their dissertation research.

## **ECO 508 Managerial Economics**

**3 credits**

Everyone knows that success in business is a matter of strategy. However, not everyone knows how to think through decisions strategically, using the tools of game theory and economic analysis to gain an advantage over opponents, and to change the game fundamentally in your favor. In this course, you will learn to use tools developed by economists to address common situations faced by managers in a day-to-day business environment. You don't have to win a Nobel Prize to understand the economic principles that have won these distinctions for economists that developed game theoretic thinking, and decision-rules based on market structure, consumer and firm behavior, and other elements of a commercial environment. In this course, you will learn to analyze a market, competitors, customers, employees, and purchasing decisions in order to gain traction on the variety of commercial roads traveled routinely in the world of business management.

## **HSC 510 Health Care Policy, Politics, and Power**

**3 credits**

This course introduces you to the core elements of healthcare policy analysis, policymaking, and the far-reaching impacts that power-policy dynamics have on how policies are written and implemented. You will develop leadership skills in health policy analysis, development, and critique. Strategies to advocate for improved health policy and power-sharing in increasingly volatile healthcare and political arenas will be explored. You will develop expertise in a health-related policy of interest to you through the completion of a term-length project.

### **HSC 516 Communication Strategy for the Health Care Leader**

**3 credits**

Healthcare leaders have a profound responsibility to communicate effectively with diverse audiences. An increasingly remote workforce has created a sense of urgency to communicate effectively in the digital space. This course provides an overview of prevalent communication theories and a conceptual framework for strategic, effective health communication. You will examine a variety of contexts of communication typical to healthcare administrative roles, including communications planning, community-building, leading productive meetings, advocacy, inclusive communication across cultures, and crisis communication. Significant emphasis will be placed on new and emerging forms of leadership communication, ranging from myth-busting to social media and remote platforms. You will create a strategic communication plan within a health environment of your choosing and develop your own communication development plan.

HSC 516 is cross-listed with BUS 516. Students in the Health Sciences degree should register for the HSC version of this course, and Business degree students should register for the BUS version of this course. Students may not take both versions of the course and have the credit count toward graduation.

### **HSC 517 Contemporary Issues in Health Care Delivery Systems**

**3 credits**

In this advanced healthcare delivery systems course, students gain an in-depth understanding of current issues and emerging trends facing leaders within healthcare delivery systems. The diversity and complexities of various healthcare settings are explored, along with the drivers of healthcare delivery. Themes of quality assurance, patient safety, access, and ethical leadership are infused throughout the course. Students apply what they have learned through analysis of real-life case studies.

### **HSC 525 Informations for Healthcare Leaders**

**3 credits**

Information management is vital to the functioning of health and public health organizations. This course equips you with the skills to guide ethical, evidence-based decision-making around current and emerging information technologies. It examines the use of healthcare technology in warehousing, communicating data, and safeguarding data and electronic health records. You will learn to leverage the power of informatics and your teams to positively impact health outcomes, improve organizational processes, and ensure all health information is protected. You will have the opportunity to work on a term-length project in which you analyze and identify solutions for an informatics problem impacting a healthcare organization.

### **HSC 526 Strategic Management of Health Care Organizations**

**3 credits**

*Prerequisite: HSC 431 Introduction to Health Care Delivery Systems. This course is only a prerequisite for students in the MBA program that have no health care related background and are choosing this concentration.*

This course explores theories and principles underlying strategic planning specific to health care environments. Through case study analyses, students learn strategies on how to position health care organizations in order to sustain a competitive advantage in a volatile reimbursement-driven

industry. Some of the topics covered in this course include strategic positioning, strategies of mergers and acquisitions, and competitive advantage and profitability.

HSC 526 is cross-listed with BUS 526. Students in the Health Sciences degree should register for the HSC version of this course, and Business degree students should register for the BUS version of this course. Students may not take both versions of the course and have the credit count toward graduation.

### **HSC 528 Health Care Finance**

**3 credits**

Students in this course gain in-depth knowledge about the financial environment in which health care organizations operate. Students learn health care finance concepts, managerial and accounting principles, and various means of reimbursement for health services. Students complete a health care finance project to effectively demonstrate the steps in the budget process and practice using financial analysis tools.

### **HSC 561 Quality Management in Health Care**

**3 credits**

Healthcare quality is a cornerstone by which professionals practice and lead within their organizations. This course offers an in-depth exploration of healthcare quality, including essential principles and techniques relevant to quality improvement in all areas of health care. You will apply quality improvement theories and evidence-based processes to pressing quality issues facing health and public health providers and will learn how to use these processes to initiate and sustain changes.

### **HSC 644 Nutrition Science for Health Professionals**

**3 credits**

The world of nutrition has become increasingly controversial in recent decades. With so many diets to choose from and a population-wide quest for the “perfect diet,” understanding the science supporting healthy nutrition has never been more critical. Information that is portrayed as science-based is often at least partially inaccurate. This course will equip you with a foundational understanding of nutritional science. You will learn how to assess nutritional information for scientific rigor. From there, you will begin to apply the science to case-based learning, giving you opportunities to address nutritional issues in a culturally sensitive manner. You will learn about the role of food in culture, how food metabolizes in the human body, and how to formulate nutritional recommendations for both healthy individuals and those who are living with chronic disease.

### **HSC 645 Nutrition Across the Lifecycle**

**3 credits**

Nutritional needs change over the life course. This course will equip you with a foundational understanding of nutritional needs across the life span of healthy individuals from conception through elderhood. You will learn how to assess nutritional needs based on life stage and develop evidence-based dietary recommendations for diverse populations across the lifecycle. You will examine the socioeconomic, cultural, and environmental influences on nutritional needs and preferences. Using simulated nutrition case conferences, you will gain valuable skills in culturally sensitive assessment, nutrition education, and development of dietary recommendations.

### **HSC 646 Health Education: A Cross-Cultural Perspective**

**3 credits**

Health education is a critical tool for the health professional. This course will provide you with valuable career skills in assessing educational needs, planning, delivering, and evaluating culturally competent health education with diverse individuals and communities. By learning to apply learning theories and motivational interviewing, you will be equipped to deal with barriers that clients may face. A major focus will be on identifying and dispelling prevalent myths around health and nutrition, particularly those fueled by media and social media. By the end of this course, you will develop a health education intervention that can serve as a model for use in your career.

### **HSC 648 Nutrition and Chronic Disease**

**3 credits**

Nutrition is a cornerstone for health and quality of life. Healthful nutrition is essential for the prevention of chronic disease and is a central intervention for people living with chronic disease. This course will provide you with an overview of various chronic conditions and the vital role that nutrition plays in prevention and treatment. You will explore a number of chronic conditions, including cancer, diabetes, cardiovascular disease, kidney disease, obesity, gastrointestinal diseases, and more. You will have the opportunity to apply your knowledge by completing assignments focused on either preventing or managing a chronic condition using nutritional best practices.

### **HSC 697 Graduate Health Sciences Capstone**

**3 credits**

*Prerequisite: Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

This end-of-program capstone course allows you to synthesize and apply the knowledge acquired throughout your graduate program. You will demonstrate mastery of skills required for advanced practice roles through varied assessments that address current and emerging practice-based and system-based issues in health care.

### **HSC 698 MS in Health Care Administration Capstone**

**3 credits**

*Prerequisite: Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

This end-of-course capstone provides students with the opportunity to demonstrate knowledge achieved throughout the program. Students will complete a special project designed to address an issue faced by health care administrators.

### **IND 501 An Interdisciplinary Approach to Ethical Leadership**

**3 credits**

The interdisciplinary first-course experience for graduate programs develops highly effective transformational leaders who formulate sustainable, ethically sound solutions to practical management problems encountered in a complex global environment. Students learn how to set direction and work with multiple constituencies with divergent needs through an ethical lens that includes social responsibility and the intersections of diversity, culture, and environment, and how these differences affect best practices in leadership in their respective disciplines.

### **IND 502 Strategic Talent Management in a Complex World**

**3 credits**

This interdisciplinary course enables students to acquire the skills necessary to lead strategically and decisively across all functions in an organization, including recruitment and selection of employees, training and development, performance appraisals, health and safety, labor relations, and change management. Students are introduced to leadership and talent management across disciplines and apply strategies to the private, public, and not-for-profit sectors. This course integrates legal, management, and social science research with an active learning approach to executive-level leadership education. Students apply these leadership skills through their own disciplinary lenses and gain an in-depth understanding of how these skills are applied in other disciplines.

### **IND 503 Data Driven Decision Making**

**3 credits**

This course is an interdisciplinary approach to research methods and is designed to provide students with an introduction to statistical theory and practice. Students will learn how to research a current issue and interpret statistics for the fields of criminal justice, business, health sciences, and public administration, assuming leadership roles in their discipline.

### **IND 522 Leading High Performing Teams**

**3 credits**

Teams accomplish what individuals alone cannot. Teams are vital to the world of work and managing teams well is a competitive advantage. In this course, students engage with management and leadership theories as a foundation for understanding how individuals evolve into high-performing teams. The course identifies sources of team conflict and provides an examination into various methods of resolution. Students reflect on personal team and leadership experiences and analyze various approaches. Through a critical analysis of a team, students investigate team leadership techniques and link observations and experiences to academic theories.

### **MBAE 508 Managerial Economics**

**3 credits**

In this course, students analyze real-world case studies to assess the application of economic theories in managerial decisions and propose alternative economic strategies for optimizing choices. They develop practical skills in formulating mathematical models, executing scenario analyses, and communicating economic insights through comprehensive reports and stakeholder-oriented presentations. The course also explores the impact of economic policies on business operations, guiding students in evaluating implications and devising adaptive or influential strategies. Additionally, students integrate economic principles into leadership strategies, fostering a culture of informed decision-making within organizations.

### **MBAE 509 Resilient Leadership and Organizational Behavior**

**3 credits**

This course equips students with the knowledge and skills to navigate dynamic organizational environments through resilient leadership. Participants evaluate resilient leadership theories, formulate strategies for fostering workplace resilience, and analyze case studies to discern their impact on organizational culture and performance. The course emphasizes creating innovative solutions, applying resilient leadership for positive organizational change and synthesizing research contributions to

scholarly discourse and practical applications. Additionally, students develop a comprehensive resilience plan, integrating leadership principles to fortify organizations in ever-evolving contexts. This holistic exploration prepares leaders to thrive in dynamic professional landscapes.

### **MBAE 521 Operations and Project Management**

**3 credits**

Students learn about advanced project management principles and develop schedules focusing on key concepts. The emphasis is on applying operations strategies for optimal processes, resource use, and efficient supply chains to enhance organizational performance. Through advanced techniques, students navigate project and operational risks for successful outcomes. Quality management, including Six Sigma methodologies, ensures high-quality deliverables. The course incorporates data analytics and quantitative methods for informed decision-making, utilizing KPIs to measure and improve performance. Essential team management skills, team development, conflict resolution, and effective project communication tools are integral components. This learning experience equips students for success in the dynamic fields of operations and project management.

### **MBAE 524 Corporate Finance and Accounting**

**3 credits**

This comprehensive course equips participants with the essential skills for strategic financial decision-making. Through a blend of theoretical understanding and practical application, participants learn to conduct financial analyses that integrate accounting and auditing, ensuring accurate and transparent reports. The course delves into optimizing capital structures, incorporating auditing principles to assess the impact of financing options on financial health. Participants gain proficiency in analyzing a firm's performance using financial statements and explaining complex financial transactions such as mergers, leverage buyouts, and divestitures of assets. Moreover, the course focuses on the development of integrated financial plans, incorporating accounting, auditing, and forecasting for informed and strategic decision-making.

### **MBAE 532 Ethical Risk Management and Compliance**

**3 credits**

Businesses face various risks, including financial, operational, strategic, compliance, and reputational risks, in this volatile and unpredictable world. The goal of risk management is not only to minimize the negative impact of potential threats but also to capitalize on opportunities that may arise. This course provides a comprehensive exploration of ethical risk management and compliance in the business context. Participants apply ethical theories and frameworks to navigate complex business scenarios, ensuring adherence to laws, regulations, and industry standards. The course emphasizes the development of ethical expectations, policies, and procedures to foster an organizational culture of ethical awareness and compliance. Participants also learn to prioritize ethical conduct in managing stakeholder relationships and effectively navigate complex, global business interests. Furthermore, the course equips individuals with the skills to apply risk mitigation techniques, establishing a resilient organizational framework that places a premium on ethical conduct and compliance.

### **MBAE 570 Information Technology**

**3 credits**

In this course, students explore the strategic role of information technology (IT) in modern organizations. They learn to recommend and justify the adoption of advanced business technologies, focusing on enhancing productivity and organizational efficiency. Students delve into the transformative power of IT, justifying its role in fostering innovation, enabling new business models, and maintaining competitiveness in dynamic markets. Additionally, students gain insights into the risks associated with IT, becoming proficient in implementing measures to ensure data security and privacy, with a particular emphasis on cybersecurity threats. The course also equips students with the skills to facilitate effective communication and collaboration within teams, utilizing collaborative tools and platforms. Furthermore, students develop the ability to create compelling data visualizations through data analysis, enabling them to communicate complex information and contribute to strategic decision-making processes.

### **MBAE 573 Strategic Brand Marketing**

**3 credits**

In this course, students master the art of creating impactful brand marketing campaigns, developing a deep understanding of various marketing frameworks and their applicability across diverse organizational cultures. They critically evaluate marketing contexts, examining the practical use of media to achieve organizational goals. The course also focuses on deriving value from social media activities, enabling students to generate a return on investment for time and resources invested. Additionally, students gain insights into the ethical and regulatory aspects integral to best-practice marketing programs, fostering a comprehensive understanding of responsible marketing strategies.

### **MBAE 595 Systems and Sustainability**

**3 credits**

In this course, students master advanced systems thinking, creating innovative and sustainable business strategies. They integrate corporate social responsibility into business practices, emphasizing ethical decision-making, community engagement, and responsible business conduct. Additionally, they develop strategies for business resilience, considering technological advancements, market changes, and societal trends, while cultivating an ethical organizational culture aligned with sustainability principles and values. The course prepares students to navigate complex challenges with creativity and contribute to responsible and sustainable business conduct.

### **MBAE 596 Strategy and Entrepreneurial Innovation**

**3 credits**

In this course, students acquire the skills to formulate strategic decisions aligned with organizational goals and responsive to dynamic market conditions. Emphasizing innovation and creative thinking, the course fosters a transformative culture, enabling students to apply effective strategies for organizational change and successful plan execution. Students gain the ability to identify opportunities for innovation and business growth in dynamic markets and execute global strategies for expanding market presence and achieving international outcomes. This comprehensive approach prepares them for leadership roles in evolving business landscapes, emphasizing sustainability and strategic decision-making.

### **MBAE 699 Business Strategy Capstone**

**3 credits**

*Prerequisite: Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

In this capstone course, students integrate their acquired knowledge into a self-designed and led final project. They apply inclusive, sustainable business practices, leverage technology for efficiency, and make informed strategic decisions within the context of their project. Emphasis is on fostering inclusive teams, effective leadership communication, and navigating dynamic environments, all woven into their unique project. The experience encourages students to leverage business networks within their project, generating new ideas and opportunities. This culmination prepares students for leadership roles by integrating multidimensional skills for impactful contributions to the business landscape through their self-directed project.

### **MCJ 622\HSC 622 Grant Writing**

**3 credits**

The course provides hands on learning and instruction on the art of grant writing and how it can be applied in nonprofit, academic and institutional settings. Students will work through the grant funding and application process, including, program need, program development, budget, objectives and outcomes and evaluation, as well as, how strategic planning supports an organization in achieving its long term goals.

### **MCJ 518 Comparative Justice**

**3 credits**

The course will provide a critical examination of the history, significance, and method of comparing and contrasting global criminal justice with those prevailing in the United States. Moreover, the course gives students significant understanding that no system is perfect and each has their own strengths and challenges—a sound model. Students elaborate on methods of evaluation of the individual system from a law enforcement leadership perspective by systematically comparing the criminal justice systems and examine both what works and doesn't work dependent upon the overall circumstances—relative to cultural and historical contexts. Students digest how each balance individual rights and the necessity for order maintenance.

### **MCJ 522 Pillars of Criminal Justice**

**3 credits**

This course examines criminal justice issues from the perspectives of the three pillars (law enforcement, courts, and corrections) to see how they work together to affect change in society. Through the lens of current issues, theory, policy, and ethics the course will explore how actions taken by different components of the criminal justice system interact and play out in society. Students will have the opportunity to respond to events as a leader of each of the pillars.

### **MCJ 530 Legal and Constitutional Issues**

**3 credits**

This course examines some of the more important legal and constitutional issues facing criminal justice practitioners. Topics such as the roles of the courts in our judicial system, the powers entrusted to the separate branches of our government, 1st and 2nd Amendment rights and guarantees, 4th,

5th and 6th Amendment protections and issues faced by the various players in the criminal justice system, and restrictions on employee freedom of speech will be discussed. The course also addresses lying and decision in criminal justice and racial prejudice and discrimination.

---

### **MCJ 628 Personnel Management in Criminal Justice**

**3 credits**

This course presents highlights of the trials and tribulations of executives in Criminal Justice in all areas of personnel from recruitment and selection through training, motivation, discipline and promotion. The course evaluates the policy and political considerations faced by those in a hiring position from the perspectives of different organization sizes and state laws such as right to work states versus union states.

---

### **MCJ 630 Risk Assessment in Homeland Security**

**3 credits**

This course provides an introduction to critical infrastructure protection and the policies, strategies, and practical applications of risk and resilience efforts from an all hazards perspective. Topics covered include an in-depth examination of national infrastructure protection policy, the roles and responsibilities of sector-specific agencies, coordinating frameworks, public-private partnerships, and the emerging issues of cybersecurity, interdependencies, and climate change. With a focus on policies that support critical infrastructure strategies, this course is designed to enhance the student's ability to recognize and evaluate risks associated with human-caused, natural, and technological disasters through a myriad of risk management approaches, including best practices used by the homeland security enterprise.

---

### **MCJ 650 Terrorism and Counterterrorism**

**3 credits**

This course focuses on the causes, methods, motivations and historical lessons surrounding terrorism with particular attention to the U.S. and the shift in rhetoric and resources in the government's reaction to terrorism following the events of 9/11. This course will provide students with a basic understanding of the most important issues and debates concerning terrorism and counterterrorism policies. Topics covered during this course include: definitions of terrorism, terrorism trends and measurement, causes of terrorism, domestic terrorism, international terrorism, the impact of 9/11, counterterrorism policy and practice, and the future of terrorism.

---

### **MCJ 651 Overview of Homeland Security and Emergency Management**

**3 credits**

The homeland continues to experience new threats domestically, environmentally and through our cyber systems. Homeland Security and Emergency management professionals need to be able to predict, plan and execute plans to protect their communities. In this course emerging issues and lessons learned from past events will be explored. Students will identify potential threats in each of the 16 sectors, anticipate threats to their communities, identify the vulnerabilities and create plans to keep their communities safe. They will also present their plans to community stakeholders for consideration and implementation.

**MCJ 652 Mental Health Issues in Criminal Justice****3 credits**

This course gives students an understanding of the ways criminal behaviors and mental health issues are dealt with in the criminal justice system. The course also explores the philosophical conflict between treatment and punishment, and resources available in the Criminal Justice System.

**MCJ 660 Human Trafficking****3 credits**

This course on modern day slavery takes an in-depth look at human trafficking both domestically and internationally. It focuses on existing policies and practices of prevention and prosecution, such as victim and perpetrator identification, to combat these crimes and to protect and address the needs of victims. In the course student's role play members of a Human Trafficking Task force working a case as an investigator or as an advocate. Together the task force devises recommendations for future task forces.

**MCJ 698 Capstone****3 credits**

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

This is an advanced capstone course designed for students to demonstrate that they have successfully mastered the skills and knowledge presented to them during the course of the MSCJ program. Through a mixture of in-depth discussions, independent research, and written analysis, students will synthesize and apply knowledge gained in the core and concentration courses. By developing an original project focused on social justice, students will demonstrate that they can identify problems in the field and have mastered the ability to apply research and critical thinking skills to address criminal justice and policy issues. This is a reading- and writing-intensive course that serves as the culmination of the students' work at the Master's degree program. This is an intense eight-week course requiring significant research and writing from the student.

**MPA 500 Introduction to Public Administration Theory and Practice****3 credits**

This course is an introduction to the study and practice of Public Administration. It will provide an overview of the field of public administration, focusing on the functional roles of public administration in the political process. It will introduce students to concepts and practices in public administration, focusing on accountability and performance. Additionally, this course will explore the practical application of concepts to current issues to the field of public administration.

**MPA 502 Public Management in a Political Environment****3 credits**

This course analyzes concepts, methods, skills, and procedures involved in managing public organizations in a political environment. Throughout the course, you will consider problems of partnering, collaboration, social change, public opinion, organization, planning, decision making, performance evaluation, and management of human resources. The course utilizes project-based group assignments, individual assignments, discussions, and reflections to assess mastery of course concepts.

### **MPA 511 Public Budgeting and Financial Management**

**3 credits**

This course will allow you to examine the key aspects of a public sector budget from identifying and securing key stakeholder support, to identifying state and local funding sources to be allocated based on the needs of an organization. You will also study the theory of budgeting from the public sector perspective, with an emphasis on understanding and applying the principles of financial management.

Cross listed with MCJ 511.

### **MPA 531 Public Sector Technology**

**3 credits**

This course explores ways in which technology is transforming the public sector. It analyzes the use of new technologies and strategies to identify needs, develop solutions, and deliver services more effectively. Students will discuss technology in such areas as public safety, education, transportation, economic development, finance, administration, and health and human services.

### **MPA 651 Contemporary Issues in Nonprofit Management**

**3 credits**

This course explores the unique characteristics of non-profit organizations, and the impact of current issues on these entities in the United States. You will learn to expand your management and analytical skills, and your knowledge of the nonprofit sector in general, utilizing specific nonprofit management principles and techniques. Learning how to navigate the stakeholders in the nonprofit sector is a skill that is integral to management in the public arena.

### **MPA 698 Capstone in Public Administration**

**3 credits**

*Prerequisites: Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

The Capstone course represents an integration of classroom learning with practical experience. You will solve real problems for public and nonprofit organizations through scenarios that apply to federal, state, and local levels of government, as well as an issue that you have identified in an organization of your choice. You will draw on the coursework and your own work experiences to develop specific recommendations for design, implementation, and evaluation of a project task. The course culminates with a complete, professional portfolio, ready to showcase to employers.

### **NUR 502 Theoretical Foundations of Nursing Practice**

**3 credits**

*Prerequisite: Active and unencumbered RN license*

This course focuses on the theoretical foundations of nursing practice through the exploration of nursing theories, organizational change models, and learning theories. The application of theories relevant to nursing practice will be emphasized. The examination of multiple theories and their implications on nursing knowledge development and practice will serve as a foundation for future graduate courses. In addition to the classroom discussions and written assignments, students will

engage in a 1-hour practice experience that will support new understanding of professional practice. This is an 8-week 3-credit hour course requiring a minimum of 18 hours of course engagement each week (refer to the Credit Hour Calculation Policy found in the Student Handbook.) Course engagement includes student activities such as discussions, reading, study time, practice experience, and assignments.

Delivery: Online course delivered over 8 weeks.

### **NUR 503 Transformational Nursing: Innovation, Inquiry, and Scholarship** **3 credits**

*Prerequisites: Active and unencumbered RN license, NUR 502 Theoretical Foundations of Nursing Practice*

This course explores historical knowledge development through the examination of nursing as an art and a science. The science of nursing will be examined through the fundamental patterns of knowing and the science of knowing. The master's-prepared nurse will develop the ability to apply ethical and moral reasoning, evidence-based competencies, and leadership strategies to promote innovation and to transform nursing practice. Students will use the spirit of inquiry, combined with personal creativity, and the translation of evidence to enhance interprofessional collaboration.

Delivery: Online course delivered over 8 weeks.

### **NUR 505 Advanced Pathophysiology** **3 credits**

*Prerequisite: Active and unencumbered RN license*

This course is an in-depth study of the pathophysiologic basis of disease as it affects individuals across the life cycle. Emphasis will be placed upon endogenous and exogenous factors which contribute to altered functional balance at the cellular, tissue, organ, and system levels. National and global health disparities caused by genetic, developmental, and environmental factors will be discussed. Assessment findings, diagnostic testing and interventions specific to selected health problems are explored to begin development of critical thinking skills for pathophysiologic causes and treatments of given disease processes.

Delivery: Online course delivered over 8 weeks.

### **NUR 506 Advanced Pharmacology** **3 credits**

*Prerequisite: Active and unencumbered RN license*

The purpose of this course is to examine pharmacotherapeutic agents used in the treatment of illness and the promotion, maintenance, and restoration of wellness in diverse individuals across the life span. This course will provide the foundation for safe, effective drug therapy and the role of the nurse in health promotion, disease prevention, and management. Emphasis will be placed on the

fundamentals of pharmacokinetics and pharmacodynamics as they relate to practice experience. This course includes 9 hours of practice experience through digital virtual patient activities simulating a real patient via Shadow Health.

Delivery: Online course delivered over 8 weeks.

### **NUR 507 Advanced Physical Assessment**

**3 credits**

*Prerequisite: Active and unencumbered RN license*

This course focuses on comprehensive physical assessment which includes in-depth health history, physical and psychological signs and symptoms, developmental stages, pathophysiologic changes, and psychosocial and cultural characteristics of the clients across the life span. Emphasis is placed on applying critical thinking and diagnostic reasoning skills in assessing, diagnosing, and monitoring the health status of clients and families. Students obtain the practice skills necessary for advanced communication (i.e., clinical interviewing, focused history taking), psychosocial and physical assessment, critical diagnostic reasoning, differential diagnosis, and clinical decision-making through course readings, dialog, discussions, videos, simulations, and practical examinations. This course includes 45 hours of practice experience through digital virtual patient activities simulating a real patient via Shadow Health.

Delivery: Online course delivered over 15 weeks.

### **NUR 508 Research and Evidence-Based Practice**

**4 credits**

*Prerequisite: Active and unencumbered RN license*

This course focuses on the development of the master's prepared nurse as a role model for the translation and generation of evidence in nursing practice. The goals of research, evidence-based practice, and quality improvement will be highlighted and the principles of each will be applied to the nursing setting. Students will examine personal practice in relation to policy, research from nursing and related fields, and research design to provide a comprehensive approach to care. The integration of theory, evidence, cultural considerations, ethics, technological aspects of scholarly inquiry, and clinical judgement when implementing changes will be emphasized. The student will cultivate leadership skills that will prepare them to collaborate in inter-professional teams that initiate, implement, and evaluate innovative practice changes.

Delivery: Online course delivered over 15 weeks.

## NUR 515 Management Information for Decision Support

3 credits

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

This course provides an overview of clinical decision support focusing on the identification, acquisition, analysis, interpretation and application of data, databases, and decision making strategies which influence health care decisions for improved health care. The course delves into knowledge management and artificial intelligence and its impact on clinical decision making and patient safety. Using a consultant lens, the student will engage in organizational analysis to determine the best decision support system for implementation based on the needs of the clinicians within their chosen organization. Further, the student determines an implementation approach and plan, and identifies goals while evaluating the effectiveness of the selected system.

Delivery: Online course delivered over 8 weeks.

## NUR 521 Data, Information, and Knowledge

3 credits

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

This is a course offering graduate nursing students the opportunity to focus on concepts involved in the design of a database. Specifically, we'll examine the usage, management, and evaluation of data through the application of basic concepts of database design as well as knowledge of data representation, data sets, and data integrity. Through the use of databases, critical discernment and reasoning are applied in composing queries and reports to assess healthcare problem prominence and identify solutions. Through course readings, incorporation of the ANA Nursing Informatics: Scope and Standards of Practice, discussion boards, and an individual project, students will build upon basic knowledge of data information, the data knowledge continuum, security of databases, and develop an understanding of large scale information system environments in order to understand risk, improve care delivery, and provide guidance in the integration of technology in nursing practice.

Delivery: Online course delivered over 8 weeks.

## NUR 533 Policy, Ethics, and Population Health

4 credits

*Prerequisite: Active and unencumbered RN license*

This course examines public policy, political ideology, and ethics as they shape health policy across populations. Political ideology, social and health policy are considered within the lens of population based health and reducing health disparities. The role of the master's-prepared nurse lead and advocate within the public policy arena is explored and discussed. Contemporary issues in health policy viewed from the perspective of ethics and the social and material determinants of health are considered. A primary focus of the course is consideration and development of the knowledge and skills that the master's prepared nurse needs to be a change agent in health policy. This is an 8 week 4 credit hour course requiring a minimum of 18 hours of course engagement each week (refer to the Credit

Hour Calculation Policy found in the Student Handbook.) Course engagement includes student activities such as discussions, readings, study time, and assignments.

Delivery: Online course delivered over 8 weeks.

### **NUR 615 Management of Clinical Systems**

**3 credits**

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

In Clinical Systems Management, students explore the theoretical basis and empirical evidence supporting leadership, communication, interprofessional collaboration, and systems thinking. A focus of this course is on acquiring the knowledge, skills, and disposition for advancing practice and supporting quality and safety as leaders in healthcare systems.

Delivery: Online course delivered over 8 weeks.

### **NUR 625 Management of Fiscal and Operational Systems**

**3 credits**

*Prerequisites: Active and unencumbered RN license, and all Phase I courses*

The focus of Management of Fiscal and Operational Systems is to provide a foundation in the financial aspect and business strategies of health care in order to maximize organizational performance. Learners acquire knowledge and skills in developing and analyzing budgets, assessing/accessing variances, judging benchmarking, regulatory requirements, interprofessional collaboration, and forecasting future assets and revenues. This course encompasses the analysis of the environment that challenges health care organizations to maintain safe, quality patient care while shifting to meet regulatory and external requirements. The role of the masters prepared nurse, Nurse Manager, and Chief Nursing Officer in interprofessional financial planning for quality, safety, and financial stability will be addressed.

Delivery: Online course delivered over 8 weeks.

### **NUR 635 Leadership in Organizational Systems**

**3 credits**

*Prerequisites: Active and unencumbered RN license, and all Phase I courses*

Leadership in Organizational Systems focuses on critical examination of leadership styles, strategies, and competencies of the nurse executive in order to successfully manage the health care enterprise. It emphasizes leadership skills for strategic planning, enhancing team performance and interdisciplinary collaboration, and creating a culture of quality performance.

Delivery: Online course delivered over 8 weeks.

## **NUR 646 The Nursing Leadership and Administration Capstone**

**6 credits**

*Prerequisites: Active and unencumbered RN license. Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

The graduate nursing capstone is a culminating experience designed to provide learners with an opportunity to apply knowledge and skills acquired throughout the program of study focusing on the competencies of the graduate level nurse. This 6-credit course consists of several integrated components: discussion, reflective journal, scholarly paper, 135 practice experience hours, and project presentation. Assessment of the learner's attainment of program competencies is built into these components. No additional hours will be awarded beyond the 135 hours. 6.00 Credits, 3 credits allotted to didactic and 3 credits to practice experience. Practice Experience: 135 hours practice experience of an independent project reviewed and approved by instructional faculty. Students will work with their approved mentor to design a leadership project, plan its implementation in detail, implement the project, and prepare a comprehensive evaluation plan for the project. Students use a qualified individual who volunteers to serve as their mentor\* for their project. Participation of the mentor is subject to approval by the capstone faculty. Individual with master's degree or higher who has expertise within the designated specialization and agrees to voluntarily serve as a resource for the student. Prerequisite(s) Completion of all Phase I and Phase II courses. Active and unencumbered RN license.

This requirement must be completed through Excelsior University.

Delivery: Online course delivered over 15 weeks.

## **NUR 651 Systems Development in Healthcare**

**4 credits**

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

This course focuses on a structured methodology to select, develop, and maintain a system; this approach is called the system development life cycle (SDLC). The course incorporates six modules corresponding to the four phases of the systems life cycle: planning, analysis, design, and implementation. System projects as they move through this life cycle require definition of requirements, business need determination and combine various models to provide a design framework; and the management of projects also will include the integration of organizational behavior concepts.

Delivery: Online course delivered over 15 weeks.

## NUR 653 Designing a Learning Environment

3 credits

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

This course focuses on the creation of teaching-learning environments and the integration of the role of faculty/educator, uniqueness of the learner, the setting and context within which the learning occurs, the teaching learning strategies used to achieve learning outcomes, and evaluation of the effectiveness of this process.

Formerly NUR 650 Designing a Student Learning Environment.

Delivery: Online course delivered over 8 weeks.

## NUR 661 Program and Curriculum Development in Nursing Education

3 credits

*Prerequisites: Active and unencumbered RN license, all Nursing Phase I courses*

This course focuses on curriculum and syllabus/program development, including theoretical frameworks and design, philosophical foundations, and selection of learning experiences to achieve outcomes.

Delivery: Online course delivered over 8 weeks.

## NUR 662 Assessment and Evaluation in Nursing Education

3 credits

*Prerequisite: Active and unencumbered RN license, and all Phase I courses*

This course is designed to introduce the student to the evaluation process, including test construction, clinical performance assessment, program evaluation, and strategies for evaluating learning outcomes.

Delivery: Online course delivered over 8 weeks.

## NUR 676 The Nursing Education Capstone

6 credits

*Prerequisites: Active and unencumbered RN license. Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

The graduate nursing capstone is a culminating experience designed to provide learners with an opportunity to apply knowledge and skills acquired throughout the program of study focusing on the competencies of the graduate level nurse. This 6-credit course consists of several integrated components: discussion, reflective journal, scholarly paper, 135 practice experience hours, and project presentation. Assessment of program competencies is built into these components. No additional

hours will be awarded beyond the 135 hours. 6.00 Credits. 3 credits allocated to didactic/course work and 3 credits allocated to practice experience.

This requirement must be completed through Excelsior University.

Delivery: Online course delivered over 15 weeks.

### **NUR 686 The Nursing Informatics Capstone**

**6 credits**

*Prerequisites: Active and unencumbered RN license. Capstone is the last course taken, and all major core courses must be completed prior to beginning the capstone. Students can only take an elective or concentration course with the capstone.*

The graduate nursing capstone is a culminating experience designed to provide learners with an opportunity to apply knowledge and skills acquired throughout the program of study focusing on the competencies of the graduate level nurse. This 6-credit course consists of several integrated components: discussion, reflective journal, scholarly paper, 247.5 practice experience hours, and project presentation. Assessment of program competencies is built into these components. No additional hours will be awarded beyond the 247.5 hours. This requirement must be completed through Excelsior University.

This requirement must be completed through Excelsior University.

Delivery: Online course delivered over 15 weeks.

### **PBH 592 Biostatistics**

**3 credits**

To succeed in the public health field, the ability to understand and apply basic statistical methods commonly used in the design and analyses of biomedical and public health investigations is essential. The major topics covered in this course include types of data, study designs, probability, hypothesis testing, power, and sample size. Emphasis is placed on applying appropriate statistical methods, interpreting the results across public health environments, and communicating effectively with diverse stakeholders.

Students not in the Public Health Concentration may take HSC 580 Research and Applied Statistics instead of this course.

### **PBH 603 Behavioral Health and Social Environment**

**3 credits**

This course provides students an opportunity to examine theories, concepts, and models from the social and behavioral sciences, as they form the basis for health education and public health interventions on a variety of levels. Models of individual and interpersonal health behavior are examined, as well as community and group models of health behavior change. This course also addresses the emerging use of technology and social media in behavioral health interventions.

### **PBH 604 Epidemiology**

**3 credits**

Epidemiology has long been an integral part of disease prevention and treatment interventions. Recent pandemics have spurred interest in understanding how disease spreads and how to stop the spread. Epidemiology provides valuable insights into what makes people healthy, chronic disease prevention, and a base of evidence to create and test interventions. In this course, you will develop an understanding of disease etiology and surveillance strategies. You will learn how to use data to identify trends in morbidity and mortality, as well as how this data can inform public health policy and best practices.

### **PBH 609 Critical Issues in Public Health**

**3 credits**

This course examines emerging population-based issues, changing public health policies, and contemporary public health concerns. Students explore current public health issues within the context of their impact on regional, national, and global populations. Critical issues discussed include natural and man-made disasters, food and environmental safety, veterans' health, infectious and chronic diseases, human rights violations, and more.

### **PBH 610 Environmental Health**

**3 credits**

Where we live, work, and play matters deeply in the health of a community. This course provides you with an opportunity to critically examine environmental health issues, contributing factors, and promising approaches that can be taken to improve the health of environments. You will explore factors that impact on air, water, land, and climate. This course will delve deeply into the intersects of health, environment, and social justice throughout the term. Policies that impact the safety of communities will be explored through a sociopolitical lens. Over this term, you will have several opportunities to identify, research, and propose strategies to address environmental issues of interest to you.

### **PBH 613 Program Planning and Evaluation for Public Health**

**3 credits**

This course examines the history and development of health promotion programs as they impact the health of populations. Students hone their skills in applying theory to design, implement, and evaluate programs that competently address cultural, psychological, and behavioral factors impacting public health outcomes.

### **PBH 647 Vulnerable Populations**

**3 credits**

In this course, students explore the meanings of health and vulnerability at the community and societal levels as well as the factors that contribute to differential access to health care. Selected theories and models for identifying and addressing underlying causes of vulnerability are explored, using social justice as a guiding ethical framework and the lens for viewing controversies, political debates, and opportunities for policy and practice change.

### **SUST 601 Environmental Sustainability**

**3 credits**

Environmental Sustainability covers ecological principles by which life on Earth functions and human life and culture are sustained. The knowledge and skills covered enable students to recommend actions and policies needed to address climate change, planetary boundaries, threats to biodiversity, urban environments, agricultural systems, toxics and non-renewable resources, and related issues. The course experience prepares students for developing interdisciplinary skills and strategies for personal growth as well as leading people, businesses, and organizations through the challenges of the global ecological crisis.

### **SUST 602 Sustainability Science**

**3 credits**

This course provides students with a broad introduction to sustainability, including how we got to where we are, current trends, and proven strategies. The course focuses on navigating today's complex problems with interdisciplinary integration of environmental, social, and economic perspectives. Core principles of sustainability presented include justice, equity, diversity, and inclusion (JEDI). Students explore ways to incorporate diverse values, including indigenous wisdom, to create a transformational future that is environmentally sustainable, socially just, and spiritually uplifting. The course focuses on the community level, and students learn about and engage with people and their lived experiences with sustainability issues. The course surveys the ever-expanding field of sustainability science from a variety of perspectives, including government, business, academia, and agriculture. Students investigate the environmental, socioeconomic, and cultural elements that created current conditions and trends, and a range of case studies in sustainable resource management are presented through student field visits and discussions with sustainability practitioners. Topics include sustainability measurement and tracking, application of sustainability technology, resource use, living systems, systems thinking to trace and solve problems, and the interconnectivity of sustainability problems. The course also considers the role of human behavior in overcoming impediments to progress.

### **SUST 603 Environmental Leadership and Strategic Sustainability**

**3 credits**

Environmental Leadership and Strategic Sustainability explores the connections between leadership, sustainability, and strategic planning. The knowledge and skills empower leaders to develop and implement strategies with sustainability in mind. Abundant, effective leadership is a key ingredient to sustainability implementation at every scale, from global change to local, project-scale efforts. By the end of the course, students develop the skills to create strategic action plans to lead their organization into its future through ethical operations.

# Tuition and Fees

Descriptions of tuition and fees are located on the Excelsior University website at <https://www.excelsior.edu/costs-and-financing/>.

- ▶ **Undergraduate program tuition and fees**  
<https://www.excelsior.edu/costs-and-financing/undergraduate/>
- ▶ **Associate in Nursing tuition and fees**  
<https://www.excelsior.edu/costs-and-financing/associate-in-nursing-tuition-and-fees/>
- ▶ **Graduate program tuition and fee information**  
<https://www.excelsior.edu/costs-and-financing/graduate/>
- ▶ **Tuition and fees for military members**  
<https://www.excelsior.edu/costs-and-financing/military/>
- ▶ **Tuition and fees for military veterans**  
<https://www.excelsior.edu/costs-and-financing/veterans/>

# Financial Aid

Programs and services to help with affordability are presented on the **Tuition and Financial Aid webpage** at <https://www.excelsior.edu/costs-and-financing/>.

Student policies regarding financial aid are located on the website. The Satisfactory Academic Progress policy provides the minimum grades and standards considered satisfactory, conditions for interruption due to unsatisfactory grades or progress; a description of the probationary period, if applicable; and conditions of re-entrance for those students suspended for unsatisfactory progress.

Excelsior University offers a variety of financial aid options to assist eligible students in meeting their educational expenses. Students can access, apply for, and manage financial aid through Excelsior's online financial aid system, which provides clear and accurate information about available federal, state, and institutional programs, as well as students' rights, responsibilities, and any obligations associated with accepting financial assistance—including repayment requirements for student loans received—in accordance with relevant federal and state law and regulations.

In addition, Excelsior University provides access to Scholarship Universe, an online platform that connects students with both Excelsior-funded and external scholarship opportunities based on individualized profiles and eligibility criteria. This tool streamlines the process of identifying and applying for scholarship funding.

Excelsior is committed to ensuring that all financial assistance information presented to prospective and enrolled students is transparent, reliable, and compliant with relevant federal and state standards for fair consumer practices.

# Academic Support Services

Excelsior University offers many academic support services, most of which are always available to students, from admission to graduation.

- ▶ **The Online Writing Lab (OWL):** The Excelsior OWL provides multifaceted support for writers at the college level by providing reference information, exemplars, activities, quizzes, and videos.
- ▶ **Tutoring Services:** Students can meet with a live tutor, submit a paper to the Writing Lab for review, ask a question and receive a written reply, receive tutoring in Spanish, and chat with a tutor in their native language.
- ▶ **The Excelsior University Library:** All enrolled students have access to the Excelsior library via the MyExcelsior portal and the main navigation menu of all Canvas courses.
- ▶ **Accessibility Services:** Excelsior University is committed to the principle that every individual will have an equal opportunity to participate in a degree program, holistically aligning their academic, personal, and professional aspirations toward gaining knowledge, experiences, connections, skills, and competencies under appropriate conditions to complete a degree and reach goals. We provide reasonable accommodations for individuals with disabilities recognized under the Americans with Disabilities Act of 1990 (ADA). The provision of aids and modifications allows access to all students with disabilities. Detailed information regarding the process to request accommodations can be found on our website at <https://www.excelsior.edu/support-resources/accommodations/>.
- ▶ **Orientation and Advisement:** Excelsior offers online orientation courses and resources in the MyExcelsior portal as well as personalized, on-demand communication between students and academic advisors or other qualified staff.
- ▶ **Counseling and Support Services:** Excelsior partners with ComPsych to use qualified and trained ComPsych staff to provide on-demand, customized student support in potentially serious situations, as well as support for students in non-acute situations, who may need referrals to services for mental-health counseling, life coaching, legal support, financial advisement, etc. Services are provided at no cost to the student.

# Excelsior University

## Student Complaints Process

### Student Complaints, Appeals, and Exceptions

This policy provides students with a fair process to address their concerns, complaints, and appeals, or to request an exception to policy. Students have the right to a fair process in which to address their grievances on academic and non-academic issues through the process of submitting a student appeal.

Academic appeals may be requested for (a) final grades; (b) re-enrollment; (c) administrative withdrawals; (d) academic clean slate; (e) satisfactory academic progress; (f) academic integrity; and (g) course repeats.

Non-academic appeals may be requested for (a) tuition refunds above and beyond the normal refund policy; (b) medical/personal leaves of absence; (c) military active-duty deployment extensions; (d) course extensions due to military deployment; and (e) military withdrawals (MW) from courses due to military deployment.

Any student who has a complaint with a university employee, department, school, or process is encouraged to resolve the concern first through direct communication with the individual or department involved.

ADA accommodation appeals are outside the scope of this policy. See the [ADA Accommodations for Students policy and procedure](#).

#### Procedure

Any student who has a concern with an Excelsior employee, department, school, or process is encouraged to resolve the concern first through direct communication with the individual or department involved.

#### Appeals

If the issue cannot be resolved, an appeal may be submitted. The nature of the appeal determines which office reviews the appeal.

#### Academic Appeals

Students must submit an appeal in writing via email to the Student Support team at [studentsupport@excelsior.edu](mailto:studentsupport@excelsior.edu). Additional information or documentation relevant to the appeal may be required.

- ▶ Receipt of appeal letters will be acknowledged within three (3) calendar days.
- ▶ Appeals shall be reviewed and decisions rendered within 30 days of receipt of a completed student appeal, unless otherwise notated by a specific policy.
- ▶ Appeal decisions shall be documented in SIS. All documentation pertaining to the appeal must be scanned into the student file in SIS and appropriate staff will be notified.

Continued on next page

## Non-Academic Appeals

Non-academic appeals may be submitted in writing to the Ombudsperson at [ombudsperson@excelsior.edu](mailto:ombudsperson@excelsior.edu) for the following items:

- ▶ tuition refunds above and beyond the normal refund policy
- ▶ medical/personal leaves of absence
- ▶ military active-duty deployment extensions
- ▶ course extensions due to military deployment
- ▶ military withdrawals (MW) from courses due to military deployment

## Appeals—Further Information

A student who is not satisfied with the formal complaint, appeal, or exception resolution may submit their complaint or appeal in writing to the provost at [provost@excelsior.edu](mailto:provost@excelsior.edu).

## Notification to Accrediting Agency

A student who is not satisfied with the resolution provided by the University may file a written complaint with the University's accrediting agency, the Middle States Commission on Higher Education. Complaints to the Commission must be in writing and signed by the complainant.

They should be sent to:

**President**

**Middle States Commission on Higher Education**  
3624 Market Street, Philadelphia, PA 19104-2680

## Notification to State Authorities

A student may also file a complaint with the appropriate state agency within the state in which the student resides. A list of contact information for the appropriate state agencies is available on the University's website at [www.excelsior.edu/policy/consumer-complaint-process](http://www.excelsior.edu/policy/consumer-complaint-process).

[New York State Education Department's Complaint Procedures](#)

## Notification to the State Authorization Reciprocity Agreement (SARA)

As an institution participating in the State Authorization Reciprocity Agreement (SARA), students residing in SARA states/territories may contact our home state SARA State Portal Entity (New York State Education Department) to file a complaint if resolution is not found within the institution. However, students cannot file complaints relating to grades or student conduct violations.

Information can be found on our website at:

[www.excelsior.edu/about/transparency/state-authorization-reciprocity-agreement-sara-disclosures/](http://www.excelsior.edu/about/transparency/state-authorization-reciprocity-agreement-sara-disclosures/).

Continued on next page

# State Authorization Reciprocity Agreement (SARA) Student Complaint Process

Excelsior University has been approved by the New York State Education Department to participate in the [State Authorization Reciprocity Agreement \(SARA\)](#). The National Council for State Authorization Reciprocity Agreements (NC-SARA) welcomed Excelsior University to officially join the initiative effective January 5, 2017. SARA is a voluntary agreement among member states, districts, and territories that establishes national standards for interstate offering of distance education courses and programs. This Agreement is intended to make it easier for students to take online courses offered by postsecondary institutions based in another state.

## SARA Student Complaint Process

Students, or prospective students, must first attempt to resolve a complaint within Excelsior by following the Excelsior University [student complaint process](#).

Pursuant to the State Authorization Reciprocity Agreements Policy Manual Section 4.5(c), “If a person bringing a Complaint is not satisfied with the outcome of the institutional process for handling Complaints, the Complaint (except for Complaints about grades or student conduct violations) may be appealed, within two years of the incident about which the Complaint is made, to the SARA portal entity in the home state of the institution against which the Complaint has been lodged. That SARA State Portal Entity shall notify the SARA State Portal Entity for the State in which the student is located of receipt of that appealed Complaint.” Typically, the state portal entity is that state’s education department or agency. Visit the [NC-SARA SARA Student Complaints Process page](#). Additional information relating to SARA’s complaint resolution policies and procedures can be found in the [SARA Policy Manual](#).

As mentioned above, note that SARA policies do not cover complaints related to grades or student conduct violations and students have two years to submit complaints to [NYSED](#).

In the unlikely event that students believe their complaint is not resolved by the methods outlined in Excelsior’s publications, they may appeal to the following SARA/Non-SARA portal agencies:

Full-time Faculty, English and Composition,  
College of Liberal Arts and Sciences,  
Excelsior University, Albany, NY

JENNIFER RUFFIN, MSc  
*Medical Technology, SUNY Upstate  
Medical University, Syracuse, NY*  
Full-time Faculty, Biology and Science, College of Liberal  
Arts and Sciences, Excelsior University, Albany, NY

LEAH SCIABARRASI, PhD  
*Interdisciplinary Studies,  
Union Institute and University, Cincinnati, OH*  
Associate Dean of Business,  
College of Liberal Arts and Sciences  
Excelsior University, Albany, NY  
Liberal Arts and Sciences, Excelsior University, Albany, NY

JAMES E. TIPPEY JR., DCS  
*Computer Science, Colorado Technical  
University, Colorado Springs, CO*  
Associate Dean of Technology,  
College of Liberal Arts and Sciences,  
Excelsior University, Albany, NY

# Excelsior University College of Nursing and Health Sciences Faculty

KYLIE ACKERMAN, MSN-ED, MSN-I, RN, CNEN  
(Nursing Education, Excelsior University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

DANIELLE BEASLEY, PhD, RN, RNC-OB, CNE  
(Nursing Science, University of Florida)  
*Department Chair, Bachelor's and  
Master's Degree in Nursing, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

AMI BHATT, PhD, DNP, MBA, RN  
(Nursing, Barry University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

TONYA BOYD, DNP, MSN, RN, APRN, GNP-BC  
(Nursing Practice, Aspen University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

TRACY CAMPBELL, DNP, MSN-Ed, RN  
(Nursing Education, Wake Forest School  
of Medicine-Academic Nursing)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

RAFAEL CAYCHO, PhD, MHA  
(Health Services—Healthcare Administration,  
Walden University)  
*Full-time Faculty, School of Allied Health,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

MARY ANN R. GARCIA, DNP, MSN, RN, CNE  
(Healthcare Management, Chamberlain University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

ROBIN S. GOODRICH, EdD, RN  
(Doctor of Education, Columbia University)  
*Purnell Executive Dean,  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

BRITTNEY HARRIS, EdD  
(Doctor of Education, Liberty University)  
*Full-time Faculty, School of Allied Health  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

CAITLYN HOLLOWAY, DNP, RN, CCRN-CMC, PCCN, TCRN  
(Doctor of Nursing Practice,  
The George Washington University)  
*Department Chair—Clinical Academics,  
School of Nursing, College of Nursing and Health  
Sciences, Excelsior University, Albany, NY*

KAITLIN KNIGHT, MSN, RN, PCCN-K  
(Nursing Education, Sacred Heart University)  
*Nursing Skills Lab Instructor, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

TISHA LeCOUVE, DNP, RN  
(Nursing Leadership, Aspen University)  
*Department Chair, School of Nursing  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

KRISTINA MCCALL, PhD, RN  
(Nursing Education, Walden University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

BROOKE MORFORD, PsyD  
*Clinical Psychology, Argosy University, Dallas, TX  
Department Chair, School of Allied Health,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

ANGELA OWENS, DNP, RN, PCC, CMC  
(Doctor of Nursing Practice,  
Chamberlain College of Nursing)  
*Associate Dean, School of Nursing,  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

PATRICK PALMIERI, DHSc, EdS, PGDip, MBA, MSN,  
ACNP, RN, CPHRM, CPHQ, FFMRCIS, FAAN  
(Health Science, A.T. Still University,  
Arizona School of Health Sciences, Mesa, AZ)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

BRIAN PERVIS, DNP, MSN, APRN, AP-PMN, PGM-  
BC, GERO-BC, WCC, FNP-C, DAPWCA  
(Doctor of Nursing Practice, Capella University)  
*Department Chair, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

DIANE PYTLIK-FLAMMIA, DHA, MSN, RN  
(Health Administration, University of Phoenix)  
*Dean, School of Nursing,  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

TONI ZAPPULLA, DNP, MSN-ED, RN  
(Doctor of Nursing Practice, Chamberlain University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

KRISTY ROWLEY, DNP, MSN-Ed, RN  
(Nursing Education, Western Carolina University)  
*Department Chair, Associate Degree, School of Nursing,  
College of Nursing and Health Sciences  
Excelsior University, Albany, NY*

KATHLEEN RUPP, PhD, MSN, RN, CNE  
(Nursing, University of Phoenix)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

ALEXA YABUT-CORSO, DNP, MSN-ED, RN, CPAN, CAPA  
(Doctor of Nursing Practice, Chamberlain University)  
*Full-time Faculty, School of Nursing,  
College of Nursing and Health Sciences,  
Excelsior University, Albany, NY*

## Advisory Board to the Excelsior University College of Nursing and Health Sciences

BEVERLY BONAPARTE, PhD, ANP, RN, FAAN  
*President,  
International Nursing Solutions, LLC*

JONATHAN GREEN, DNP, MBA, RN, FACHE  
*Senior Director of Nursing,  
Montefiore Medical Center, Bronx NY*

ROBIN GOODRICH, EdD, RN  
*Purnell Executive Dean,  
Excelsior University, Albany, NY*

STEPHANIE PO CZOS, EdD  
*Vice Provost, Academic Operations & Quality,  
Excelsior University, Albany, NY*

LARRY PURNELL, AD, BSN, PhD  
*Consultant, Sudlersville, MD*

PAUL H. SHIFFMAN, EdD  
*Consultant, Education Public Policy  
Highland Heights, OH*

JULIE SIEMERS, DNP, MSN, RN  
*Consultant, Austin, TX*

PAMELA SLATTERY, MS, RN  
*Education Specialist,  
Albany Medical Center Hospital, Albany, NY*

# Addendum for Florida Students

Excelsior University is a not-for-profit higher education corporation governed by a board of trustees. The names and titles of the trustees, as well as the administrative and academic leadership of the institution, is included in each catalog.

Licensed by the Commission for Independent Education, Florida Department of Education. Additional information regarding this institution may be obtained by contacting the Commission at 325 West Gaines Street, Suite 1414, Tallahassee, FL 323099-0400, toll-free telephone number: (888) 224-6684.

## Excelsior University Florida Degree Programs

Program Title	Credential	Degree Type	Credit Hours	S/Q
Administrative & Management Studies	Associate in Applied Science	AAS	60	S
Business Administration	Master's	MBA	33	S
Business Management	Bachelor's	BS	120	S
Cybersecurity	Bachelor's	BS	120	S
Cybersecurity	Master's	MS	30	S
Electrical Engineering Technology	Bachelor's	BS	124	S
Health Care Management	Bachelor's	BS	120	S
Healthcare Administration	Master's	MS	36	S
Management	Master's	MS	30	S
Nursing	Bachelor's	BS	121	S
Nursing—Prelicensure	Bachelor's	BS	120	S
Nursing Education	Master's	MS	38	S
Nursing Informatics	Master's	MS	36	S
Nursing Leadership Administration of Healthcare Systems	Master's	MS	38	S
Organizational Leadership	Master's	MS	30	S

The names and titles of all full-time and part-time administrators can be found in the Excelsior University catalog in the section Excelsior University Leadership Staff. In addition to this list of institutional and academic leadership, administrators include:

- ▶ Toni-Ann Funk, Executive Director of Admissions
- ▶ Chris Johnson, Executive Director of Student Affairs

- ▶ The Excelsior University academic calendar is available on our website at <https://www.excelsior.edu/calendars/academic/>.
- ▶ Admissions requirements, policies, and procedures are available at:
  - ▶ <https://www.excelsior.edu/admissions/requirements/>
  - ▶ <https://www.excelsior.edu/policy/enrollment-and-matriculation/>
  - ▶ and <https://www.excelsior.edu/policy/language-proficiency/>
- ▶ The [Transfer and Evaluated Sources of Credit policy](#) governs the granting of credit for prior learning or by examination, including the maximum amount of credit which can be obtained in this manner.
- ▶ Please note that the transferability of credit from Excelsior University is at the discretion of the accepting institution, and that it is the student's responsibility to confirm whether or not credits will be accepted by another institution of the student's choice.
- ▶ The Excelsior University Course Numbering System is as follows:
  - ▶ **0–99** Remedial/Developmental
  - ▶ **100–299** Lower-level undergraduate credit
  - ▶ **300–499** Upper-level undergraduate credit
  - ▶ **500 and above** Graduate credit
- ▶ Excelsior University uses the following grading system:
 

A = 4.0	I = Incomplete
B = 3.0	P = Pass
C = 2.0	W = Withdrawal
D = 1.0	AW = Administratively Withdrawn
F = 0.0	MW = Military Withdrawal
	R = Repeated
	O = Repeated at Another Institution

Letter grades are assigned for Excelsior University courses that are based on percentage equivalents. The course grade equivalents are as follows:

- A = 90–100%
- B = 80–89%
- C = 70–79%
- D = 60–69%
- F = 59% or below

  - ▶ Tuition and fees for military members: <https://www.excelsior.edu/costs-and-financing/military/>
  - ▶ Tuition and fees for military veterans: <https://www.excelsior.edu/costs-and-financing/veterans/>
- ▶ Programs and services, for those who qualify, to help with are presented on the Tuition and Financial Aid webpage at <https://www.excelsior.edu/costs-and-financing/>.
- ▶ The [Add Drop, Cancel, Withdrawal, and Refunds for Excelsior University Courses policy](#) addresses refunds and related topics.
- ▶ Excelsior University has multiple corporate office buildings comprising our on-campus property located at 3, 5, and 7 Columbia Circle, Albany, NY 12203.
- ▶ In addition to the Cornerstone course for undergraduate students, Excelsior University offers many academic support services, most of which are available to students at all times, from enrollment to graduation.
  - ▶ **The Online Writing Lab (OWL):** The Excelsior OWL provides multifaceted support for writers at the college level by providing reference information, exemplars, activities, quizzes, and videos.
  - ▶ **Tutoring Services:** Students can meet with a live tutor, submit a paper to the Writing Lab for review, ask a question and receive a written reply, receive tutoring in Spanish, and chat with a tutor in their native language.
  - ▶ **The Excelsior University Library:** All enrolled students have access to the Excelsior library via the MyExcelsior portal and the main navigation menu of all Canvas courses.
  - ▶ **Accessibility Services:** Excelsior University is committed to the principle that every individual will have an equal opportunity to participate in a degree program, holistically aligning their academic, personal, and professional aspirations toward gaining knowledge, experiences,

Continued on next page

connections, skills, and competencies under appropriate conditions to complete a degree and reach goals. We provide reasonable accommodations for individuals with disabilities recognized under the Americans with Disabilities Act of 1990 (ADA). The provision of aids and modifications allows access to all students with disabilities. Detailed information regarding the process to request accommodations can be found on our website at <https://www.excelsior.edu/support-resources/accommodations/>.

- ▶ **Orientation and Advisement:** Excelsior offers online orientation courses and resources in the MyExcelsior portal as well as personalized, on-demand communication between students and academic advisors or other qualified staff.
- ▶ **Counseling and Support Services:** Excelsior partners with ComPsych to use qualified and trained ComPsych staff to provide on-demand, customized student support in potentially serious situations, as well as support for students in non-acute situations, who may need referrals to services for mental-health counseling, life coaching, legal support, financial advisement, etc. Services are provided at no cost to the student.
- ▶ **Career Readiness:** Excelsior University provides career readiness assistance to students and program graduates. Excelsior's career readiness services help students prepare to be career-ready and to achieve their professional goals. Career readiness services include valuable career discovery, exploration, and planning advice as well as access to job opportunities that students may apply for. Excelsior University does not guarantee job placement to students upon program completion/graduation, nor does it make any promise as to specific market conditions or job availability. Excelsior University discloses certain historical information on placement and gainful employment, including data that is required to be disclosed by applicable law, but nothing about that data promises or implies that similar results are guaranteed.
- ▶ The [Student Conduct and Conflict Resolution policy](#) presents Excelsior's expectations for student conduct.
- ▶ The [Student Complaints, Appeals, and Exceptions policy](#) informs students of the procedures to appeal academic or disciplinary actions.
- ▶ The [Student Complaints, Appeals, and Exceptions policy](#) informs students of the procedures Excelsior University will follow to consider and address student complaints.
- ▶ The [Transfer and Evaluated Credit Sources policy](#) governs the granting of credit for prior learning or by examination, including the maximum amount of credit which can be obtained in this manner.
- ▶ **Refund Policy:** Students who wish to withdraw from a course may be eligible for a refund of tuition in accordance with the conditions outlined in this policy. The Excelsior University refund policy for students from the State of Florida is administered by the Student Accounting Office. Questions related to the refund conditions contained in the refund policy for students from the State of Florida or questions related to a specific refund should be addressed by contacting the Student Accounting Office. The Student Payment Office can be reached by telephone by calling 1-888-647-2388.

In the event a student withdraws from an Excelsior University course, then the following refund provisions apply:

Continued on next page

## Florida Refund Policy

### Florida 8-Week Course (Refund up to day 23)

Days 1–7	100% Refund
Days 8–11	80% Refund
Days 12–23	50% Refund
Day 24 and on	No Refund

### Florida 15-Week Course (Refund up to day 42)

Days 1–11	100% Refund
Day 12–19	80% Refund
Day 20–42	50% Refund
Day 43 and on	No Refund

If the student drops course(s) any time up to the seventh day of an 8-week course or up to the eleventh day of a 15-week course, they will receive a full refund. The student will receive a partial refund as specified above provided they withdraw prior to the twenty-third day of an 8-week course and forty-second day of a 15-week course. The student understands that if they are a financial aid recipient and they withdraw from their course(s), they are subject to and responsible for repaying the applicable Return of Title IV Fund calculation.

In the event the University cancels a course, the student will be refunded 100% of the tuition paid for the course. All refunds will be made within 30 days of withdrawal from the course or cancellation of the course.

These refund provisions apply to students from the State of Florida admitted/enrolled in the following Excelsior University programs:

- ▶ Associate in Applied Science in Administrative/Management Studies
- ▶ Bachelor of Science in Business Management
- ▶ Bachelor of Science in Cybersecurity
- ▶ Bachelor of Science in Electrical Engineering Technology
- ▶ Bachelor of Science in Health Care Management
- ▶ Bachelor of Science in Nursing—Prelicensure
- ▶ RN to Bachelor of Science in Nursing
- ▶ Master of Science in Business Administration
- ▶ Master of Science in Cybersecurity
- ▶ Master of Science in Health Care Administration
- ▶ Master of Science in Management

Continued on next page

- ▶ Master of Science in Nursing Education
  - ▶ Master of Science in Nursing Informatics
  - ▶ Master of Science in Nursing Leadership and Administration of Health Care Systems
  - ▶ Master of Science in Organizational Leadership
- ▶ Excelsior University is located at 9400 4th Street North in St. Petersburg, Florida. The St. Petersburg site is designed as a training facility for nursing students and houses teaching and learning facilities. The facility is 8000 sq. ft., housing one large classroom, one computer laboratory and one large clinical laboratory, several smaller training rooms, general meeting areas, administrative offices, and abundant storage.
